PHASE 1 ENVIRONMENTAL INVESTIGATION NO 4153/19 AT No. 2 MASON STREET, READING, BERKSHIRE FOR PROPOSED HOUSING RE-DEVELOPMENT

1 INTRODUCTION

- 1.1 This investigation was commissioned by the homeowner Shahida Riaz, in order to provide an initial assessment of the potential for ground contamination on the proposed development area.
- 1.2 The Contamination Assessments have been carried out with reference to CLR 11 (Model Procedures for the Management of Land Contamination), as well as Environment Agency Guidance for the Safe Development of Housing on Land Affected by Contamination (R&D Publication 66-2008) and BS 10175 (Code of Practice for the Investigation of Potentially Contaminated Sites). This phased approach is set out below.
- 1.3 Various photographs maps, plans and overlays are presented in the report text, but these have also been reproduced at a larger size in the figure pages, 2 to 14. The figure pages also include snapshots of the appended geology, historic and site sensitivity map sets.

Phase 1 (or Desk Study)

- 1.4 Firstly, a conceptual model was formulated detailing all plausible contaminant linkages between potential sources of contaminants and their routes to potential receptors of those contaminants. This involved largely desk based investigations of historic maps and records together with site reconnaissance and some intrusive investigations.
- 1.5 Depending on circumstances and the outcome of the desk based work it may not be necessary to carry out further assessments.

Phase 2

- 1.6 If plausible contamination linkages are identified at phase 1, a generic quantitative risk assessment may need to be carried out by physical investigation. Measured contaminant concentrations would be assessed with respect to generic (rather than site specific) guideline values.
- 1.7 These comparisons would then be used to review each of the linkages made in the conceptual model thus revising the model. This allows unacceptable risks to be defined and also the need for further assessment, physical investigations, or remedial works.

2 SITE DETAILS

Site Location

- 2.1 This site is located about 1km due west of the centre of Reading. The site centre is located at grid reference 470520E 173600N and post code reference RG1 7PD.

Brief Description

- 2.2 The site under consideration is approximately 300m² and is rectangular in shape. At the time of the investigation the site was a residential plot at the end of a Victorian Terrace.

3 GEOLOGY, HYDROGEOLOGY, TOPOGRAPHY AND HYDROLOGY

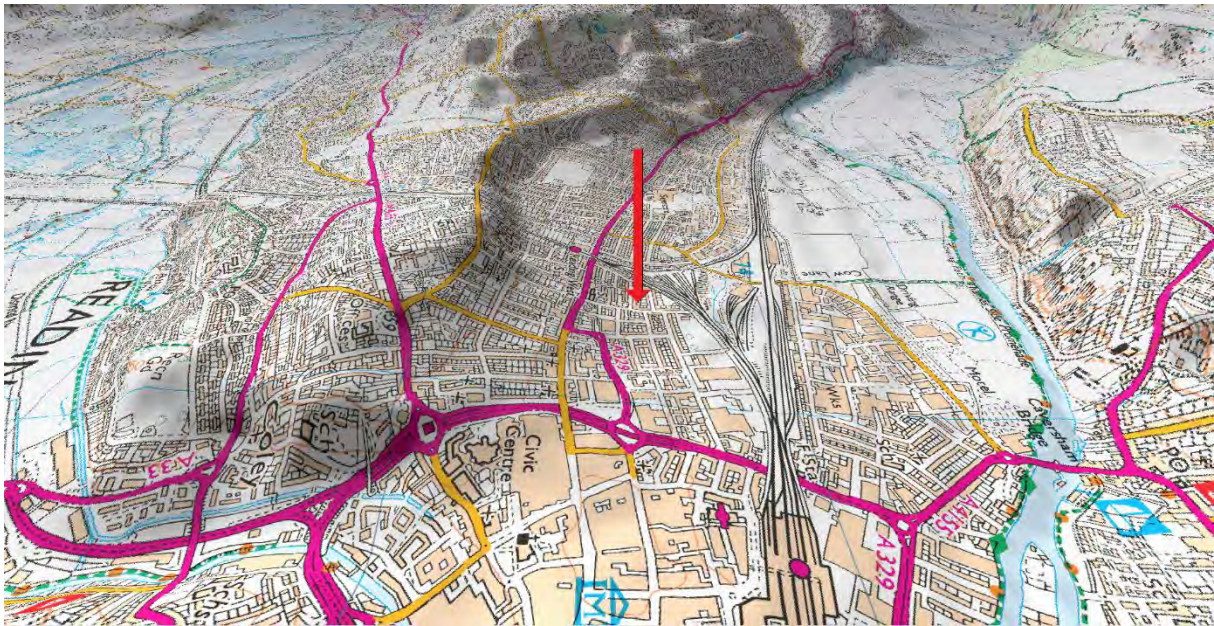

Published Geology

- 3.1 The British Geological Survey Map, 1 in 50,000 scale sheet No 268 Reading shows the site to be underlain by Taplow Gravel River Terrace Deposits which overlie the Seaford and Newhaven Chalk Formations. The two Chalk Formations are not differentiated by these maps.

Published Hydrogeology

- 3.2 The Environment Agency Groundwater Maps (<http://maps.environment-agency.gov.uk>) which have replaced the old Groundwater Vulnerability mapping show the site to be underlain by 'bedrock' deposits (Seaford and Newhaven Chalk Formations) which are designated as a Principal Aquifer. The overlying soils (Taplow Gravel Deposits) are designated as a Secondary (A) Aquifer.
- 3.3 1 to 100,000 Institute of Geological Sciences Hydrogeological mapping for South West Chilterns and the Berkshire and Marlborough Downs shows the groundwater within the Chalk to be expected at a level of 30m AOD. Given that the site lies at approximately 40m AOD implies that groundwater lies some 10m below ground level at the site location.
- 3.4 The direction of the contours indicates that the movement of the groundwater in the Upper Chalk is eastward.

Topography and Hydrology

Above a copy of the 1 to 25,000 scale map rendered according the height data given on these maps. (Note the vertical scale is greatly exaggerated to allow the topography to be visualised)

3.5 The site lies on the side of the Thames Valley, about 1.1km from the River itself. This valley lies just to the north of the Valley of the River Kennet. The ground on which the site lies is a remnant ridge between the two valleys which diminishes to the east where the Rivers meet. This ridge forms a watershed for rainwaters falling on the area. Ground levels around the site area fall gently down to the south and the flat alluvial ribbon over which the River Thames meanders.

