

SuDSPlanterTM

A cleaner, greener way to manage
surface water sustainably.

Meet the SuDSPlanter

SuDSPlanter is a uniquely designed rain garden which captures rainwater runoff from roofs, rather than leaving it to flow into the drains and sewers, potentially overloading the system. It's a cleaner, greener more sustainable way to guard against today's increasing risk of flooding and contamination.

The SuDSPlanter provides water storage in dry or drought conditions, as well as storm storage designed to cope in wet environments. This makes the planter ideal for our changing weather patterns, combatting the increasing flood risk and water scarcity which we face.

How it works

The SuDSPlanter is designed to capture rainwater run-off from roofs by rerouting the downpipe into the planter instead of directly into the drains. The planter is made up of a series of layers, acting as both a sponge and a natural filter, attenuating flow and removing sediment and bird poo as the water soaks through to the reservoir below.

Our specially designed growing media provides the perfect environment for plants to thrive; nutrient and water retention, filtration and soil volume to sustain plant growth in both wet and dry conditions.

Our aim

When we set out to create SuDSPlanter our aim was to produce an environmentally sound flood mitigation device which would improve home owners' lives through urban greening and flood defence. This has developed into a product range which delivers a simple, retrofit solution to surface water for a variety of roof sizes to match any residential, commercial or educational environment. SuDSPlanter is brought to you by:

Lorna Davis

Specialist consultant in sustainable drainage for the engineering and water industry.

Alex Stephenson

Over 40 years of experience in drainage engineering and waste water solutions.

Proudly made in the UK

We pride ourselves in sourcing and assembling all of SuDSPlanters materials within the UK. Our manufacturing facility is based in Mid Wales, with carpenters crafting each product from scratch.
