Revision	Comments	Date
D00	Issued for Planning	01.11.2019

Note:

This schedule is to be read in conjunction with the Landscape Architect's drawings provided at the time of issue be it Planning, Tender, Construction or Final Construction.

The details contained within have been submitted to discharge relevant planning conditions and as such will require approvals if the specifications are deviated from.

All materials specified are to be installed in accordance with the manufacturer's recommendations.

TREES			
Botanical Name	Common Name	Description	Image
Acer palmatum 'Bloodgood'	Japanese Maple 'Bloodgood'	Deep red-purple with divided foliage. AGM	

SHRUBS			
Botanical Name	Common Name	Description	Image
Buxus sempervirens	Common Box	The Common Box is a slow growing evergreen shrub with glossy green leaves, bright green on emergence darkening with age. Used mainly for hedging and topiary. Grows to a height and spread of 5m.	
Euonymus alatus 'Compactus'	Burning Bush/Winged Spindle 'Compactus'	'Compactus' is a compact, spreading, deciduous small shrub, developing prominent corky ridges on the branches. Leaves ovate-elliptic, turning rosy-red in autumn. Small green flowers followed by red-purple fruits containing orange seeds which hang on far into winter.	
Hydrangea arborescens 'Annabelle'	Sevenbark 'Annabelle'	A deciduous rounded shrub with large, green, broadly ovate leaves. Large white flower heads are borne in July to September. AGM	

Hebe 'Red Edge'	Shrubby Veronica 'Red Edge'	A dwarf, mound-forming, evergreen shrub with grey-green and red-edged leaves. During winter and spring this attractive red colouration becomes quite prominent due to the cold. Lilac-coloured flowers ageing to white are produced in June-July. AGM	
Lavandula x intermedia 'Grosso'	Lavender 'Grosso'	A strong growing form up to 60-80cm, with blue flowers on long stems in June.	
Lavandula angustifolia 'Hidcote'	Lavender 'Hidcote'	Dwarf growing compact form up to 60cm. Silvery grey-green leaves with flower spikes of deep violet-blue from June. AGM	
Laurus nobilis	Bay Laurel	The Bay Laurel has aromatic evergreen deep green foliage, which is used for flavouring food. Often used for topiary.	
Lonicera nitida 'Maigrün'	Box Honeysuckle 'Maigrün'	Low growing compact evergreen. Used for ground cover because of its dense, bushy spreading form. Smaller leaved and more even growth than L. pileata types. Good in sun or shade.	

Nandina domestica 'Fire Power'	Heavenly Bamboo 'Fire Power'	Upright evergreen shrub with yellowish-green leaves in summer which become orange and red in autumn and winter. Compact shrub which achieves maximum height of 0.5m	
Philadelphus 'Manteau d'Hermine'	Mock Orange 'Manteau d'Hermine'	Small shrub reaching only about 1 metre. Double white fragrant flowers in early summer. AGM	
Prunus laurocerasus 'Otto Luyken'	Cherry Laurel 'Otto Luyken'	Low growing, densely foliated evergreen shrub. Spikes of white flowers in April. All the Prunus laurocerasus types are tolerant of sun or shade and do well in all except the wettest or driest of soils. Rounded, fleshy, shiny red fruit is produced ageing to black. AGM	
Pinus mugo 'Mops'	Dwarf Mountain Pine 'Mops'	This very slow growing, dwarf, evergreen conifer has a dense, rounded form. Dark green needles are relatively short and light green new growth appears from the latter half of May. Small clusters of yellow male flowers can be found at the base of these new shoots with very small reddish-purple female cones appearing at the tops, turning green then ripening to brown after two to three years. Grows to 0.6m with a 1m spread, but will eventually reach 1.5m by 2m. For a comparison of the four different cultivars, 'Mughus', pumilio and 'Mops' eventually reach 1.5m or more, with the former having by far the fastest growth rate and the latter by far the slowest. 'Gnom' with its slow mounding form is the shortest and apparently the least available of all the four cultivars. AGM	

HERBACEOUS			
Botanical Name	Common Name	Description	Image
Echinacea purpurea 'Magnus'	Purple Coneflower 'Magnus'	The Purple Coneflower is an upright perennial with ovate to ovate-lanceolate toothed, rough, hairy dark green leaves. Daisy-like flowers with deep purple-pink petals and an orange-brown centre appear in July to October. As the flower matures, the petal colour fades but remain level unlike the species with the centre with its short, stiff bristles changing from being flat to becoming cone-shaped also differing from the species by this being larger. Flowers attractive to butterflies. Grows to 80cm high with a spread of 20-30cm. The plant is a source of antiviral agent and immune system stimulant.	
Hemerocallis 'Crimson Pirate'	Daylily 'Crimson Pirate'	This Daylily forms a rounded clump of green arching strap-shaped leaves to a height of 60-70cm when in flower. Red flowers with golden-yellow centres on green stalks are borne from July to August and are made up of typically narrow tapered tepals. Most flowers last for about one day, hence the name.	
Hemerocallis 'Stella de Oro'	Daylily 'Stella de Oro'	This Daylily forms a low rounded clump of green arching strap-shaped leaves to a height of 30-40cm when in flower. Golden-yellow trumpet-shaped flowers are borne on green stalks from June to August. Most flowers last for about one day, hence the name.	
Salvia nemorosa 'Caradonna'	Balkan Clary 'Caradonna'	An upright, clump-forming perennial with square, slightly hairy, green stems and green, shiny leaves. Violet flower spikes are produced above the leaves in June to August. Grows to 45-50cm high, reaching 60-70cm to the tops of the flower spikes. Spread is to 40-45cm. AGM	

GRASSES			
Botanical Name	Common Name	Description	Image
Calamagrostis x acutiflora 'Karl Foerster'	Feather Reed Grass 'Karl Foerster'	A semi-evergreen perennial grass forming dense upright clumps to a height of 1.5-1.8 metres with mid-green slender upright leaves. Feathery brown pink-tinged flower spikes on equally upright stalks in June/July later forming attractive straw-coloured tight plumes into the winter.	
Festuca glauca	Blue Fescue	The truest blue of the dwarf grasses and totally drought-proof once established. Grows up to 30 cm with the spread of 20cm.	
Pennisetum alopecuroides 'Hameln'	Fountain Grass 'Hameln'	This compact and free-flowering Fountain Grass forms dense spiky mounds of narrow arching glossy green leaves, which turn golden-brown in autumn. Produces cream-white cylindrical bristly spikelets, developing a purplish-tinge, from early July to September, which later turn silvery-green. Grows to 60cm high, reaching another 20cm when including the flowers.	
Stipa tenuissima 'Pony Tails'	Mexican Feather Grass 'Pony Tails'	This form of Mexican Feather Grass has all the attributes of the species, but appears to have fuller flower heads, hence the name 'Pony Tails'. Displays a fine texture giving a silky delicate feel. Forms upright short tight clumps of very fine bright green leaves which turn mainly buff-coloured and persist throughout the winter. Soft silky light green full plumes above from June, ageing to white-buff. Grows to 40cm and to 60cm with the flowers. Has a spread of just 30cm.