Migration of Surface Water and Groundwater

3.6 Given the topography and the underlying geology we would expect rain waters falling in the area around the site (but to the north of the ridge or watershed described above), to be largely intercepted by the surface water drainage system and channelled southward and into the river. Some infiltration of rainwater would take place into areas of open ground and into soakaways.

- 3.7 This water would be expected to move downward through the Taplow Terrace Gravel to join the groundwater within the Chalk some 10m below ground level in the area of the site. Historically some of this groundwater may have emerged at spring lines at the edges of the River Terrace Gravels however, we would expect these to have been culverted long ago.

Catchment Areas for Contamination

Above a copy of the 1 to 25,000 scale 3d map showing the potential routes for contaminants that could migrate onto the site.

- 3.8 On this basis we consider that catchment area for contaminants that could migrate onto the site was to the north. Contamination outside these areas would bypass the site and move away to the north and would not be expected to pose any risk to the site.

4 SITE HISTORY

- 4.1 Extracts of historical maps which are centred on the site have been reviewed. Two sets of maps are available, the first set is at 1 in 10,560 scale or six inches to one mile and shows an area which encompasses a 1km radius around the site. During the 1960's to 1970's this set of maps was updated to a more rational scale of 1 in 10,000. The second set of maps is at 1 in 2,500 scale and encompass a 250m radius around the site.

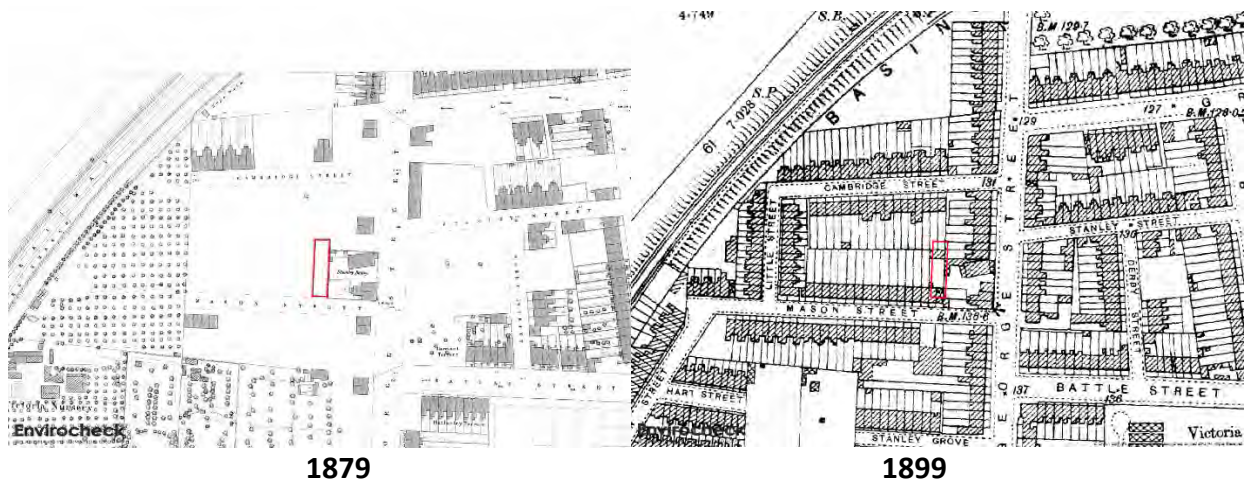

- 4.2 The maps have been scrutinised for potential features which could indicate a contaminative past and the locations of the features are presented on the modern map below. A detailed description of the changes between each map issue has not been drawn up.
- 4.3 Distances between particular features and the site are given as a 'closest boundary to closest boundary' basis and rounded to the nearest 5m. The nature of the features may be unclear from the maps and the features are labelled exactly as shown on the maps. Suspected features or unlabelled features are marked as such.
- 4.4 It should be noted that the decisions as to the inclusion of a surface feature during surveys was made by the surveyor involved at the time and not all pertinent features, with respect to contamination, may have been included.

Area Context

- 4.5 The first map in the six inches to one mile scale maps (1 in 10560) is dated 1882/83 and shows that the site area lies in an already well developed residential area. The triangular junction of the main Great Western Railway and the southern Basingstoke Line is also already in place just to the west of the site. Land to the north of the railway and south of the River Thames was undeveloped and labelled 'Liable to Floods'.
- 4.6 The 1882/83 map shows that there are numerous engine sheds, coal yards and sidings along the railway to the north of the site, including the Great Western Railway Works. Given the large coal yards shown, we would assume that there would be equally sized ash dumps. The map then shows dwellings on narrow streets to the east of the site, nurseries to the south and central Reading lying beyond, just 500m away.

- 4.7 The next maps are dated 1900, 1913, 1932 and 1938 and show that the residential areas have expanded, dwellings are now shown in the immediate area of the site, including the dwelling that now stands on the site. A tramway power station now joins the gas works and brewery in the centre of Reading (now the Oracle Centre) and more factories and railway sidings appear flanking the Great Western Railway to the north of the site.
- 4.8 The 1948 aerial picture shows that the railway yards and sidings were very busy. The coal yards and neighbouring sidings appear darkened with coal and the sidings to the north east of the site can be seen to be filled with carriages, the picture is not of sufficient resolution to determine the types of carriage present.
- 4.9 The post war maps show that the land to the north of the railway on Richfield Avenue, labelled as being liable to floods, as well as the land on Portman Road to the south of the railway, have both started being developed with industrial buildings. The 1973/76 map shows that the development covers largely what we can see at those locations today.
- 4.10 In central Reading the gas works and tramway power station are now shown as being parts of the Brewery and that the Reading Inner Distribution Road (IDR) is now in place.
- 4.11 The post war period also saw a decline in the railway infrastructure with the large Great Western Railway Works to the north east of the site disappear, as do the sidings seen between 500m and 1000m south west of the site.
- 4.12 The remaining maps in this series, from 1990 onward show that the railway land in the Reading area has shrunk away to leave sidings solely within the junction triangle to the west of the site. The brewery occupying the old gas works and power station site have been replaced by the Oracle shopping centre.

