1 EXECUTIVE SUMMARY

- 1.1.1** John Wenman Ecological Consultancy LLP was commissioned by Turner Property to undertake a bat survey at 2 Sidmouth Street – a residential property in Reading, Berkshire. The survey was commissioned to accompany a planning application to be submitted to Reading Borough Council seeking consent for the erection of a two-storey side and front extension, and the addition of a dormer window.
- 1.1.2** The survey followed a preliminary bat roost assessment undertaken by John Wenman Ecological Consultancy LLP on 24th January 2022 (Reference: R3021a). Approximately 75 – 100 small-sized bat droppings, resembling those typically deposited by a pipistrelle species (*Pipistrellus* spp.) were found at the party wall within the roof void. Externally, the house had potential crevice roost features for crevice-dwelling bats, such as the pipistrelles (*Pipistrellus* spp.) and small *Myotis* species, in the form of gaps under the hip and ridge tiles. Further survey was recommended to characterise the roost and to determine if any other species/roosts are present.
- 1.1.3** Emergence surveys were carried out on the 7th and 21st June 2022 and a re-entry survey was carried out on the 5th July 2022; no bats were observed emerging from the property or returning to roost in the property.
- 1.1.4** The survey data shows that the proposals are unlikely to result in bat roosts being damaged or destroyed, or to bats being disturbed. As such, a European Protected Species Mitigation Licence is not required for the planned works to go ahead lawfully. Due to the mobility of bat roosts, the area where the droppings were found will be soft stripped under the supervision of a licensed ecologist and a non-licensed method statement adhered to during construction. In the long-term, an integral bat box will be incorporated into the newly extended property to ensure that roosting opportunities are maintained.

2 INTRODUCTION

2.1 Background

2.1.1 John Wenman Ecological Consultancy LLP was commissioned by Turner Property to undertake a bat survey at 2 Sidmouth Street – a residential property in Reading, Berkshire (Grid reference: SU 72023 73291). The survey was commissioned to accompany a planning application to be submitted to Reading Borough Council seeking consent for the erection of a two-storey side and front extension, and the addition of a dormer window.

2.1.2 The survey followed a preliminary bat roost assessment undertaken by John Wenman Ecological Consultancy LLP on 24th January 2022 (Reference: R3021a). Approximately 75 – 100 small-sized bat droppings, resembling those typically deposited by a pipistrelle species (*Pipistrellus* spp.) were found at the party wall within the roof void. Externally, the house had potential crevice roost features for crevice-dwelling bats, such as the pipistrelles (*Pipistrellus* spp.) and small *Myotis* species, in the form of a gaps under the hip and ridge tiles.

2.1.3 In order to determine if roosting bats are present or are likely absent, and if present, to confirm the status and location of bat roosts and the mitigation strategy required, an emergence and re-entry survey was recommended; this report presents the findings and recommendations of the survey.

2.2 Legislative Background

2.2.1 All British bat species are fully protected by the Wildlife & Countryside Act 1981 (as amended) and by the Conservation of Habitats and Species Regulations 2017 ('Habitat Regulations') (as amended). In summary, the legislation combined makes it an offence to:

- Damage or destroy a breeding site or resting place or intentionally or recklessly obstruct access to a structure or place used for shelter by a bat;
- Deliberately, intentionally or recklessly disturb bats; in particular any disturbance which is likely to impair the ability of bats to survive, breed or reproduce or nurture their young; or in the case of hibernating or migrating bats, to hibernate or migrate; or to affect significantly the local distribution or abundance of the species;

John Wenman Ecological Consultancy
23/08/2022

- Deliberately kill, injure or take any bat.

2.2.2 The government's statutory conservation advisory organisation, Natural England, is responsible for issuing European Protected Species licences that would permit activities that would otherwise lead to an infringement of the Habitat Regulations. A licence can be issued if the following three tests have been met:

- **Regulation 55(9)(a)** - there is "no satisfactory alternative" to the derogation, and;
- **Regulation 55(9)(b)** - the derogation "will not be detrimental to the maintenance of the population of the species concerned at a favourable conservation status in their natural range" and;
- **Regulation 55(2)(e)** - the derogation is for the purposes of "preserving public health or public safety or other imperative reasons of overriding public interest, including those of a social or economic nature and beneficial consequences of primary importance for the environment".

