Landscape Design Amendments

A telephone conversation with Sarah Hanson Natural Environment Officer regarding soft landscaping concerns has resulted in the following amendments being made to the Garden Design Support Document for Carlisle House.

- 1 The Maple trees are now referred to as Sycamores.
- 2 The Tree Pit specification has been clarified.
- 3 The variegated Tulip tree which is a smaller cultivar than the species, has been moved further away from the eastern boundary wall with the Holy Trinity Church.
- 4 Water Butts are to be installed as the primary watering system and are to be situated at any RWPs that are not being used as water drainage from the courtyard terraces
- 5 Labelling of planting, numbers and quantities are on the planting plans.
- 6 Traditional Standard Hornbeam trees will be used instead of pleached specimens, to help mitigate the canopy loss of the Sycamores.
- 7 Two Tilia trees are to be planted in line with the adjacent trees of the Holy Trinity Church.
- 8 Mulberry tree to have a circular mulched area around it's base instead of lawn.
- 9 Quercus Ilex trees have always been intended to grow as standard, unclipped trees to provide adequate cover from unsightly buildings.
- 10 Tree pit specification and root barrier information has been expanded upon.