Site Area

- 4.13 The first of the 1 in 2500 scale maps is dated 1878, and the town map at 1:500 scale show that the site area was open ground beside a dairy. The area has already been divided into blocks by the road system and Mason Street and Cambridge Street are shown which suggest that this area had been designated for residential development some time previously.
- 4.14 To the west of the site, the maps show a section of the triangle railway junction discussed previously. Between the railway and the block of land on which the site lies, as well as land to the south, are both labelled as an orchards or nurseries. The 1878&1879 maps both show a triangular area 100m to the north west of the site which does not appear to be part of the wider residential development. A small building is shown together with a long track labelled rope walk. This probably where a small scale rope manufacturer operated. The walk was a long area where strands were laid out and then twisted together to make rope.
- 4.15 The 1899 map then shows that the remaining areas on Mason Street and the other adjacent streets have been filled with houses, including the dwelling seen on the site today. The dairy building appears to still be in place, together with its outbuildings and the nursery areas to the west and south of the site have been covered with dwellings.
- 4.16 Few changes are shown then on the remaining pre-war maps, the most notable is the 'rope walk' triangle now being labelled 'allotment'. The last remaining nursery which lay just over 100m to the south east finally disappears between 1961 and 1971 map editions to be replaced by Reading Central Swimming Pool.

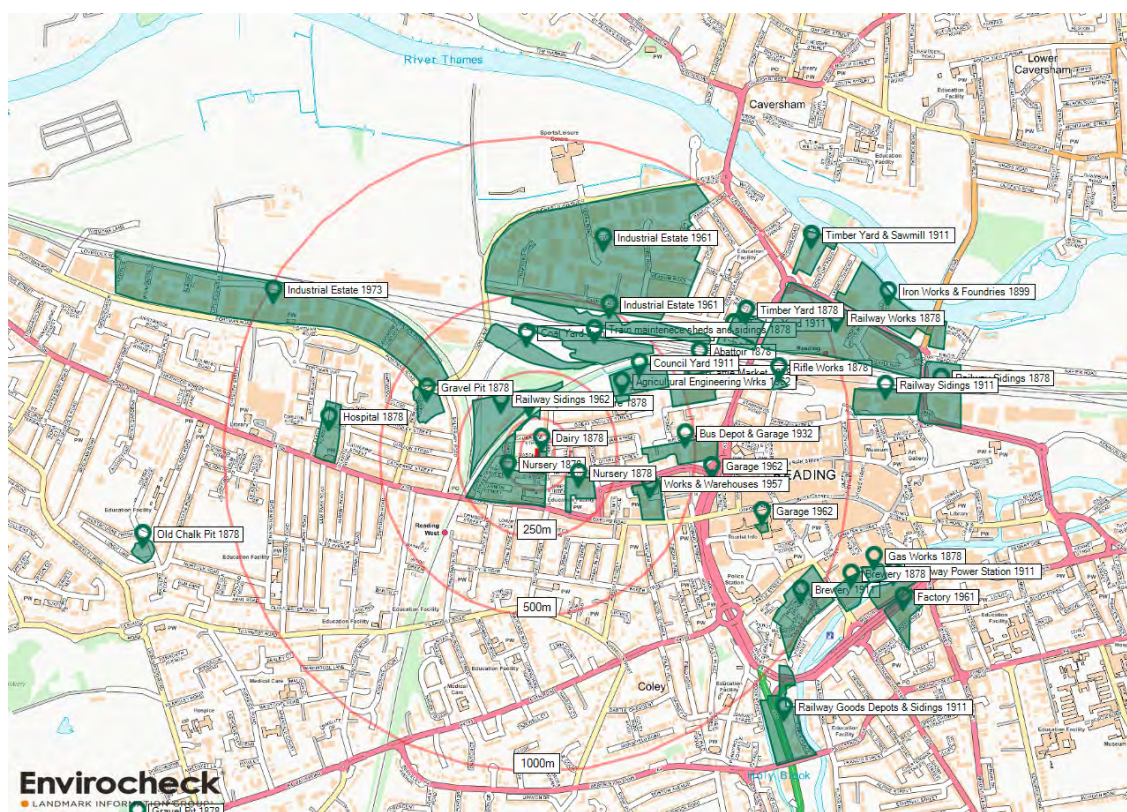

4.17 Although the swimming pool is shown on all maps up to and including those dated 2019, Terramech were involved with investigations of the pool area before it was demolished this year (2019) which revealed some marginal fuel oil contamination from a boiler system.

Modern Aerial Photography

4.18 Aerial photography presented on the Google Earth platform shows 14 aerial pictures going back to 2003 (pictures not presented in this report). Although the dated appear somewhat spurious (i.e. pictures dated in December showing trees in full leaf) they do give a number of snapshots of the activities on the site.

4.19 The first picture shows that a full two storey extension has been added to the rear (north) of the No 2 which is part of a long terrace of dwellings. The 2004 picture shows that a single storey extension has been added to the east of the first and appears to be covered by blue plastic sheeting. The garden is shown to be small and partly covered with concrete and partly laid to lawn. Shadows on some of the pictures suggest that the western boundary of the garden is formed by a retaining wall. The drop in level between the garden to No. 2 and No. 4 to the west cannot be defined from these pictures.

Summary

A section of the 2018 O/S OpenMap with the locations of features seen on preceding historic O-S maps.

4.20 The historic maps have shown that the site lies on land that has been residentially developed since before 1899. The dwellings were constructed to house the workforce for Reading's industrial growth at that time. Although there is much industrial and railway land to the north of the site, the site area is well separated from these potential sources of contamination.

4.21 The site lay beside what was formerly a dairy however, the dairy buildings did not extend onto the site area under consideration.

5 ENVIRONMENTAL SENSITIVITY

Notes on Environmental Records / Information

- 5.1 Readers of this report should note that Terramech have used third party database information when compiling this report. All databases have their limitations, including not being regularly updated and not including all available data. No guarantee can therefore be given for the accuracy or completeness of the information.

Contaminated Land Register

- 5.2 The database search revealed that the allotments 100m north west of the site, where 'rope walk' was noted on the 1878 & 1879 maps, also appear on the Contaminated Land Register.
- 5.3 Further research showed that the allotment was declared under Part 2A of the Environmental Protection Act in September 2008 due to elevated concentrations of Benzo (a) Pyrene.
- 5.4 This tarry hydrocarbon is a combustion by product (Pyrogenic PAH) and associated with coal fired locomotives and coal yards, as well as ash from domestic hearths which was probably used by allotment holders to increase potash (Potassium salts) levels in the soil.

- 5.5 We would also note that hand rope manufacture also involved preparation of fibres by boiling and use of pitch and creosote by products from gas work sites as rope preservatives.
- 5.6 The entry discusses a remediation statement that work was completed and the date given was 2011.
- 5.7 We consider that this area no longer poses a risk to the wider environment, including the development site area.

Controlled Waters

- 5.8 The Environmental Database search for this site was reviewed with respect to controlled waters. This comprises two sets of considerations, firstly aquifers with water abstractions and other sensitive bodies of groundwater and their protection. Secondly, entries for water discharges from various sources, including sewage discharges as well as industrial discharges have also been reviewed together with recorded pollution incidents with respect to potential risks to the site area.

