Report Quality Management

Project Name	43 and 43A London Street, Reading RG1 4PS		
Project Title	Phase I Environmental Risk Assessment		
Client	Rose Hill Commercial Estates Ltd		
Project Number	19-195.01		
Version	Revision A		Date
Prepared by	Gavin Roberts BSc (Hons) FGS	Geo-environmental Engineer	17/05/2019
Prepared by	Orlando Blackwell BEng (Hons) MSc (Eng)	Principal Engineer	21/05/2019
Prepared & Checked by	James Burkitt BEng (Hons) CEnv MRICS	Managing Director	20/06/2019

Aviron Associates Limited (Aviron) has prepared this report in accordance with our fee proposal to the above listed Client or their agents and subsequent instructions pertinent to this which were received from the above listed Client.

This report is confidential and non-assignable by the Client. Aviron shall not be responsible for any use of the report or its contents for any other purpose than for which, and to whom, it was prepared and provided.

Should the Client pass copies of this report to other parties for further comment and advice the whole of the report should be provided and used in the context to which it was prepared.

No professional liability or warranty shall be extended to other parties by Aviron in this connection without the explicit written agreement thereto by Aviron.

Should this report be submitted to stakeholders or statutory bodies by any party other than the above listed Client a copyright law may be infringed and the party submitting the report may not be entitled to do so unless accompanied by a covering letter from Aviron or the Client.

For the avoidance of doubt and litigation Aviron should be contacted to establish lawful use of this report.

1.0 PROJECT AND SITE INFORMATION

1.1 APPOINTMENT

Aviron Associates Limited (Aviron) was retained by Rose Hill Commercial Estates Ltd (the “Client”) to prepare a Phase I Environmental Risk Assessment (ERA) of the following premises:

43 and 43A London Street, Reading, RG1 4PS (hereafter referred to as the “site”).

The purpose of this Phase I ERA is to present a desk-based study to identify potential areas of contaminative concern associated with the proposed residential re-development of the site.

This report addresses the ‘Pre-Application Advice’ from Reading Borough Council on 8 May 2019, reference 190364, Condition 3 e) Environmental Health Matters, Contamination, with regard to a ‘phase 1’ desk study.

Aviron has relied upon information received from the Client and their agents as accurate, unless contradicted by written documentation or site observations.

1.2 THE SITE

Table 1.2 provides a summary of site details and surrounding area.

Table 1.2 : Site Details

Site Location	The site is located on London Street, in the town centre of Reading, off Queen’s Road approximately 680 metres (m) to the south of Reading railway station.
National Grid Ref.	Centred at approximately 471834 173144.
Current Land Use	The site is currently occupied by London Street Dental Practice (43 London Street) which is located along the western boundary of the site, and Covenant Restoration Chapel International is located to the rear of the dental practice. A car park is located in the centre and eastern area of the site. Figure 1 is presented as the Existing Site Layout Plan. Figures 2 and 3 are presented as the Site Photographs.
Surrounding Land Use	The site is located within a mixed commercial and residential area. A new residential development (Studios) is under construction immediately to the east of the site.

Proposed Land Use

The proposed redevelopment comprises part-demolition of existing London Street facade and internal works to building alongside demolition of two storey building to rear to enable residential-led mixed-use development comprising 48 sqm community use (Class D1) and 21no. residential units (2 x studio, 7 x 1 bed, 9 x 2 two bed and 3 x 3 bed units) together with associated services enclosures, parking and landscaping.

Figure 4 is presented as a Proposed Development Plan.

1.3 SITE RECONNAISSANCE

A site walkover survey included an inspection of the site and surrounding area, where safe and accessible, was completed on 17 May 2019. The purpose of the survey was to identify any potential on-site or nearby contaminative activities or potential sources of land contamination. Additionally, as part of the survey any features which may affect site re-development in terms of physical site and ground conditions were noted.

Table 1.3 provides a description of site features observed during the walkover survey and also current Ordnance Survey maps made available at the time of report writing.

Table 1.3 : Summary of Walkover Survey

Physical Site Characteristics	
Existing Structures	A two-storey brick built, flat roof structure is present in the west of the site (number 43) in London Street. The structure is currently used as a dental surgery. A second two and three storey rendered, flat roofed structure (including lower ground floor) comprising Covenant Restoration Chapel International is present to the rear of the dental practice in the centre-west of the site. The remaining site is surfaced with tarmacadam, forming a car parking area.
Basements	No basements noted during the site walkover. Lower ground floor across sloping topography in the centre-west of the site associated with the chapel.
Visual Topography and Site Surfacing	The site is split over two levels. A flat area in the west, housing the dental surgery and chapel and a generally flat area in the east of the site, being the car park. A sloped pathway rising from east to west connects the two areas. The pathway is brick paved and remainder of the site is tarmacadam surfaced.
Retaining Structures and Slopes	The car park area is surrounded by a retaining wall, since it is raised approximately 2.0m above the surrounding land. A second retaining wall is situated along the connecting pathway, with the south of the site raised approximately 1.5-2.0m.

