

Proposed Work Schedule

- T1 Oak:
- Selectively prune to give a minimum of 2m clearance. *Photo 1*
- T2 Oak:
- Reduce one branch over-hanging the caravan by approximately 1.2m to bring in line with the bulk of the canopy. *Photo 2*
 - This branch overhangs the owner's caravan and he would like to minimize any potential risk to it.
 - Lift the crown to a height above ground level of 2.5m by removing secondary and tertiary growth.
 - This is to give adequate clearance on the drive for the caravan, vehicles and under the tree for mowing whilst adding more light to the lawn.
- T3 Oak:
- Reduce the quadrant of canopy projecting towards the neighbour's property to give a minimum of 2m clearance and blend in to the remaining crown. *Photo 3*
 - To minimize any potential damage to the neighbour's roof and increase air flow and light to the property.
 - Lift the crown to a height above ground level of 2.5m by removing secondary and tertiary growth.
 - This is to give adequate clearance on the drive for the caravan, vehicles and under the tree for mowing whilst adding more light to the lawn.