Water Abstractions

- 5.9 The site was not shown to lie in any source protection zones around sensitive abstractions. The closest outer zone to the site lay over 1km east of the site.
- 5.10 The site is indicated by the database information to overlies a principal or major aquifer however, the closest abstraction for direct potable supply was 775m west of the site at Battle Hospital. Any contamination on the site or in the areas surrounding the site would not be expected to pose a risk to this abstraction given the migration routes discussed previously.

Discharge Consents

- 5.11 A number of discharge consents were noted, the closest were discharges of treated sewage effluent to soakaways on the railway land within the triangle junction. These were from buildings for permanent way staff. Further north discharges of sewage effluent as well as other trade discharges were taking place to various brook and stream tributaries of Holy Brook and the River Thames. Due to the locations, all of these discharges would only affect land to the north and not the site and surrounding areas.

Pollution Incidents

- 5.12 Several minor pollution incidents were recorded by the Environment Agency. The closest was 425m north west of the site. Most were on railway land or in the industrial areas to the north of the site. A cluster was also noted in Coley to the south east of the site however, these all lay beyond the watershed described in the previous migration of surface and ground water section.
- 5.13 None of these incidents were thought to have affected the surface soils on the development site.

Statutory Authorisations / Local Authority Pollution Control

- 5.14 These authorisations are recorded by the database and include entries for integrated pollution controls, radioactive substances, planning hazardous substances, planning hazardous activities and air pollution control authorisations, among others.
- 5.15 Although the substances and activities authorised are potentially contaminative, the presence of an authorisation implies some control or mitigation of the risks at source, rather than the presence of an uncontrolled industrial process.

- 5.16 The review of the database entries has shown that there were a number of authorisations for fuel stations, various industrial processes and dry cleaners. All of these sources were considered to be small and with suitable safeguards against ground contamination in place. None were considered to be sufficiently close to the site area to pose any unacceptable risks.
- 5.17 The database search revealed one record of a COMAH sites (Control of Major Accident Hazards) and one NIHHS sites (Notification of Installations Handling Hazardous Substances) within 1km of the site.
- 5.18 Both entries were inactive or ceased and referred to the Calor Gas Works on Cow Lane to the west of the site which is no longer present.

Waste Treatment and Landfill

Historic Excavations

- 5.19 Waste disposal sites often begin their existence as old quarries and pits which are then filled, potentially with waste, refuse or even contaminated soils. Sometimes these were recorded as landfills but in some cases there was no control or authorisation for the disposal of waste in a pit. The following excavations were noted over the map area which could represent infilled ground.
- 5.20 The historic maps did not however, note any large excavations in the area, a small gravel pit was noted at the junction of Cow Lane and Portman Road at the former location of Battle farm. No landfill records are shown for that location.

Waste Management Records

- 5.21 The database search revealed two landfill sites in this area. The largest lay 750m north of the site on the northern side of Richfield Avenue. This large landfill was noted to have accepted commercial and household waste, and liquid sludge and was closed in 1979.

- 5.22 Historic maps then show that the recreation centre appeared on that land sometime between the 1979 and 1990 map editions. This landfill lies to the north of the site and any leached contaminants would not be expected to move south, against shallow groundwater and surface water flow, to affect the proposed development site. Ground gases would not be expected to migrate over 700m and surface on the site area.
- 5.23 The second and smaller landfill lay on Cow Lane some 340m east of the site. This was shown to have received inert waste, probably to infill low lying ground beside the railway embankment. Given the distance involved and direction of surface water flow, we do not consider this to pose a risk to the site.

Industrial Activities

Above, an overlay of the 1878 map and a modern aerial picture

- 5.24 The historic mapping showed that the site lay beside an old dairy. This dairy could not have involved any livestock and milking parlours and we suspect that it was purely a distribution centre for churns of milk or already bottled milk. As such the only identifiable contaminants would be ash from the hearths heating the dairy .

5.25 The list of trade directory entries given in the database search for potentially contaminative commercial activities was reviewed and revealed that there was a scatter of garage workshops, cleaners and fuel stations were recorded. Given the size of these businesses and the distances from the site we do not consider that any could have affected the surface soils on the site.

Ground Subsidence/Instability

5.26 The Ground Instability section of the database search has been reviewed with respect to the published geology and showed that the site lay in an area where compressible ground stability hazards and shrinking swelling clay ground stability hazards were not expected.

5.27 The site was also shown to lie in an area where very low risks of collapsible ground stability hazards, landslide ground stability hazards and running sand ground stability hazards could be expected together with low risks of ground dissolution stability hazards.

5.28 The development proposal does not however, include any new foundations and we do not see that the information in this part of the database is sufficiently pressing to require recommendations to be given for investigation of the underlying soils.

Flood Risk

5.29 This site is not shown, by the database, to be an area subject to flood risks or being an area which benefits from flood defences. The area is not shown to be a flood water storage area.

5.30 Areas at risk of flooding are shown flanking the River Thames which lie very close (120m) to the site. We would recommend that any proposals to put a basement level below this building should involve some groundwater monitoring.

Ground Gases

- 5.31 Radon protection measures were derived from the BR211 (2007) Annex A maps without the requirement for a geological assessment and the Envirocheck report supplied for this site indicate that no radon protection is required for new buildings or extensions in this area.
- 5.32 The preliminary findings of the desk study show that the site does not lie in an area which could be affected by landfill gases such as Methane, Hydrogen Sulphide or Carbon dioxide. Although unlikely, physical investigations may however, reveal potential gas sources on the site.

Sensitive Land Use

- 5.33 The site was not shown to lie near to, or within, any Sites of Special Scientific Interest (SSSI), Special Protection Areas (SPA) or Areas of Outstanding Natural Beauty (AONB). No areas of ancient woodland, protected wetlands or other natural habitats were noted in the area.

6 WALKOVER SURVEY

- 6.1 Photographs taken during the site walkover are presented in the figures pages. These photographs represent a selection of those taken, the remaining photographs are kept on file at Terramech and can be viewed on request.
- 6.2 The site was seen to be a residential plot set in a residential area. The dwelling on the site was shown on maps to be part of a long terrace however, the dwelling on the site is of two storey construction whilst the neighbouring property and the rest of the terrace were all three storey with a lower basement level and slightly higher roofs.