Drainage Issues	None observed during the site walkover.
Trees and Hedges	None observed during the site walkover.
Made and Infilled Ground	Made Ground to be expected as a sub-base beneath the existing structures and hardstanding and behind the retaining structures.
Contaminative Characteristics	
Above or Underground Storage Tanks and Drums	None observed during the site walkover.
Fuel Interceptors	None observed during the site walkover.
Waste Storage and Disposal	A small bin store is located in the east of the site with several wheelie bins situated along the connecting pathway.
Hazardous Material Storage and Use	None observed during the site walkover.
Asbestos Containing Materials (ACMs)	Potential for ACMs used within construction materials for the existing structures.
Boiler Houses	None observed during the site walkover.
Sub-stations	None observed during the site walkover.
Surface Staining	None observed during the site walkover.
Potentially Contaminative Activities	Evidence of potentially contaminative activities principally comprise; 1. Generally Made Ground beneath the buildings and hardstanding, and behind the retaining around the site.

Consideration will need to be made towards the following;

-  Generally Made Ground beneath the buildings and hardstanding, and behind the retaining structures around the site which may contain commonly encountered contaminants.

2.0 HISTORICAL REVIEW

Historical Ordnance Survey (OS) maps were obtained as part of the Envirocheck database search within report package ref. 204291092 dated 17 May 2019. The information contained in these maps is summarised in the following sections and included within **Appendix I**.

2.1 SITE HISTORY

2.1.1 Summary of Site History - Available Historical Mapping

The earliest available Ordnance Survey map edition of **1879, 1:2,500** indicates that the site was developed as an attached (terraced) building in the west fronting London Street (later marked as number 43), a series of attached buildings (mews) located in the centre, and rear gardens planted with deciduous trees in the north and east. A post office and Methodist chapel are located to the north and a malthouse to the south.

The map edition of **1895, (scale not shown)** indicates that the central area of the site was marked as Sims Court, and the buildings within the site were noted to have been predominantly two-storey with tile clad roofs. A dye house associated with a dyers fronting London Street is marked in the northern area of the site. A stationers, drugs (store) and wheat drying (malthouse) buildings are located immediately north, west and south of the site respectively.

The map editions of **1899, 1:2,500** and **1912, 1:2,500** indicate that the site remained essentially unchanged.

At the time of the **1931, 1:2,500** map edition indicates that a glass house had been constructed to the rear of number 43 London Street.

The **1938, 1:10,560** map edition, indicates that the site remained essentially unchanged.

The map editions of **1955** and **1958, (scale not shown)** indicate that the central area of the site was still in use as Sims Court, however a number of the buildings within the site appear to have been disused. Reference is made to roof cladding material as 'ASB', possibly referring to asbestos, above buildings in the western and northern areas of the site. A dental surgery and dental mechanic (number 43A) are shown to occupy buildings in the west of the site and Radio 1st is noted to occupy a building in the northern area of the site. A stationers, photo (store) and printers and stationary store buildings are located immediately north, west and south of the site respectively.

The **1962** and **1968, 1:1,250** map editions indicate that the site remained essentially unchanged at this time.

The **1988, 1:1,250** map edition, indicates that access to the site is shown to have been provided in the north-east of the site from East Street.

The current **2019, 1:1,250** map edition shows that the site remained essentially unchanged.

2.1.2 Summary of Site History - Planning Register

Limited information is available at Reading Borough Council regarding the planning history of the site, as referenced in the 'Pre-Application Advice' from Reading Borough Council on 8 May 2019, reference 190364, which indicates the following:

-  Relevant planning history on site refers to a 1985 permission for the change of use of the rear flat roof extension from a dental surgery to offices;
-  It is also suggested that a place of worship currently occupies the rear (first and second floor level) of the site (including the approved office accommodation).

2.1.3 Summary of Site History - Anecdotal Evidence

No anecdotal evidence was made available by the client at the time of report writing.

2.2 SURROUNDING LAND HISTORY

Table 2.2 provides a summary of historical land uses in the immediate vicinity of the site. This is approximately defined by the search buffer at a radius of approximately 500m on the 1:10,500 and 1:10,000 maps and 250m on the 1:2,500/1:1,250 maps.