2.2.3 Local authorities have a statutory duty under Regulation 7(3e) of the Habitat Regulations to have regard to requirements of the Habitats Directive in the exercise of their functions. The Council must therefore consider and determine whether these three tests are likely to be satisfied by applications where survey findings show that European Protected Species licensing is necessary before granting planning permission.

2.2.4 European Protected Species licence applications can be submitted once all necessary planning consents have been granted and Natural England aim to issue a licence decision within 30 working days.

2.2.5 Licensable projects affecting small numbers of seven commonly occurring bat species may fall under the remit of the Bat Mitigation Class Licence (Low Impact) (WML-CL21). The Class Licence permits 'Registered Consultants' to carry out licensable operations on site on behalf of clients following the registration of sites with Natural England at least 15 working days before the work is due to start.

2.2.6 Survey data supporting EPS licence applications or the registration of the site under the Bat Mitigation Class Licence (WML-CL21) must be up to date i.e. have been conducted within the current or most recent optimal survey

season i.e. May to August. Therefore, if surveys show bats are present and licensable work is delayed until during or after the next survey season, updated surveys will be required to support an application or site registration.

2.3 Site Location and Context

2.3.1 The property is located on the western corner of Sidmouth Street and the southern side of Kennet Side in Reading, Berkshire (OS grid reference: SU 81330 60695)

2.3.2 The property is situated to the east of Reading town centre with the River Kennet flowing to the north and surrounded by commercial and residential buildings. Forbury Gardens, a parkland with scattered trees, is situated approximately 300 metres to the northwest. Kings Meadow with scattered trees is situated under 600 metres to the north and is situated along the River Thames which flows 760 metres to the north. These nearby habitats provide high quality commuting and foraging opportunities for bats roosting locally.

3 SURVEY METHODOLOGY

3.1 Evening Emergence and Dawn Re-Entry Survey

3.1.1 Evening emergence surveys were undertaken on the 7th and 21st June 2022 with a re-entry survey carried out on the 5th July 2022. The surveys were carried out by two surveyors, Conor Watson – an ecologist registered under the Natural England Bat Survey Class Licence CL17 (CL17 2020-44817-CLS-CLS) and by Jake Morgan – an assistant ecologist.

3.1.2 One surveyor was situated at the front (north-eastern) corner of the property (Survey Location 1) and a second surveyor was situated at the rear (north-western) corner of the property (Survey Location 2). A Sionyx Aurora Pro night vision camera was used to cover the rear elevation of the property on all three surveys.

3.1.3 All surveys were undertaken with the use of Elekon Batlogger M detectors. The Batlogger recordings were analysed using the BatExplorer software package.

3.1.4 The evening emergence surveys started 15 minutes before sunset and continued until 1.5 hours after sunset. The re-entry survey started 1.5 hours before sunrise and continued until sunrise.

3.2 Desktop Study

3.2.1 A 2km search of bat records for Berkshire and South Buckinghamshire Bat Group was commissioned for the site.

3.3 Survey Constraints

3.3.1 There were no significant constraints to the surveys, which were undertaken at a suitable time of year for undertaking emergence surveys i.e. May to August (Collins 2016), and in conditions suitable for bat activity i.e. dry with air temperatures 10°C or above at sunset/sunrise (Collins 2016).

4 SURVEY FINDINGS

4.1.1 Bat activity is summarised in the tables below, described in Paragraphs 4.4 and 4.5, detailed in a survey plan in Appendix 1 and the raw detector data is in Appendix 2:

4.2 Evening Emergence Survey Records – 7th June 2022

4.2.1 No bats were observed emerging from the property during the survey.

Table 1. Weather conditions and survey timings

	Wind (BF0-12)	Cloud cover (%)	Rain	Temp start (°C)	Temp end (°C)
Weather	2	60	None	17	15
Start time	21:03	Sunset time	21:18	Finish time	22:48

Table 2. Surveyor recordings at Location 1

Species	Recordings*	Emergences	Time of first call after sunset
<i>Pipistrellus pipistrellus</i>	225	None	0 mins

Table 3. Surveyor recordings at Location 2

Species	Recordings*	Emergences	Time of first call after sunset
<i>Pipistrellus pipistrellus</i>	214	None	0 mins
<i>Myotis</i> spp.	26	None	44 mins
<i>Plecotus auritus</i>	11	None	57 mins

(* The number of recordings is the number of times that the detectors were triggered when bat activity was detected).

