Welcome

An introduction to this guide

Thank you for considering our range of light engine solutions. In this guide you will find in-depth technical information and guidelines, intended to help you select the right solution. So whether you're looking to retrofit LED into an existing luminaire or installing new products, this guide has been designed to support you during the design phase of your project.

Types of light engines

Performance LED light engine

	Description Modular LED light engine with high power LEDs and performance optics. Providing optimal efficacy and optical flexibility for maximised energy savings.
	Lumen range 300 – 25000lm
	Power range 4-198W
	Number of optics 23
	Distribution options A / B / C / D / Z Diamond+ optics available
	Colour temperature 4000K / 3500K / 3000K / 2700K
	Colour rendering index >70Ra (4000K) >80Ra (3500K / 3000K / 2700K)

Performance CoB light engine

	Description Chip on board (CoB) LED light engine, with a large silicone lens; providing performance lighting distributions from a single light source. Offers a highly efficient LED alternative where the aesthetic of a larger single light source, closer to the appearance of a lamp, is preferable to a multichip board.
	Lumen range 1590 – 9930lm
	Power range 17-55W
	Number of optics 4
	Distribution options A / B / C / D Diamond+ optics available
	Colour temperature 4000K / 3500K / 3000K / 2700K / 2200K
	Colour rendering index >65Ra (2200K) >70Ra (4000K) >80Ra (3500K / 3000K / 2700K)

Comfort CoB light engine

	Description Chip on Board (CoB) light engine providing low glare, symmetrical lighting distribution for pedestrian areas. Uses a special silicone optic that mimics a traditional lamp distribution and a glass dome refractor to minimise glare. For an authentic representation of a lamped lantern with all the benefits of LED.
	Lumen range 1000 – 3200lm
	Power range 12-39W
	Number of optics 1
	Distribution options Symmetric only
	Colour temperature 3000K / 2700K
	Colour rendering index >80Ra

Gas Effect light engine

	Description Braun® LED solutions, by DW Windsor, offer specifiers a traditional gas mantle aesthetic while harnessing the energy and maintenance saving benefits of LED.
	Lumen range 350 – 3500lm
	Power range 3-54W
	Number of optics 1
	Distribution options Symmetric only
	Colour temperature 3000K / 2700K
	Colour rendering index >85Ra

Performance LED light engine

Why choose Performance LED?

For maximum energy and maintenance savings.

Our Performance LED light engine utilises the same high power LEDs as our highly efficient Kirium Pro functional road lighting range. It also features the same precision optical system, Diamond+.

We have a number of different sized boards with varying quantities of LEDs offering huge lighting flexibility (the number boards which can be used in each of our luminaires is determined by the physical size of the lantern and its thermal capabilities).

Each board size has an LX designation (LX3, LX4 and LX6) and each of these can be furnished with different numbers of LEDs.

Optical distributions

Introducing Diamond+

Our Performance LED light engine offers a wide range of optical solutions for ultimate flexibility in scheme design and precise control of light distribution.

Retrofitting a DW Windsor lantern with LED

Use the below table to specify the Diamond+ Optic setting which most closely replicates your lantern’s existing distribution.

Old Optic	New Optic
A (5/35)	A3
B (10/10) & Footpath	B1
C (31/35) & Area	C1
D (5/25)	D2

Product lumen packages and wattages matrix

The same lumen packages can be achieved in a number of ways, dependant on your driving factors. For the lowest capital cost choose the fewest LEDs, run at a higher output. For the most efficient option, with reduced lifetime costs, choose more LEDs and run at a lower drive current.

The light engine data below is based on 4000K and is meant as a guide only. For accurate lumen outputs for specific lanterns, please download the photometry.

Number of LEDs		Drive current (mA)																
		200	250	300	350	400	450	500	550	600	650	700	750	800	850	900	950	1000

Performance CoB light engine

Why choose Performance CoB?

For performance LED lighting with a lamp aesthetic

Closer in appearance to a traditional lamp (as a single point light source).

The Performance CoB light engine offers impressive energy savings over traditional lamp technology within an aesthetic more in keeping with a heritage style lantern.

Optical distributions

Introducing Diamond+

Our Diamond+ optic system has been extended to include a number of lenses that can be used with CoB LEDs that offer very similar distributions to the Performance LED options.

Retrofitting a DW Windsor lantern with Performance CoB

Use the below table to specify the CoB Diamond+ Optic setting which most closely replicates your lantern's existing distribution.

Old Optic	New Optic
A (5/35)	AC1
B (10/10) & Footpath	BC1
C (31/35) & Area	CC1
D (5/25)	DC1

Light engine specifications

Product lumen packages and wattages matrix

Performance CoB is compatible with all traditional lanterns up to 1000mA.

The light engine data below is based on 4000K and is meant as a guide only. For accurate lumen outputs for specific lanterns, please download the photometry.