Table 2.2 : Historical Surrounding Land Uses

Surrounding Features	Dates from mapping	Approximate distance	Direction
Dyers	1895	0m	N
Printing Works	1968-1979	19m	N
Gunter's Brook	1879-2019	78m	N
Lead & Zinc Works	1879	85m	NE
– redeveloped as 17-19 Queen's Road by 1957			
River Kennet	1879-2019	105m	NW
Works	1957-1962	155m	N
– redeveloped as King's Reach Court by 1991			

Table 2.2 : Historical Surrounding Land Uses

Surrounding Features	Dates from mapping	Approximate distance	Direction
Garage – redeveloped as King's Reach Court by 1991	1968	165m	N
Garage – redeveloped as 33 King's Road by 1988	1957-1968	219m	N
Works/Printing Works – redeveloped as London Court by 1991	1955-1988	0m	S
Builder's Yard	1957-1968	73m	SW
Biscuit Factory/Factory – redeveloped as Southern Court by 1991	1899-1989	79m	SE
Slaughter House	1957	118m	SE
Reading Tin Works/Works/Metal Box Works – redeveloped as housing by 1979	1879-1971	150m	S
Printing Work/Works – redeveloped as housing by 1988	1931-1957	184	SW
Police Garage – redeveloped as a youth centre by 1988	1979	22m	W
Works	1957-1979	32m	W
Factory/Depot	1957-1993	57m	W
Tram & Bus Depot/Transport Depot – redeveloped as a car park and cinema by 1999	1913-1993	73m	W
Gas Works – redeveloped as a Brewery by 1931 and The Oracle by 1999	1879-1912	168m	W
No further significant land uses have been observed in the historical data set within the specified vicinity to the site.			

2.2.1 Summary of Surrounding Land History

The historical mapping indicates that commercial industrial development in the wider site area comprises a number of works, factories, depots, garages, yards and a slaughter house within 250m of the site.

Within the local area a dye house was noted immediately north of the site, and a printing works/works immediately to the south.

The majority of the commercial industrial development has been subsequently redeveloped as retail premises, car parks, a cinema, offices and housing.

2.3 ARCHAEOLOGICAL CONSIDERATIONS.

None noted within the historical dataset. The Local Authority archaeological officer has not been contacted as part of our instructions.

3.0 ENVIRONMENTAL SETTING

Unless otherwise stated Geo-Environmental Setting information has been obtained from Landmarks Envirocheck Database and Geology Datasheets within report package ref. 204291092 dated 17 May 2019. These are included as **Appendix II**.

3.1 GEOLOGY AND HYDROGEOLOGY

The British Geological Survey (BGS) sheet 268 (1:50,000 edition) of Reading was consulted, and presented within table 3.1 is the anticipated geology.

Table 3.1 : Anticipated Geology

Stratum	Age	Possible Thickness (m)	Typical Description	Aquifer Status
Artificial/Made Ground None noted below the site	N/A	N/A	N/A	N/A
Superficial Taplow Gravel Member (TPGR) <i>across the southern boundary of the site</i>	Quaternary - Wolstonian	Average 5m, locally to 9m	Sand and gravel, locally with lenses of silt, clay or peat	Secondary (A) aquifer
Solid Seaford Chalk Formation and Newhaven Chalk Formation	Cretaceous Coniacian to Campanian-	95-155m	Undifferentiated chalk	Principal aquifer

There are no fault lines recorded within 250m of the site.

The Envirocheck report indicates that there are no references to 'artificial ground' noted within 250m of the site.

Reference is made in the Envirocheck report to 'potentially infilled land (water)' at the location of the mill stream and tail race associated with a former mill on the southern bank of the River Kennet at three locations 105m west, 132m west and 187m to the west where the former use is noted as 'unknown filled ground (pond, marsh, river, stream, dock etc.)'.

The nearest historical BGS borehole records available for ground investigation works within 250m of the site refer to drilling works undertaken at locations 50m to the east and 86m to the west where superficial strata of gravel (3.65m) and topsoil (1.21m) were encountered respectively. The gravel at the nearest location was not bottomed out (at 3.65m) however the anticipated solid geological strata of the Upper Chalk was confirmed at the borehole location 86m to the west. The rest groundwater level was noted to be 2.1m below ground level (bgl) at the location of the borehole 86m to the west.

During the walkover survey chalk strata were observed at ground surface following a minimal site-strip as preparation works for the 'Studios' development scheme immediately to the east of the site.

The hydrogeology of the site has been determined by the superficial strata of the Taplow Gravel Member across the southern boundary of the site and the underlying Chalk Formations, which according to the Envirocheck report and the GOV.UK website are classified as a secondary (A) aquifer and a principal aquifer respectively. Secondary (A) aquifers comprise permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers. Principal aquifers are layers of rock or drift deposits that have high intergranular and/or fracture permeability which may support water supply and/or river base flow on a strategic scale.

The groundwater vulnerability for the natural (solid) strata beneath the site is noted to be a principal bedrock aquifer of high combined vulnerability.

Both the Envirocheck report and the GOV.UK website (May 2019) indicate that the site is not located within a source protection zone.