4.3 Evening Emergence Survey Records – 21st June 2022

4.3.1 No bats were observed emerging from the property during the survey.

Table 4. Weather conditions and survey timings

	Wind (BF0-12)	Cloud cover (%)	Rain	Temp start (°C)	Temp end (°C)
Weather	0	15	None	21	19
Start time	21:11	Sunset time	21:26	Finish time	22:56

Table 5. Surveyor recordings at Location 1

Species	Recordings*	Emergences	Time of first call after sunset
<i>Pipistrellus pipistrellus</i>	22	None	0 mins

Table 6. Surveyor recordings at Location 2

Species	Recordings*	Emergences	Time of first call after sunset
<i>Pipistrellus pipistrellus</i>	59	None	1 min

(* The number of recordings is the number of times that the detectors were triggered when bat activity was detected).

John Wenman Ecological Consultancy
23/08/2022

4.4 Dawn Re-entry Survey Records – 5th July 2022

4.4.1 No bats were observed returning to roost in the property during the survey.

Table 7. Weather conditions and survey timings

	Wind (BF0-12)	Cloud cover (%)	Rain	Temp start (°C)	Temp end (°C)
Weather	0	0	None	10	9
Start time	03:26	Sunset time	04:56	Finish time	04:56

Table 8. Surveyor recordings at Location 1

Species	Recordings*	Re-Entries	Time of last call before sunrise
<i>Pipistrellus pipistrellus</i>	284	None	30 mins

Table 9. Surveyor recordings at Location 2

Species	Recordings*	Re-Entries	Time of last call before sunrise
<i>Pipistrellus pipistrellus</i>	160	None	25 mins
<i>Eptesicus serotinus</i>	2	None	58 mins

(* The number of recordings is the number of times that the detectors were triggered when bat activity was detected).

4.5 Emergence Survey Summary

4.5.1 No bats were observed emerging from the building by the two surveyors and the level of bat activity was high overall.

4.5.2 The common pipistrelle (*Pipistrellus pipistrellus*) bat was the only recorded species during both emergence surveys with passes and foraging high above the property, along the River Kennet, along Sidmouth Street and within the tree canopy of neighbouring gardens and river bank. The high level of common pipistrelle activity with frequent recordings before sunset indicates the likely presence of a common pipistrelle maternity roost within a property further along Sidmouth Street or the Queen's Cottages cul-de-sac.

4.6 Re-entry Survey Summary

4.6.1 No bats were observed returning to roost in the building by the two surveyors and the level of bat activity was high overall.

4.6.2 Consistent with the findings of the emergence surveys, common pipistrelle (*Pipistrellus pipistrellus*) bats dominated the recordings and there were frequent passes throughout the survey. The bats were primarily commuting or foraging along the River Kennet and the trees along its bank, commuting

along Sidmouth Street, commuting over the property, or foraging within the rear garden. Common pipistrelle activity was high and passes were recorded 25 minutes before sunrise which is within the typical re-entry time period for the species, indicating that there is likely to be a local maternity roosting site.

4.7 Habitat Features Suitable for Bats

4.7.1 The habitats on site consisted of typical residential garden habitats within an urban environment. The River Kennet is situated less than 10 metres from the northern wall of the property. The rear garden was poorly managed and primarily consisted of overgrown shrub with timber panel fencing along the borders. The front of the property along Sidmouth Street and the River Kennet was well lit with street lighting that illuminated the front of the property. Furthermore, a busy pathway ran parallel to the river which was open along the street but covered by tree canopy further on. These habitats will provide good foraging habitat for bats adapted to urban environments.

