Appendix E - BGS Borehole Logs
Appendix F - Legislative and Planning Framework

EXECUTIVE SUMMARY

The site currently comprises a three storey, L-shaped, brick clad, concrete framed, office building with associated service roads and multi-storey (4 split levels) car parking. The site is approximately 0.44 hectares in plan area and is bounded by residential and retail properties to the south and east, a multi-storey car park and commercial units to the north and north-east, and a recently demolished and cleared construction site proposed for residential redevelopment to the west. The office building is to be converted to a residential end use under a prior approval application under permitted development rights. The site layout will not change; only the interior of the building will be altered to accommodate the proposed residential use.

This Preliminary Risk Assessment (PRA) has been undertaken to develop a preliminary conceptual site model identifying potential ground contamination risks, to evaluate the likely significant risks.

It should be noted that this executive summary does not form a standalone document and should be read in conjunction with the WSP Preliminary Risk Assessment (Ref: 70034191-0011).

ENVIRONMENTAL SETTING

The ground profile at the site is likely to comprise Made Ground overlying Taplow Gravel Member and the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated) in sequence.

The Taplow Gravel Member is classified as a Secondary (A) Aquifer and the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated) as a Principal Aquifer.

Groundwater has been encountered in only two of the five BGS boreholes reviewed, at depths between 6.10m bgl and 9.30m bgl within the Newhaven Chalk Formation (undifferentiated).

The River Kennet is located approximately 675m south-east of the site at its closest point and flows in a north-eastern direction towards the River Thames. The River Kennet splits into two through Reading with part of it forming the Kennet and Avon Canal which is likely to be lined. This part of the river is the nearest point to the site. The River Kennet was given a River Quality B rating in the year 2000. The River Thames is located 1.2km north of the site at its closest point.

POTENTIAL FOR GROUND CONTAMINATION

Potential on-site sources of contamination have been identified at the current site associated with the historical provision warehouse and wallpaper warehouse and an electrical plant building located on-site.

Potential off-site sources of contamination include, unknown infilled land (land and water), current and historical petrol filling stations and surrounding current and historical industrial land uses.

Plausible contaminant linkages have been identified with respect to human health predominantly relating to potential inhalation of asbestos fibres and inhalation of/contact with ground gas/vapours. During and following the redevelopment of the site receptors would include construction/maintenance workers and future site users (residents). As no ground will be broken as a result of the proposed works, dermal contact, inhalation or ingestion of soils and dust is not considered to be a plausible contaminant linkage, therefore this risk is avoided. However, the risk of contact with asbestos in the building remains.

Plausible contaminant linkages identified to controlled waters include the possibility of leaching of contaminants from the unsaturated zone, lateral migration of contaminants in surface water on to, and off of the site and lateral migration of contaminated groundwater from up gradient off-site sources on to the site.

Under the proposed change development potential receptors were identified as:

- Current and future site users;
- Neighbouring site users;

- Construction and maintenance workers;
- Groundwater in the Taplow Gravel Member (Secondary (A) Aquifer) and Newhaven Chalk Formation (undifferentiated) (Principal Aquifer);
- River Kennet and unnamed inland river;
- Site structures, particularly foundations, of existing buildings; and
- Water supply pipes.

WSP considers that the main contamination risk at the site arises from the presence of asbestos in a small number of locations in the building, as stated in the asbestos management plan. There is limited potential for contamination arising from Made Ground associated with the historical warehouses on-site, however as no ground will be broken as a result of the proposed works, this risk is avoided.

In conclusion, the preliminary risk assessment indicates generally a **low** risk to human health, apart from a **moderate** risk to construction workers during the building refurbishment due to the presence of asbestos. We note this risk will be minimised through the implementation of an Asbestos Management Plan. There is a low risk to controlled waters and site structures.

RECOMMENDATIONS

WSP recommends the following is undertaken as part of the planning and design process for the site:

- An appropriate asbestos survey and asbestos management during the refurbishment of the building.

During the refurbishment works if ground is broken, WSP recommend that appropriate measures are undertaken by the contractor to mitigate the risk of contact with potentially contaminated ground, however no ground will be broken as a result of the proposed works.

It should be noted that this assessment has been carried out assuming that none, or very limited, intrusive groundworks are intended at this site. If the proposed refurbishment alters in scope this assessment would not be appropriate.

1 INTRODUCTION AND OBJECTIVES

1.1 AUTHORISATION AND PURPOSE OF ASSESSMENT

WSP was instructed by Montagu Evans LLP (“the client”) to undertake a Preliminary Risk Assessment (PRA) at Eaton Court, 104-112 Oxford Road, Reading, Berkshire, RG1 7FU (“the site”) as shown **Figure 1**, in **Appendix A.1**.

1.2 PROPOSED SCHEME

The site currently comprises a three storey, L-shaped, brick clad, concrete framed, office building with associated service roads and multi-storey (4 split levels) car parking. The site is approximately 0.44 hectares in plan area and is bounded by residential and retail properties to the south and east, a multi-storey car park and commercial units to the north and north-east, and a recently demolished music showroom (Richer Sounds) and former warehouse to the west.

