

Ventilation / Extraction

- The café will be doing light load cooking only with low grease content and light grease and smoking load, our intention is to use a domestic cooker and high-grade domestic chimney cooker hood.
- We will extract through a duct and vent straight outside
- The vent will be a standard vent (example of which is right) and will have minimal impact to the appearance of the building.
- Cooker and Extractor hood will be on left hand wall as you face shop and we will extract directly out behind it to ensure maximum efficiency – see below where marked.
- It will be fitted as per manufacturers guidelines