4.8 Desk Study Findings

4.8.1 A search of the bat records held by Berkshire and South Buckinghamshire reveal the following species: Barbastelle (*Barbastella barbastellus*), brown long-eared (*Plecotus auritus*), common pipistrelle (*Pipistrellus pipistrellus*), Daubenton's (*Myotis daubentonii*), Nathusius' pipistrelle (*Pipistrellus nathusii*), noctule (*Nyctalus noctula*), Leisler's (*Nyctalus leisleri*), serotine (*Eptesicus serotinus*), soprano pipistrelle (*Pipistrellus pygmaeus*), unidentified pipistrelle species (*Pipistrellus* sp.), unidentified long-eared (*Plecotus* sp.) and unidentified *Myotis* bats. The closest records are for commuting common pipistrelle and soprano pipistrelle bats at Abbey Ruins, approximately 200 metres from the property in 2017.

4.8.2 There have been four European Protected Species Mitigation Licences granted within a 1km radius of the survey site; approximately 120m to the north for the destruction of common pipistrelle and soprano pipistrelle day roosts (Case reference: 2019-441494-EPS-MIT); approximately 400m to the south for the damage or destruction of a common pipistrelle day roost (Case reference: 2016-22301-EPS-MIT); approximately 460m to the northwest for the destruction of a common pipistrelle day roost (Case reference EPSM2013-6155); and approximately 630m to the northwest for a Daubenton's roost (Case reference 2017-28045-EPS-MIT).

5 DISCUSSION AND RECOMMENDATIONS

5.1 Assessment of Bat Roost Status

5.1.1 During the emergence and re-entry surveys, no bats were observed emerging from the building or returning to roost in the building. The survey findings, combined with the preliminary roost assessment survey findings, suggest it is unlikely that the house currently supports roosting bats. The presence of bat droppings at the base of the party wall does indicate an historic roost and pipistrelle bat roosts are highly mobile, therefore there is potential for roosting bats to use the property in the future.

5.2 Impact of Proposals

5.2.1 The survey data shows that the proposed two-storey side and front extensions with an addition of a dormer window is unlikely to result in the damage or destruction of any bat roosts, or to the disturbance of bats occupying roosts. As such, a European Protected Species Mitigation Licence will not be required for the planned works to go ahead lawfully. Although there is evidence of previous use by roosting bats (likely pipistrelle) Natural England will not licence on a precautionary basis. As bats are highly mobile and therefore it is possible that bats could be present in the future, a precautionary non-licensed method statement should be adhered to as detailed in **Section 6**.

5.2.2 There will be no adverse impact on existing garden habitat that is suitable for foraging bats. It is recommended that any future planting makes use of native plants and encourages pollinators into the garden which subsequently provides good quality foraging habitat for bats adapted to urban environments.

6 NON-LICENSED METHOD STATEMENT

- 6.1.1** Prior to commencement of works on site, an updated pre-works check of the roof void will be carried out by a licensed ecologist, and if any bats are discovered, work will stop and a European Protected Species Mitigation licence will need to be obtained. If no bats are found, the licensed ecologist will give a toolbox talk on site to the contractors detailing the survey findings, the legislation protecting bats, the location of a historic roosting site in the property, good working practices, the measures that are required to protect bats during the work and what to do if bats are found.
- 6.1.2** If works are delayed unavoidably for longer than 12 months, an updated emergence survey is recommended to confirm that the status of the roost has unchanged.
- 6.1.3** A 'soft strip' approach to the roof works in the area where droppings were found close to the attached property will be adopted i.e., the careful removal of roof and hip tiles by gloved hands, and the winter hibernation season will be avoided wherever possible (mid-November to February). If bat(s) are discovered during the course of the work, the work must stop and a licensed ecologist would need to ensure that the bat is safely contained or released within a suitable protected location within the roof or in a temporary bat box on site. A European Protected Species Mitigation licence will need to be obtained before works can continue.
- 6.1.4** In the longer term, a roosting site for crevice-dwelling bats will be incorporated into the new rear extension to maintain a roosting opportunity within the property. An integral bat box will be constructed within the new cavity wall on the western aspect of the property.