- 6.3 The front of the property included a garage type doorway at street level, not seen on any of the dwellings in the terrace. This led into what looked like a garage through the main part of the building and into an extension of the garage into the rear garden.
- 6.4 Given the residential use we have not inspected inside the dwelling.
- 6.5 The rear garden was small, partly laid to concrete with some area of open and overgrown ground present. Although overgrown with plants we could see that the topsoil comprised much crushed brick and concrete. Samples were taken however, they could not be properly refrigerated after being taken and could not therefore be relied on for laboratory analysis.
- 6.6 The eastern garden boundary was formed by a concrete block wall, the western garden boundary by a brick wall. This brick wall was retaining at least 1m of soil on the site side of the wall. The neighbouring garden and the basement floor levels were at least 1m lower.
- 6.7 The rear (northern) site boundary was occupied by a very old timber framed, corrugated iron shed. Historic maps show that structure to be present on the 1899 map.
- 6.8 The shed contained a number of old bicycles and tools for bike repairs, as well as an old bath and some filing cabinets. We saw no evidence of any commercial engineering or car maintenance work. We could not however see any inbuilt purpose for this building apart from use as a stable perhaps.

7 CONCEPTUAL SITE MODEL

- 7.1 This conceptual model uses the source-pathway-receptor methodology to assess the information gained from the database search and review of the historical maps together with assessments of the published geology, hydrogeology and topography.

- 7.2 The purpose of this model is to define the plausible linkages between contamination in the soils below a site and sensitive receptors such as residents and then enable a preliminary, qualitative risk assessment to be carried out.
- 7.3 The risk assessment is to establish if there are potentially unacceptable risks, if further information is required to complete the assessment and whether or not further action is needed in terms of a more detailed risk assessment. If a clear risk is established it may be appropriate to move straight to the consideration of remedial works (CLR11 Section 2.1 - Overview).

Potential Contamination Sources

- 7.4 The first part of the source pathway receptor linkage is identification of a potential source of contamination. This would include on site potential sources such as soils imported from old industrial sites or residues of processes which were carried out on the site.
- 7.5 Off site contamination sources can also be a risk to receptors on a site if the contaminants are able to move onto the site area.
- 7.6 The potential sources are drawn from the desk study investigations however, sources such as made ground (imported soil) could be present without any sensible documentary evidence and are therefore included in the conceptual model regardless of the desk study findings.

Migration Pathways

- 7.7 Ground contaminants can be absorbed in the soils and be effectively stationary or can move with groundwater. In the case of liquid or gaseous contaminants, they move by themselves.

- 7.8 Migration pathways fall into two categories, the first are natural porous soils which will allow the percolation of water, gases or other liquids either vertically or horizontally. The second category of migration pathways comprises man made pathways such as granular backfill to service trenches, soakaways or areas of made ground.
- 7.9 In areas underlain impermeable strata or covered by hardstanding, surface water flow can also carry contaminants whether by un-channelled flow during floods or flow via watercourses and drainage ditches etc.
- 7.10 Airborne pathways for the migration of dust and fibres are present if site conditions become dry and dusty or during the demolition of any structures containing asbestos or during the trafficking of contaminated areas.
- 7.11 Contaminants present at the ground surface can be trafficked from source location to elsewhere by plant equipment or even by foot traffic. We have found that this is a particular concern with contamination by asbestos fibres.

Absorption Pathways

- 7.12 The entry routes for contaminants into a human being are numerous and are summarised in the table below. These exposure pathways are considered as part of the overall Source Pathway and Receptor model and are not to be confused with migration pathways. Migration pathways are included to encompass all potential plausible links between source and receptor.

Ingestion of Soil Ingestion of household dust Ingestion of contaminated vegetables Ingestion of contaminated soil attached to vegetables Dermal contact with soil	Dermal Contact with household dust Inhalation of fugitive soil dust Inhalation of fugitive household dust Inhalation of vapours outside Inhalation of vapours inside
---	--

Receptors

- 7.13 In order to assess the vulnerability of a receptor, investigations consider the exposure scenario to which receptors are subjected. Where re-development is proposed this scenario is defined by the proposed end use of a site, as a residential area or allotment for example. This investigation considers the potential contamination with respect to ongoing use of the site, rather than any demolition and re-construction.
- 7.14 Construction workers could be considered potential receptors due to their presence on site. Exposure routes to ground contamination would arise from earth handling activities and working over areas of impacted ground. The exposure durations for such workers will be very limited when compared to an occupier.
- 7.15 Service maintenance workers were considered a potential receptor due to their periodic presence on site during construction and following completion. Exposure routes to ground contamination would arise from earth handling activities during works to install or maintain these services. Again, the exposure durations for such workers will be very limited when compared to an occupier.
- 7.16 Future homeowners are probably the most sensitive of the receptors considered due to the time periods over which they could be exposed to any contaminants present. Young children will play and create mud baths in their gardens exposing themselves to the underlying soils in terms of dermal exposure and they can also ingest significant quantities of this soil during such play. Children and adult occupants may be exposed to the underlying soils during gardening activities and also consume fruit and vegetables which have taken up contaminants.

- 7.17 The wider public could be considered receptors of long range airborne contaminants such as volatiles liberated during excavations, dust from contaminated materials exposed by excavation or airborne fibres liberated during demolition or removal of asbestos building materials.
- 7.18 Groundwater is abstracted and consumed in bulk without any treatment in large areas of the country. Groundwater also feeds many springs lakes and rivers whose ecosystems depend on uncontaminated water. Groundwater has therefore been selected as a sensitive receptor in its own right although it could be considered under this assessment to be a migration pathway.

Identified Potential Linkages

1) Made Ground

- 7.19 Made ground could be present under any section of the site. Material can be imported for a variety of reasons, usually to modify ground levels particularly close to water courses.
- 7.20 At this site we are expecting some thin layers of made ground which are inevitable around buildings and just represent old materials such as bricks worked down into the topsoil.
- 7.21 We would also note that construction work at this time involved all sorts of bad practices compared with modern works. Little or no waste was removed from site, waste bricks and other scrapped building materials including painted timber, roof flashing, window beading, as well as soil and cleared vegetation would have been burned and the ash spread out in the garden areas.

- 7.22 We are also expecting to see some made ground behind the retaining wall on the western site boundary which could represent imported soils or soil with burned waste from construction of the terrace.
- 7.23 The sources of any imported materials and therefore the potential contaminants present were seldom considered in the past. During these eras some constituents of infill material such as scrap metals, ash and Asbestos were regarded as inert and used in rather inappropriate places. Made ground could therefore contain a wide range of commonly occurring industrial contaminants.
- 7.24 The list of potential contaminants therefore includes a basic list of toxic metals, tarry combustion residues (PAH) and petroleum hydrocarbons in recognition of the fact that the soils could be arising from nearby historic foundation excavations, or waste from gas works.
- 7.25 If contaminated fill materials are present then the site occupants as well as the construction workforce could be at risk. Depending on the type of fill present, if at all, wider risks from dust liberation during construction or release of contaminants into groundwater by excavation disturbance could also occur.