The Envirocheck report indicates that there are twenty-four groundwater abstraction licences recorded for premises within 2000m of the site. The nearest licence refers to Royal Berkshire Hospital at a location 634m to the south-east where Thames region groundwater is abstracted for the purposes of 'hospitals; drinking; cooking; washing; (small garden)' use. There are no potable groundwater abstraction licences noted for premises within 2000m of the site.

3.2 HYDROLOGY AND FLOODING

The Envirocheck report indicates that the nearest surface water comprises the River Kennet (an inland river) which is located 124m to the north-west of the site. A former stream (Gunter's Brook, now culverted) noted on historical mapping is located approximately 78m to the north of the site.

The Envirocheck report indicates that the quality of the River Kennet at a location 217m to the west of the site is 'B' (good).

There are five records in the Envirocheck report relating to surface water abstraction licenses for premises within 2000m of the site. The nearest record refers to Oracle Shopping Centre Limited where Thames region surface water is abstracted for the purposes of 'amenity: lake and pond throughflow'. There are no potable surface water abstraction licences noted for premises within 2000m of the site.

The Envirocheck report indicates that there are no prosecutions or enforcements noted in connection with premises within 250m of the site.

The Envirocheck report indicates that there are eleven records in connection with pollution incidents to controlled waters within 250m of the site. The nearest record relates to premises at a location 133m to the north of the site, and refers to the pollutant as 'storm sewage'; however the incident is shown to have been Category 3 (minor). All of the remaining incidents are also noted to have been Category 3. There is one record in connection with a substantiated pollution incident within 250m of the site at a location 243m to the north where 'oils - diesel (including agricultural)' are shown to have resulted in a Category 4 (no) impact.

The Envirocheck report indicates that there is one record in connection with Local Authority Pollution Prevention and Controls for a crematoria located 74m to the south-east.

The Envirocheck report indicates that there are eight records detailing discharge consents for premises within 250m of the site. Six of the records refer to Huntley & Palmers Limited at a location 138m to the north for 'trade discharges - cooling water' into a freshwater stream/river (Kennet), however each of the consents is shown to have been revoked. Two further consents detail 'trade discharges - cooling water' and 'unknown' discharges into the River Kennet and Holy Brook, at locations 202m west and 250m north-west of the site respectively. Again each of the consents is shown to have been revoked.

The Envirocheck report indicates that the site is not at risk of flooding from rivers or seas without defences, and is not at risk of 'extreme' flooding from rivers or seas without defences. The Environment Agency website (May 2019) indicates that the site is not located within a Flood Zone 2 or a Flood Zone 3.

The site is not located in an area that benefits from flood defences. The site area is not shown to be used for flood storage.

The Envirocheck report indicates that the site is not located in a 1 in 30, 1 in 100 and 1 in 1000 year surface water flood extent.

The Envirocheck report indicates that the site is located within a BGS groundwater flooding susceptibility area, where there is 'potential for groundwater flooding to occur at surface'.

3.3 WASTE MANAGEMENT, LANDFILLING AND GROUND GAS

Information from the Envirocheck report and the GOV.UK website indicates that there are no historical or current landfill sites located within 250m of the site. There are three records of 'infilled ground (water)' noted in the Envirocheck report within 250m of the site in connection with the former mill adjacent the River Kennet at distances between 105m and 187m to the west where the former use is noted as 'unknown filled ground (pond, marsh, river, stream, dock etc.)'.

The Health Protection Agency (HPA) records indicate that the property is located within an area where <1% of properties are above the Radon Action Level, and that radon protection measures are not required.

Section 3 of CIRIA C665 'Assessing risks posed by hazardous ground gases to buildings' provides a flow chart to overview the risk potential. There are limited potential ground gas risks identified within the historic mapping editions and the Envirocheck report, principally the infilled ground associated with the former mill stream and tail race to the west, and the potential for decaying organic matter within alluvium associated with the River Kennet. Potential for backfill behind the retaining structures around the site should also be considered.

Further consideration of ground gases should therefore be made.

4.0 REGULATORY INFORMATION, CONSULTATIONS AND OTHER

Unless otherwise stated regulatory database information has been obtained from the aforementioned Envirocheck report included as **Appendix II**.

4.1 STATUTORY REGISTERS AND AUTHORISATIONS

Table 4.1 includes the statutory registers and authorisations that relate to the site and surrounding area.