	Drive current (mA)							
	300	400	500	600	700	800	900	1000
lm	3215	4231	5242	6235	7213	8142	9060	9933
W	17	23	28	33	38	44	50	55

Colour temperature

In order to account for the reduction in lumen packages caused by warmer colour temperatures, the following reduction factors can be applied to the base lumen packages;

Colour temperature	Light output reduction factor
4000K	1.0
3000K	0.95
2700K	0.90

Comparable products for HID replacements

The table below gives guideline options for narrowing down potential one-for-one replacement options for standard lamp type solutions.

Lamp type	Connected load	Lamp lumens	Approx comparable LED lumens*		Performance CoB alternative			Energy saving

5,000	650mA	600mA	550mA
7,000	950mA	900mA	800mA

Comfort CoB light engine

Why choose Comfort CoB?

Comfortable, efficient lighting appropriate for residential and pedestrian applications

Again featuring the energy efficiency and aesthetic benefits of Chip-on-Board LED we use a glass bowl refractor and a special symmetric lens to obscure the light source from view providing efficient yet soft, glare free lighting for pedestrian scale applications such as public realm spaces, parks and residential roads.

Optical distributions

Introducing comfortable LED lighting

For residential areas and pedestrian spaces, the Comfort CoB light engine provides soft, low glare lighting.

Braun Gas Effect light engine

Why choose Braun Gas Effect?

For the ultimate in authentic heritage lighting

Braun LED solutions, by DW Windsor, offer specifiers a traditional gas mantle aesthetic whilst harnessing the energy and maintenance savings of LED. Due to the specialist nature of this light engine, please call DW Windsor to help create a bespoke solution for your project.

Gas mantles

The gas effect light engine can be supplied with 1, 2, 3, 4 or 6 gas mantles. With the ability to be run at different drive currents, a lumen output range of 350 – 3500lm can be achieved.

Quality of light

To emulate the warmth of natural flame, ensuring all aspects of the light engine are authentic, the gas effect light engine is available with colour temperatures of 2700K and 3000K, both with a high CRI of 85Ra.

Control

The gas effect light engine can be switched by normal photocell, supplied with part-night or pre-programmed dimming, or be integrated into a CMS or Smart City system for ultimate flexibility.

Aesthetic additions

To complete the heritage aesthetic, we can supply columns complete with ladder bars and timer boxes, or even a replica gas timer to be mounted within the lantern itself (as shown below).

Technical data

Photometry

Understanding photometric data

DW Windsor has recently simplified our photometric data codes. All photometry now features a consistent naming format: to give designers detailed product information within the code itself.

Product	Light engine	Colour temperature	Optic	Drive current	UMSUG Code
Windsor Street	LX6 - 16 LED	3K	A1	350mA	UMSUG 42 0012 0000 100

S/P ratios

What is an S/P ratio?

Our eyes respond differently at daytime and night-time lighting levels. These are commonly referred to as Photopic (day) and Scotopic (night) responses. For any artificial light source, the ratio between these outputs is fixed and independent of the intensity of that source.

When utilising LED light sources for street lighting applications, new lighting standards allow for a reduction in the illumination levels required to meet the same perceived light level. The level of illumination required on subsidiary roads and paths may be reduced if the light source has a colour rendering index of 60Ra or higher.

Following SP ratios apply;

Light engine	2700K	3000K	4000K
Performance LED	1.2	1.2	1.5
Performance CoB	1.2	1.2	1.5
Comfort CoB	1.2	1.2	n/a

UMS Codes

UMS codes are available for the full light engine range, see below or download online [here](#)

Elaxon have recently introduced a new system of generic codes, specifically for LED products. Learn more about the new 42 charge codes [here](#)

Understanding CE Certification

CE Marking

The CE mark is a requirement for products that are offered for sale on the European market, it indicates that the product meets EU safety, health and environmental regulations.

Manufacturers are required to perform the following actions for CE compliance:

- Undertake a conformity assessment
- Issue the EC Declaration of Conformity (DoC)
- Place CE marking on a product

Last year the rules covering the application of CE marks were changed to state that;

“A product, which has been subject to important changes or overhaul aiming to modify its original performance, purpose or type after it has been put into service, having a significant impact on its compliance with Union harmonisation legislation, must be considered as a new product.”

“If the product is to be considered as new, this person becomes the manufacturer with the corresponding obligations. Furthermore, in this case the conclusion is that it is a new product, the product has to undergo a full conformity assessment before it is made available on the market.”

What does this actually mean?

Any person offering a retrofit gear tray onto the market must ensure that the complete product is re-tested in accordance with the standards and regulations before affixing a CE mark.

In other words, third parties cannot offer a gear tray for retrofit into our lanterns, without invalidating the warranty and unless they have taken each type of lantern, re-tested it and can provide the required documentation as detailed above.

Below is a list of requirements for CE marking and self-assessment to be carried out on each type of product that a retrofit gear tray may be installed into:

- Conformity tests – EMC testing / Photometry / UMSUG coding etc
- Produce instructions and safety information
- Keep technical documentation for 10 years after product has been placed on market
- Manufacturers name and contact details
- Affix CE label
- Certify product and quality system
- Correct labelling to allow for identification

Due to continuous product development the details within this brochure are subject to change at any time, please contact us for the most up-to-date information or visit: dwwindsor.com
