Notes

The survey data were oriented to Ordnance Survey (OS) National Grid (OSGB36) using industry Standard Network RTK GPS equipment utilizing the OS Active Network (OS Net). A true OSGB36 coordinate has been established on site using the OSN15 (transformation) & OSGB15 (geoid) models. The survey datum has been converted to this point and a further one (or more) OSGB36 points established to produce a true OS bearing for angle orientation. Scale factor 1.0 has been applied therefore the survey coordinates are shown on a pseudo OS grid. All levels are in metres unless otherwise specified.

All heights are in millimetres unless otherwise specified.