Table 4.1 : Statutory Registers and Authorisations

Item	0 – 250m	251 – 500m
Contaminated Land Register Entries and Notices	0	0
Records of Licensed Discharge Consents	8 no. - 138m N to 250m NW All consents have been revoked	8
Prosecutions Relating to Controlled Waters	0	1
Enforcements and Prohibition Notices	0	0
Integrated Pollution Controls	0	0
Integrated Pollution Prevention and Control	0	0
Local Authority Integrated Pollution Prevention and Control	0	0
Local Authority Pollution Prevention and Controls	74m SE - Crematoria	2
Local Authority Pollution Prevention and Control Enforcements	0	0
Pollution Incidents to Controlled Waters	11 no. - 133m N to 239m N All category 3 'minor incidents'	38
Substantiated Pollution Incident Register	1	1

4.2 CONSULTEES

4.2.1 Local Authority - Contaminated Land Officer

The Local Authority Contaminated Land Officer has not been contacted as part of our project instruction, however as part of the aforementioned 'Pre-Application Advice' from Reading Borough Council the following is mentioned:

-  Relevant planning history on site refers to a 1985 permission for the change of use of the rear flat roof extension from a dental surgery to offices;
-  It is also suggested that a place of worship currently occupies the rear (first and second floor level) of the site (including the approved office accommodation).

4.2.2 Local Authority - Building Control Officer

The Local Authority Building Control Officer has not been contacted as part of our project instruction.

4.2.3 Local Authority - Petroleum Officer

The Local Authority Petroleum Officer has not been contacted as part of our project instruction.

4.2.4 Environment Agency - Contaminated Land and Groundwater

The Contaminated Land and Groundwater Team of the Environment Agency has not been contacted as part of our project instruction.

4.2.5 Coal Authority and Mining Searches UK

The Coal Authority and Mining Searches UK have not been contacted as part of our project instruction.

4.2.6 Sensitive Land Uses

The Envirocheck report indicates that there are no sensitive land uses within the immediate vicinity of the site.

5.0 PRELIMINARY ENVIRONMENTAL RISK ASSESSMENT

5.1 METHODOLOGY

A Preliminary Risk Assessment (PRA) and Conceptual Site Model (CSM) have been prepared in accordance with CLR11 based on the information obtained as part of this desk study and site inspection. Possible risks associated with potential source of contamination and sensitive receptors identified have been assessed via a source-pathway-receptor (SPR) model in accordance with current UK protocols.

A risk may only exist where a plausible SPR linkage is presented and where the quantity or concentration of a contaminant is sufficient to pose harm. Under the statutory definition "Contamination" may only exist where contaminants pose a risk of harm to a receptor. Risk may be defined as a function of the likelihood and severity of any adverse effects resulting from a contamination event. This risk classification has been assessed in accordance with CIRIA C552. A summary of how risk is derived and the associated definition is presented in tables 5.1.1 and 5.1.2.

Table 5.1.1 : Risk Ratings Matrix

	Consequence			
Probability	Severe	Medium	Mild	Minor
High Likelihood	Very high risk	High risk	Moderate Risk	Moderate/low risk
Likely	High risk	Moderate Risk	Moderate/low risk	Low risk
Low Likelihood	Moderate Risk	Moderate/low risk	Low risk	Very low risk
Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

Table 5.1.2 : Risk Ratings Definition

Risk Rationale	Definition
Very high risk	A high probability that sever harm could occur to determined receptor from identified contaminant - OR - evidence exists that severe harm to receptor is currently occurring. Urgent investigation and remediation should be considered. If demonstrated this risk is likely to result in substantial liability.
High risk	Harm is likely to occur to determined receptor from identified contaminant. Urgent investigation and short-term risk minimisation remediation followed by longer term fit for purpose remediation should be considered. If demonstrated this risk is likely to result in substantial liability.
Moderate Risk	It is possible that harm could occur to a determined receptor from identified contaminant. It is relatively unlikely that any harm would be severe or should harm occur it is likely to be relatively mild.
Moderate/low risk	It is possible that harm could occur to a determined receptor from identified contaminant. It is unlikely that any harm would be severe or should harm occur it is probable to be relatively mild.
Low risk	It is possible that harm could occur to a determined receptor from identified contaminant. It is unlikely that such harm, if indeed present, would at worst be mild.
Very low risk	There is a low possibility that harm could occur to a receptor. In such event the harm would not be severe.

5.2 POTENTIAL SOURCES OF CONTAMINATION

Based on the desk study and site inspection completed table 5.2 presents a summary of the potential sources identified.

Table 5.2 : Potential Sources

Source	Description	Potential Contaminants	On/off-site
1. Made Ground within the site	The historic development of the site including a mews and a dye house and more latterly a dental surgery and dental mechanics poses a risk of potentially contaminated Made Ground.	Metals, hydrocarbons (TPH/PAH), volatile organic compounds, asbestos.	On
2. Ground gases	Backfill behind the retaining structures noted during the site walkover. Infilling associated with the mill adjacent the River Kennet, and organic matter within alluvial strata.	Methane and carbon dioxide.	On Off within 250m

5.3 PATHWAYS

A pathway is one or more routes or means that a receptor can be exposed to, or affected by, a contaminant.