2) Lead Fallout from Historic Leaded Fuel Use

- 7.26 This site lies in a urban area which was established well before the use of Lead additives in fuel ceased. Any heavy traffic in the Reading area before the year 2000 will have left residues of this lead.
- 7.27 The organic Lead compound Tetraethyl Lead was added to petrol to aid the combustion process in reciprocating engines. All parts of the compound would oxidise during combustion including the Lead, leaving behind Lead oxide which inhibited combustion and so slowed down the combustion process.

- 7.28 This was desirable to prevent 'knocking' where the fuel burns too quickly and not slowly over the whole downward stroke of a piston.
- 7.29 Cleaning products were also added to the fuel such as 1,2-dibromoethane and 1,2-dichloroethane which would scavenge accumulated Lead and Lead Oxide and create volatile Lead compounds such as Lead Bromide and Lead Chloride which were expelled in the engine exhaust.
- 7.30 The fallout of Lead Oxide from the atmosphere affected soils flanking roads and even gardens in urban areas. Values as high as 800mg/kg have been measured by Terramech in non-industrial, urban garden areas in Reading.

3) Dairy

- 7.31 This small business was labelled on the 1878 map only, the building which lay askew from the neighbouring buildings, remained on the maps until the 1972 edition showed that it had been removed. This map also showed that a large milk depot had appeared 100m to the south of the site.
- 7.32 We suspect that the Stanley dairy was used as a distribution centre which at that time would have involved horse and cart milk floats handling milk churns or bottle milk.
- 7.33 The only contaminants associated with this activity would be fuels, to heat the buildings or pasteurise the milk and disinfectants used in daily cleaning such as solutions of Phenols and Cresols (Carbolic Acid).
- 7.34 Given the time period that has elapsed since any disinfestation took place at the dairy, we do not consider that it poses any risk to the development site.

4) Nurseries

- 7.35 The historic maps showed that this area contained large areas labelled nurseries. These areas were used mainly for food and flower production. Nurseries with green houses tend to leave the most lasting legacies since application of such chemicals within the confines of a glass house would prevent any pesticides or other chemicals from becoming airborne and then shelter the soil from rainfall. Pre war pesticides were nasty metalloid compound such as Lead Arsenate and tobacco as a fumigant. Post war pesticides included the new organo chlorine and organo phosphorus discovered by the German company Faber.
- 7.36 We would also note that some commercial greenhouses will have been heated during the winter months and portable paraffin type fuel burners were used extensively.
- 7.37 Given that the site itself did not have any greenhouses and given that we do not consider that pesticides or fuel could have remained in the soils once dwellings were constructed on the southern side of Mason Street sometime before 1899. On this basis we do not consider these nurseries to pose any plausible risk to the soils underlying the development site.

Tabulated Conceptual model

- 7.38 This Conceptual Model is summarised below in a tabular format. The most plausible linkages are then risk assessed.
- 7.39 The Risk Assessment comprises our interpretation of the model procedures set out in DEFRA/EA CLR 11 (Model Procedures for the Management of Land Contamination) report and considers if a potential risk is (1) acceptable, (2) acceptable following further assessment, (3) acceptable following remediation or (4) unacceptable.

	Potential Source ON SITE	Potential Location	Associated Contaminants	Potential Migration Pathway	Potential Absorption Pathway	Potential Receptor	Preliminary Risk Assessment	Note
Linkage 1	Made ground	Whole site	<i>Suites must reflect the nature and therefore the source of the waste materials noted. In the absence of such evidence then the basic suite below is recommended.</i> Arsenic, Cadmium, Chromium, Lead,, Mercury, Nickel and Selenium, Cyanide (free and total) Hydrocarbons <i>including</i> Phenols, Poly -cyclic Aromatic Hydrocarbons Asbestos Ground gases inc CH ₄ , CO ₂ and H ₂ S	Already present at surface on site. Migrating off site by surface routes or porous soils to affect off site receptors or groundwater.	Dermal contact with soil Ingestion of Soil Inhalation of fugitive soil dust (outside) Dermal contact with household/indoor dust Ingestion of household/indoor dust. Inhalation of fugitive household/indoor dust Ingestion of contaminated vegetables & attached soil Inhalation of vapours or gases outside Inhalation of vapours/gases inside. Groundwater	Construction Workers. Service and Maintenance Workers. Site Occupiers Wider public Groundwater	Acceptable following further assessment.	Given the presence of a retaining wall at the western garden boundary, and given the age of the terrace, we suspect that made ground with construction debris is present in the garden area. These soils may be unsuitable for a residential garden where plants could be grown for consumption.
Linkage 2	Lead from the historic use of Lead additives (Tetraethyl Lead)	From urban atmosphere	Lead oxide Lead Bromide Lead Chloride				Acceptable following further assessment.	This area is likely to have had significant fallout of Lead oxide during times of peak car use. This fallout could cause the surface soils in the gardens behind the terrace to be contaminated with Lead.

	Potential Sources OFF SITE	Potential Location	Associated Contaminants	Potential Migration Pathway	Potential Absorption Pathway	Potential Receptor	Preliminary Risk Assessment	Note
Linkage 3	Stanley Dairy	5m east	Phenol/ cresol disinfectants combustion residues in ash (from building heating and pasteurisation)	Leached, spread up onto site surface area through porous soils. Leached, spread up onto site surface area by surface water flow.	Dermal contact with soil Ingestion of Soil Inhalation of fugitive soil dust (outside)	Construction Workers. Service and Maintenance Workers. Site Occupiers	Acceptable	This dairy has been unused for decades and we would not expect dissolved phenol in solution to persist in soils over this period. Ash may have been used to dress the yard behind the dairy building however this would not affect the site area
Linkage 4	Victoria Nursery	100m south west	Metal Nitrates, Phosphates, Sulphates as plant nutrients. Older pesticides such as Chromated Copper Arsenate, Ammoniacal Copper Arsenate, Ammoniacal Copper Zinc Arsenate, Acid Copper Chromate, Ethyl Mercury Chloride. Heating Fuel Oil /Paraffin	Direct migration of volatiles/gasses up onto site surface area through porous soils. Direct migration of fluid contaminants up onto site surface area, through porous soils. Surface contaminants trafficked onto site. Dust containing contaminants including fibres settling on site. Directly to Groundwater	Dermal contact with household/indoor dust Ingestion of household/indoor dust. Inhalation of fugitive household/indoor dust Ingestion of contaminated vegetables & attached soil Inhalation of vapours or gases outside Inhalation of vapours/gases inside. Groundwater	Wider public Groundwater	Acceptable	Dwellings have been present over the nursery area since at least 1899. Fuel and pesticide residues in that area would not be expected to have persisted.

