

The location of my house and the location of the tree in front garden of the house is shown circled in the map above

Full view of the tree in front of the house

**Reduce laterals over the driveway by circa 2m.
The branches are fully covering the driveway and growing out
into the neighbours area**

**Closer view of the area to be pruned.
There are several dead branches and the pruning will not
compromise foliage cover of the stem**

Prune back branches extending over the house to previous pruning point, giving a clearance of about 2m from the roof

The previous pruning point is shown encircled.

Crown lift over the pavement to circa 2.5m