Table 5.3 : Plausible Pathways

On-Site and Locally
Direct contact; By humans and infrastructure
Underlying geology/hydrogeology; secondary (A) aquifer above a principal aquifer
Inhalation and ingestion
Surface run-off/drainage

5.4 RECEPTORS

A receptor is either a living organism, a group of organisms, an ecological system, controlled waters or property that could be harmed or polluted by a contaminant. Table 5.4 examines the potential receptors.

Table 5.4 : Potential Receptors

Receptor	Description	Comments	Plausible
Construction workers	Groundworkers and general construction works	Construction works proposed within the site	Yes
End users	Occupants of the proposed development	Communal gardens and planted borders proposed across the site	Yes
Adjacent land users	Sensitive land uses identified in the immediate vicinity	Adjacent commercial and residential properties which could be affected by run-off or migration	Yes
Soft landscaping	Areas of new planting including lawns	Site shall be partly covered in hardstanding	Yes
Water supply pipes	Plastic pipework for potable water supply to new apartments may be affected if laid in contaminated soils	New supply required for redevelopment	Yes
Buildings & infrastructure	Buried concrete for new foundations may be in contact with aggressive ground (sulphur attack)	New building works proposed where potentially contaminated Made Ground could exist and pyritic ground	Yes
Groundwater	Controlled waters (aquifers) beneath the site	Secondary (A) aquifer above principal aquifer. No drinking water abstraction within 2000m of the site. Potential contamination may leach downwards or laterally off-site	Yes
Surface waters	Controlled water such as lakes, streams, rivers or coastal waters	River Kennet 124m NW	Yes
Ecological receptors	Sensitive areas of ecological significance defined under Part 2A of EPA 1990	No sensitive land use noted in the immediate vicinity	No

5.5 SUMMARY OF POLLUTANT LINKAGES FOR PROPOSED LAND USE - INITIAL CSM

The initial CSM is based upon the proposed site end use and the information currently consulted relating to various risk sources and plausible pollutant linkages and is presented within table 5.5.

Table 5.5 : Initial Conceptual Site Model (for plausible pollutant linkage pathways)

Source	Receptor	Pathway	Probability	Consequence	Risk & Justification
Source 1 <i>Soil contam resultant of Made Ground and former site use etc.</i>	Construction workers	Direct contact	Likely	Medium	Moderate/low As a result of historic development and the presence of a former dye house and more latterly the dental surgery and dental mechanics, there is a risk that overlying Made Ground across the site may contain common soil contaminants Short term risk to adults not expected to be significant. Wear PPE.
	End users	Direct contact	Unlikely	Medium	Low As a result of historic development and the presence of a former dye house and more latterly the dental surgery and dental mechanics, there is a risk that overlying Made Ground across the site may contain common soil contaminants. The ground floors of the development buildings will be covered in permanent hardstanding comprising floor slabs. Limited soft landscaping is proposed, although it is likely overlying soils shall be stripped from site to construct the surrounding buildings and hardscaping. Thus, most for most areas the source of Made Ground is likely to be removed and/or encapsulated.
	Adjacent land users	Direct contact via run-off	Unlikely	Medium	Low Site is level, enclosed and predominantly covered in hardstanding. Little evidence of surface staining. The level and enclosed site restricts run-off.
	Water supply pipes	Direct contact	Likely	Medium	Moderate As a result of historic development and the presence of a former dye house and more latterly the dental surgery and dental mechanics, there is a risk that overlying Made Ground across the site may contain common soil contaminants. Complete Ground Investigation including soil chemical testing. Potential requirement for barrier pipe.

	Buildings & infrastructure	Direct contact	Likely	Medium	Moderate Aggressive ground conditions within Made Ground could attack concrete (sulphur attack). Complete Ground Investigation including soil chemical testing.
	Groundwater	Vertical migration through hydrogeology	Unlikely	Medium	Low As a result of historic development and the presence of a former dye house and more latterly the dental surgery and dental mechanics, there is a risk that overlying Made Ground across the site may contain common soil contaminants Soil contaminants may leach downwards due to secondary aquifer beneath the site, however, previous land uses and current inspection do not suggest significant contamination potential. Complete Ground Investigation including groundwater chemical testing if encountered.
On-site Groundwater contamination resultant from source 1	Construction workers End Users Adjacent Land Users Soft Landscaping Water Supply Pipes	Direct contact	Unlikely	Medium	Low Groundwater is expected below the site in secondary aquifer. Groundwater potentially within accessible depth of ground surface.
	Buildings & infrastructure	Direct contract	Likely	Medium	Moderate/low Groundwater is expected below the site in secondary aquifer and may contain sulphates which can attack concrete. Complete Ground Investigation including water sampling and testing if encountered.
	End Users	Upwards migration of vapours through geology	Low likelihood	Medium	Low Groundwater is expected below the site in secondary aquifer. Groundwater potentially within accessible depth of ground surface.