8 CONTAMINATION RISK ASSESSMENT (QUALITATIVE)

8.1 The conceptual model suggests plausible contaminant linkages between sources and receptors. The potential risks have been assessed in terms of being:

- (1) Acceptable,
 - (2) Acceptable following further assessment,
 - (3) Acceptable following remediation,
 - (4) Unacceptable.
- as follows:

8.2 The risks from made ground being present cannot be assessed at this point however, we suspect that made ground is present as the backfill to the brick retaining wall on the western garden boundary.

8.3 Contamination of made ground by burned construction waste is typical for buildings of this period and we would expect to see some tarry combustion residues in the garden soils as well as metals such as Copper, Lead and Zinc. We also suspect that Lead concentrations in these soils could be further elevated by fallout of Lead Oxide particles from leaded fuel use in vehicles in this urban area.

8.4 The risks posed by the historic dairy immediately to the east of the site and the nurseries shown to the south and west were not considered to be plausible. Both were shown on the 1878 map only.

8.5 The potential for contamination to persist on the site from either of these two sources is limited by the time period over which we would expect phenol based disinfectants and fuel oil to have degraded or volatilised. Water soluble metalloid pesticides would have washed away with rainfall and would not be expected to persist in open soil for this long.

Recommendations

- 8.6 We would recommend that the small amount of exposed soil in the garden area should either be tested for Lead and tar combustion residues (PAH or Poly-cyclic Aromatic Hydrocarbons) or the soils could simply be removed to a depth of 600mm and replaced with clean imported (and certified) soil.

Imported Soil

- 8.7 The soil for the layers described above should be uncontaminated however, the topsoil layer should also comply with BS3882, Multipurpose Soil, with regard to its grain size and organic material content.
- 8.8 Topsoil suppliers should use a quality control system for the soils they are handling and should be able to provide some evidence of ongoing testing and the results. They may also be able to provide delivery specific soil analysis to demonstrate that the soil supplied is fit for purpose. If this is not the case then further analysis may be required.

9 NOTES

- 9.1 The comments given in the report and the opinion expressed herein are based on the information sourced by the desk study and other published information. Third party information was therefore used in the preparation of this report and Terramech Investigations Ltd. cannot guarantee the accuracy or completeness of this information.
- 9.2 There may be other sources of information not included in those listed that hold data relevant to the Desk Study undertaken at the site that could materially affect the conclusions made in this report. The interpretation of the maps and/or other data commented on in this report is subjective.

9.3 In the unlikely event that unexpected areas of contaminated soil are noted during the development, such as a localised waste pit or an area impacted by fuel or hydraulic oil, then the Local Authority and Terramech should be informed as soon as possible to assess the situation.

9.4 The conclusions in this report represent our professional opinion, these conclusions have been drawn up with the greatest care to ensure that all apparent issues were addressed properly in accordance with applicable UK guidance and accepted practice.

Geology 1:50,000 Maps

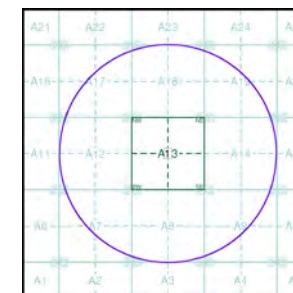

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Terramech Investigations Ltd

Artificial Ground and Landslip

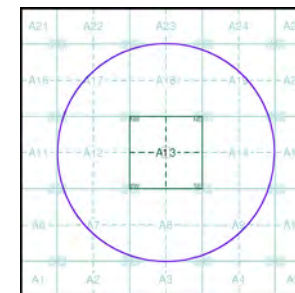

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Terramech Investigations Ltd

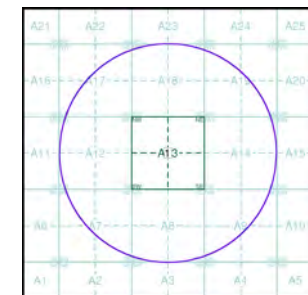

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Terramech Investigations Ltd

Bedrock and Faults

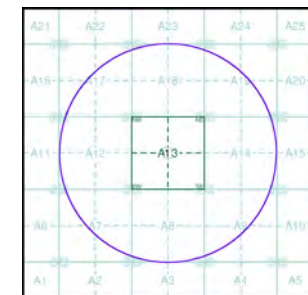

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

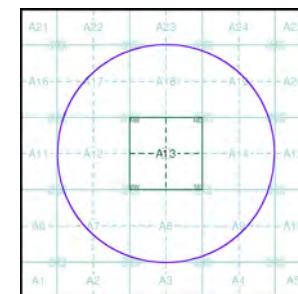

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Published 1882
Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

Published 1948 - 1949

Source map scale - 1:10,560

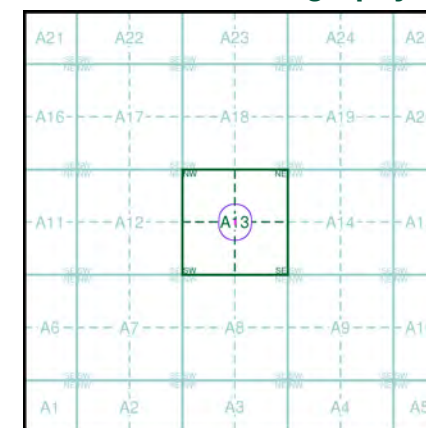

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Published 1990
Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

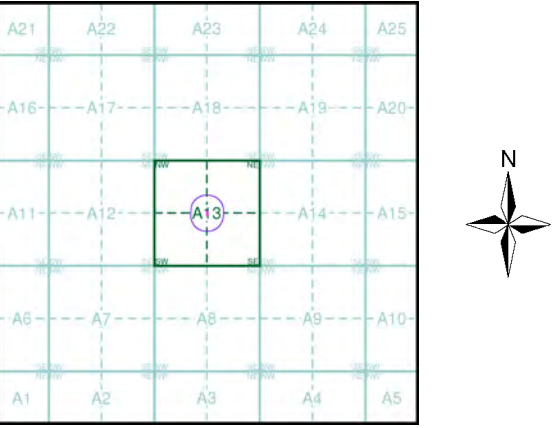

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2019

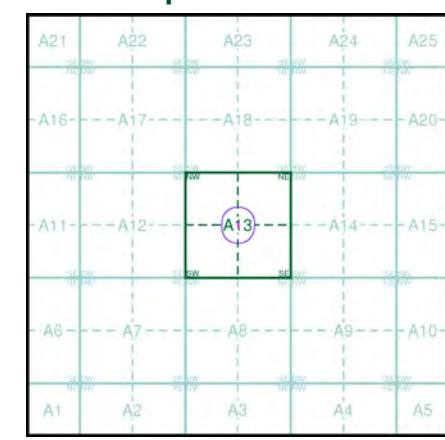

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Berkshire
Published 1879 - 1880
Source map scale - 1:500

