

## Proposed Works

T1 Lime: Located in the far-right corner of the property, over-hanging the north and east boundary.

There is a large cavity at the stem base on west side approximately 1m in height with an average width of 0.1m.

The cavity depth all round is approximately 0.4m and the diameter of the tree at 1.5m is 0.8m.

The hollowing projects down in excess of 1m.

The buttresses appear intact with no audible decay.

Reduce in height by 2m.

Reduce in lateral spread by up to 2.5m.

Ensuring all cuts are made at suitable growth points and a flowing natural canopy line is achieved.