	Groundwater (aquifer)	Migration through hydrogeology	Unlikely	Medium	Low Soil contaminants may leach downwards due to secondary aquifer beneath the site, however previous land uses and current inspection do not suggest significant contamination potential.
Source 2 <i>Soil ground gases and vapours</i>	Construction workers	Inhalation of vapours/gas	Low Likelihood	Mild	Low Gas and vapour risk associated with on and off-site degrading organics within soils behind retaining structures, infill associated with a former mill and alluvial strata in the wider area. However, risk limited when working in shallow excavation and outdoor air. Wear PPE
	End users	Inhalation of vapours/gas	Likely	Medium	Moderate Gas and vapour risk associated with on and off-site degrading organics within soils behind retaining structures, infill associated with a former mill and alluvial strata in the wider area. Potential for gaseous migration into ground floor rooms/spaces Complete ground gas testing and risk assessment to confirm risk potential.

The overall environmental risk classification for the site is **MODERATE/LOW** as a result of the historic development of the site and site environs, to present day and the current use.

5.5 CONTAMINANTS OF CONCERN FOR FUTURE SITE INVESTIGATION

Based on the known current and historical site and surrounding land uses the following analytical suites should be selected for future ground investigation works chemically assess soil quality;

 Aviron's "Suite 1" of laboratory analysis shall be applied to future site investigations which includes; arsenic, barium, cadmium, total chromium, copper, nickel, zinc, lead, mercury, selenium, water soluble boron, total cyanide, total sulphate, water soluble sulphide, speciated PAH, total phenols, pH and Organic Matter. **In relation to general Made Ground quality associated with identified Source 1.**

 Total Petroleum Hydrocarbons (TPH CWG). **In relation to activities associated with Source 1.**

-  **Asbestos. In relation to activities associated with Source 1.**

-  **Volatile Organic Compounds (VOC). In relation to activities associated with Source 1.**

The listed suites of analysis are considered suitable and will provide a screening for the majority of commonly found soil contaminants for the identified risk areas.

6.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ERA has reviewed a number of desk-based sources of information along with a site inspection to determine any potential environmental and geotechnical risks which may impact the site.

Table 6.0 summarises the pertinent environmental risks providing advice on further works and assessment.

Table 6.0 : Environment Risk Summary

	Risk No.	Risk Description	Comments
Soils	1	Anticipated (shallow) Made Ground soil contamination from historical land use. Principally in the western, centre-western and northern areas of the site. Risks to construction workers and end-users.	Complete soil sampling and suitable chemical testing. Wear PPE.
	2	Made Ground soil quality. Risk to water main supply pipe.	Complete soil sampling and suitable chemical testing. Consult local water authority prior to water main installation. Likely barrier pipe will be required.
	3	Made Ground and general chemical soil quality. Risk of chemical attack of buried concrete.	Complete soil sampling and suitable chemical testing.
Groundwater	4	Groundwater anticipated beneath the site in secondary aquifer of the Taplow Gravel Member. However, given previous and current land uses it is unlikely groundwater will be significantly contaminated.	Complete precautionary groundwater sampling and suitable chemical testing if encountered.
Ground Gas/Vapour	5	Ingress of hazardous ground gases (CH ₄ , CO ₂) and soil vapours into new building and depleted oxygen.	Complete suitable gas/vapour monitoring and risk assessment. If risk present mitigate by installing gas protection to ground floor slab and wall cavities.

The risks identified above are not considered significant and based on a recent site inspection it is unlikely gross contamination exists at the site. Hence, it is the opinion that potential contaminative risks can be addressed and resolved in a reasonable simple technical and commercial manner.

Notwithstanding the above; in order to further evaluate the risk that the site may present, a suitable ground investigation will need to be completed. It is recommended this comprises at least eight intrusive borehole/trial pit locations, where at least three locations should be converted to ground gas and water monitoring wells. Appropriate soil and groundwater sampling and chemical testing should be completed to determine contaminative profiles. Additionally, a suitable program of ground gas and vapour monitoring with risk assessment should be completed.

7.0 PROJECT INSTRUCTION AND LIMITATIONS

7.1 SCOPE OF WORKS

The following scope of work was undertaken to an agreed brief set out in Aviron's proposal and involves the following:

- 📍 Site reconnaissance survey, to include inspection of the infrastructure and potential discussions with the owner regarding site activities.
- 📍 Procurement of available historical map editions, geo-environmental sensitivity data and British Geological Survey (BGS) borehole records.
- 📍 Identification of potential areas of environmental concern relating to current and/or historic site use and surroundings to prepare a refined Conceptual Site Model (CSM).
- 📍 Preparation of suitable conclusions and recommendations with regard to the site's suitability for use or the requirement for further assessment and site investigation on the basis of the CSM.

Aviron has relied upon information received from the Client and their agents as accurate, unless contradicted by written documentation or site observations.