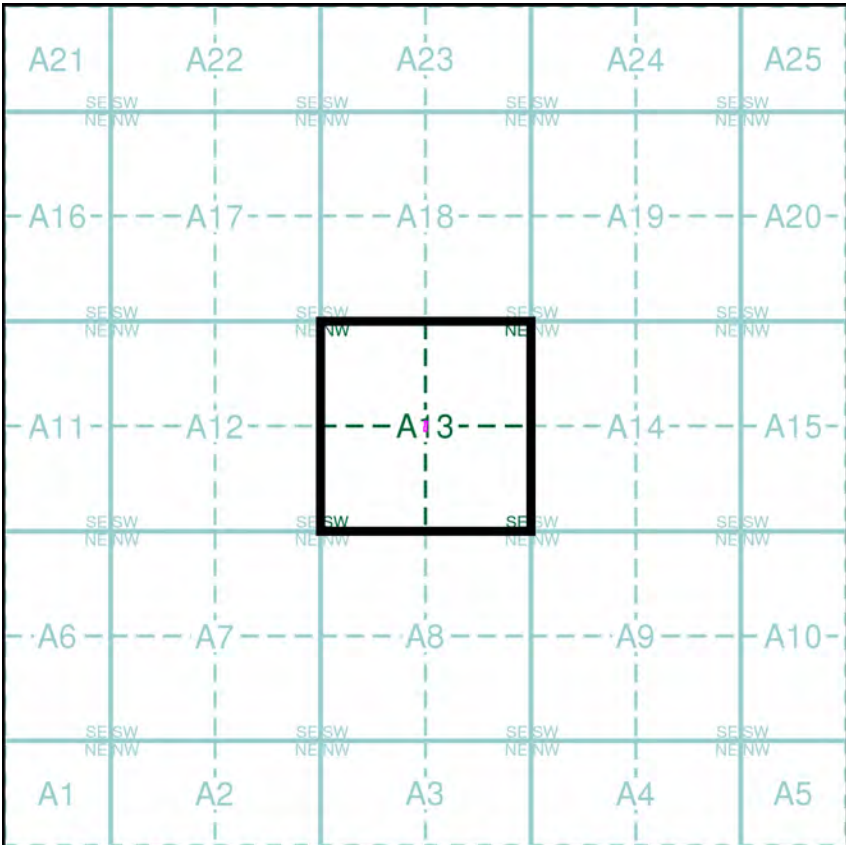

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.

For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Report Section and Details	Page Number
Summary	-
The Summary section provides an overview of the data contained within the report, detailing the number of data set features or the existence of a data set in relation to the buffer selected. For ease of reference, the report is broken down into 4 sections of data; Mining and Natural Cavities Data, Historical Land Use Information (1:2,500), Historical Land Use Information (1:10,000) and Ground Stability Data (1:50,000).	
Mining and Natural Cavities Data	1
The Mining and Natural Cavities Data section features data sets related to the existence of mining areas and their potential hazards; and details of naturally formed cavities. Data sets within this section are not plotted, with the exception of BGS Recorded Mineral Sites and Potential Mining Areas which feature on the Historical Land Use Information (1:10,000) map.	
Historical Land Use Information (1:2,500)	-
The Historical Land Use Information (1:2,500) section contains data captured from analysis carried out by Landmark of 1:1,250 and 1:2,500 scale historical Ordnance Survey mapping, identifying areas where, historically, the land uses were potentially contaminative. For the purpose of this Envirocheck module, only historical data relating to mining and ground stability has been included and plotted on the corresponding Historical Land Use Information (1:2,500) map. This section also includes the Subterranean Features data set, which details various man-made and man-used underground spaces obtained from the Subterranea Britannica society.	
Historical Land Use Information (1:10,000)	11
The Historical Land Use (1:10,000) section covers data captured from the systematic analysis carried out by Landmark of 1:10, 560 and 1:10,000 scale historical Ordnance Survey mapping dating back to the mid-19th century, identifying potentially contaminative past industrial land uses. For the purpose of this Envirocheck module, only data relating to mining and ground stability has been included and plotted on the accompanying Historical Land Use Information (1:10,000) map.	
Ground Stability Data (1:50,000)	13
The Ground Stability (1:50,000) section includes the BGS Geosure data suite, reporting features to 250m and plotted onto 3 separate maps. Also reported is brine subsidence, brine mining and salt mining data sets, of which Brine Pumping and Salt Mining Related Features are plotted, and subsidence insurance claims and insurance investigations data, which is not plotted.	
Historical Map List	14
The Historical Map List section details the historical mapping that has been analysed for your site, in relation to the Historical Land Use Information sections.

Mining and Cavities Data	Version	Update Cycle
BGS Recorded Mineral Sites British Geological Survey - National Geoscience Information Service	April 2019	Bi-Annually
Coal Mining Affected Areas The Coal Authority - Property Searches	March 2014	Annual Rolling Update
Man Made Mining Cavities Peter Brett Associates	October 2018	Bi-Annually
Mining Instability Ove Arup & Partners	October 2000	Not Applicable
Natural Cavities Peter Brett Associates	October 2018	Bi-Annually
Non Coal Mining Areas of Great Britain British Geological Survey - National Geoscience Information Service	May 2015	Not Applicable
Historical Land Use Information (1:2,500)	Version	Update Cycle
Subterranean Features Landmark Information Group Limited	March 2019	Bi-Annually
Ground Stability Data (1:50,000)	Version	Update Cycle
CBSCB Compensation District Cheshire Brine Subsidence Compensation Board (CBSCB)	August 2011	Not Applicable
Potential for Collapsible Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Compressible Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Ground Dissolution Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Landslide Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Running Sand Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Shrinking or Swelling Clay Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Subsidence Insurance Claims SP Property Services	October 2018	Quarterly
Subsidence Investigations CET Structures Ltd	July 2018	Quarterly
Brine Subsidence Solution Area Johnson Poole & Bloomer	January 2015	Annual Rolling Update
