Grown as Standard

Rootguard Barrier 'Terram Bamboo 420 UV 1.4m depth x 0.78 thick to be inserted on walling side of tree planting pit.

Yew Buttressing to form curved hedge from 1m near the path to 2m in height Containerized Stock to be used.

Tree planting pits to be square and lined on the walling side only with Rootguard Barrier 'Terram Bamboo 420 UV 1.4m depth x 0.78 thick . Pit to be backfilled to required depth for the specific containerised tree root size. This should be a minimum of 300mm wider and 300mm deeper than container of tree.

Trees should be double staked with cross spar and rubberised collar to prevent stem chafing.

All new trees to have a mulched zone around planting area to a depth of 75mm minimum, to keep moisture in and suppress competing vegetation and weeds. All planting areas within the garden are to be mulched with tree bark.

Circular metal edging to form a crisp barrier between the tree planted area and the gravel. Area to be mulched with bark to keep planted area from drying out and to suppress weeds.

Carpinus betulus Fastigiata