7.2 PUBLISHED GUIDANCE

This report follows the technical approach presented in Contaminated Land Report 11 (CLR11) "Model Procedures for the Management of Land Contamination" prepared by the Environment Agency in 2004. CLR11 provides guidance on the application of management processes when assessing potentially contaminated land.

This project and report have been designed to fulfil the information requirements set out in the Environment Agency Guidance on Requirements for Land Contamination Reports prepared by the Environment Agency in 2005.

Notwithstanding the above this report is additionally prepared in accordance with current guidance notes, standards and practices as set out by the Environment Agency and statutory organisations in order to establish potential and significant pollutant linkages as defined in Part IIA of the Environmental Protection Act 1990.

7.3 LIMITATIONS

Should changes in legislation, statutory requirements or industry practices occurred following issue of this report, this report should be viewed in light of these changes.

Should a notable time period elapse between the date issue of this report and the date of application of this report changes to site dynamics may occur and in particular the site inspection notes may no longer be applicable should any change of use occur to the site in the interim.

AVIRON ASSOCIATES LIMITED

is a dynamic company of Chartered Environmental Surveyors and Geotechnical Engineers.

We continuously work hard to ensure our services are the most technically competent, efficient and viable in our market place. Our years of experience of vastly varied sites and projects compliment our ability to deliver assured and effective Ground Investigations and Risk Assessments of both Brownfield, Greenfield and Currently Developed Land.

Our clients choose Aviron to plan, design and manage their Ground Investigations and Land Remediation Schemes assisting in land procurement to deliver engineering requirements, discharge planning and ensure their sites are suitable, developable and sustainable.

Our tenaciously committed team ensure regardless of project value we will always deliver quickly, effectively and exceed expectations.

Published 1879

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1973

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Published 1882

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Reading

Published 1990

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2019

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Report Version v53.0

Summary

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 1		8	8	16
Prosecutions Relating to Controlled Waters			n/a	n/a	n/a
Enforcement and Prohibition Notices					
Integrated Pollution Controls					
Integrated Pollution Prevention And Control					
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 9		1	2	6
Local Authority Pollution Prevention and Control Enforcements					
Nearest Surface Water Feature	pg 10		Yes		
Pollution Incidents to Controlled Waters	pg 11		13	37	92
Prosecutions Relating to Authorised Processes					
Registered Radioactive Substances	pg 34			2	12
River Quality	pg 36		1		3
River Quality Biology Sampling Points					
River Quality Chemistry Sampling Points	pg 37				2
Substantiated Pollution Incident Register	pg 38		1		1
Water Abstractions	pg 39		1		4 (*24)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 46	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 46	1	n/a	n/a	n/a
Groundwater Vulnerability - Local Information			n/a	n/a	n/a
Bedrock Aquifer Designations	pg 46	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 46	Yes	n/a	n/a	n/a
Source Protection Zones	pg 46			1	1
Extreme Flooding from Rivers or Sea without Defences	pg 46		Yes	n/a	n/a
Flooding from Rivers or Sea without Defences	pg 47		Yes	n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 48		14	21	40

Summary

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Waste					
BGS Recorded Landfill Sites					
Historical Landfill Sites					
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)					
Local Authority Landfill Coverage	pg 57	1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Potentially Infilled Land (Non-Water)	pg 57				3
Potentially Infilled Land (Water)	pg 57		3		13
Registered Landfill Sites					
Registered Waste Transfer Sites					
Registered Waste Treatment or Disposal Sites					
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)	pg 58				1
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)	pg 58				1
Planning Hazardous Substance Consents	pg 58				1
Planning Hazardous Substance Enforcements					

Summary

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 59	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 59	Yes	Yes		Yes
BGS Recorded Mineral Sites	pg 60				39
BGS Urban Soil Chemistry					
BGS Urban Soil Chemistry Averages					
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas			n/a	n/a	n/a
Mining Instability	pg 67	Yes	n/a	n/a	n/a
Man-Made Mining Cavities	pg 67		1	6	20
Natural Cavities	pg 71			5	31
Non Coal Mining Areas of Great Britain	pg 77		Yes	n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 77	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 77		Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards	pg 77	Yes	Yes	n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 77	Yes		n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 77	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 78		Yes	n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 79		47	63	195
Fuel Station Entries	pg 104			1	4
Points of Interest - Commercial Services	pg 105		8	12	43
Points of Interest - Education and Health	pg 110			1	8
Points of Interest - Manufacturing and Production	pg 111			12	17
Points of Interest - Public Infrastructure	pg 113			5	21
Points of Interest - Recreational and Environmental	pg 115		2		5
Gas Pipelines					
Underground Electrical Cables					

Summary

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Sensitive Land Use					
Ancient Woodland					
Areas of Adopted Green Belt					
Areas of Unadopted Green Belt					
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves					
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones	pg 117				1
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.