The office building is to be converted to a residential end use under a prior approval application under permitted development rights. The site layout will not change; only the interior of the building will be altered to accommodate the proposed residential use.

1.3 OBJECTIVES

The key objectives of this assessment are to:

- Develop a preliminary conceptual site model (CSM) to identify potential ground contamination risks associated with the site;
- Evaluate the likely significance of risks associated with potential ground contamination through a contaminant linkage assessment for the proposed residential end use; and

1.4 SCOPE OF WORKS

The scope of works undertaken in this assessment comprised:

- A request for all service plan information and the location/integrity of drainage, interceptors, tanks and other site uses such as storage of raw materials and the presence of substations, etc.;
- A site walkover survey of accessible areas documenting the current land use and site setting;
- Provision and review of a Landmark Envirocheck Report;
- Review of regulatory databases and the local council planning website and informal enquiries with the Environment Agency and Contaminated Land Officer;
- Review of relevant publicly available information relating to hydrological features, hydrogeology, neighbouring land use, ecologically sensitive uses and geology in order to establish the environmental setting of the site and sensitivity of the location;
- Development of a preliminary Conceptual Site Model (CSM) via the source-pathway-receptor contaminant linkage approach; and
- An outline assessment of environmental risks with respect to ground, groundwater and ground gas conditions associated with the proposed change of use of the site.

This report has been prepared in general accordance with:

- Part 2A, Environmental Protection Act 1990;
- Environment Agency ‘Model Procedures for the Management of Land Contamination’, CLR11. 2004; and
- The National Planning Policy Framework.

The report contains British Geological Survey (BGS) materials NERC 2014, and Environment Agency (EA) information

1.5 LIMITATIONS

This report is addressed to and may be relied upon by the client (Montagu Evans LLP). It may not be relied upon or transferred to any other parties without the express agreement of WSP in writing. The report should be read and used in full. No responsibility will be accepted where this report is used, either in its entirety or in part, by any other party. WSP cannot be held liable for third party information.

The limitations of this assessment are attached in **Appendix B**.

This assessment has been carried out assuming that no, or very limited, intrusive groundworks are intended at this site. If the proposed refurbishment alters in scope this assessment would not be appropriate

2 SITE RECONNAISSANCE

2.1 SITE DESCRIPTION

The site location is provided as **Figure 1 (Appendix A.1)** and a site layout plan as **Figure 2 (Appendix A.2)**. A site visit was carried out by WSP on Tuesday 23 October 2018 under the direction of the facility manager and a photographic record of key on-site observations is provided in **Appendix C**.

Table 1 - Site Information provides information relating to the site obtained from a review of Ordnance Survey (OS) mapping, online aerial photography, the site walkover and relevant regulatory information contained within the Envirocheck Report.

Table 1 - Site Information

Details	Description
Name and address of site	Eaton Court, Oxford Road, Reading
Grid reference	470890, 173430
Size	0.44 Ha
Site description and current use	The site currently comprises a three storey, L-shaped, brick clad, concrete framed, office building (Photos 1 and 2) with associated service roads (Photo 3) and multi-storey (4 split levels) car parking (Photos 4 and 5). The offices are occupied by various businesses and government services including Bottomline Technologies, the Crown Prosecution Service and the Department of Work and Pensions. Generally, the buildings is occupied by office spaces with associated WCs, kitchens, plant rooms, riser cupboards, lifts, chiller room, etc (Photo 6 and 7). All plant appeared to be well maintained, the offices and plant rooms were clean and tidy and there was no visual evidence of spills, leaks or pollution incidents.
Ground cover	The majority of the site is covered by the office building, the multi-storey car park and hardstanding. Soft landscaped areas with planting and some large mature trees were noted near the entrance on the northern boundary (Photo 3), on the eastern boundary along Eaton Place, in the centre of the site to the south of the multi-storey car park, within a small internal courtyard, and on the southern boundary along Oxford Road (Photo 8). The footprint of the office building comprises approximately 40% of the site whilst the car parking and soft landscaped areas comprise approximately 50% and 10%, respectively.
Trees and invasive species	No invasive species were noted during the site walkover.
Topography	The site is generally flat and level. The undercroft level of the multi-storey car park on site was approximately 0.5m below surrounding ground level.
Bulk material storage	No storage tanks or associated fuel storage was noted on-site and the facilities manager confirmed the absence of fuel storage tanks

	- all heating/cooling and power is supplied via gas (Photos 9 and 10) and electricity (Photo 11).
Polychlorinated biphenyls (PCBs)	An SSE electrical plant building was noted in the centre of site, adjacent to the car (Photo 12). It is likely to be well maintained by the operator. A large electrical cabinet was present in the centre of the building, which was locked and could not be accessed. It did not appear to be an electrical substation and was considered likely to contain electrical switching gear for the site. In addition, it is unlikely, due to the age, that PCBs will be present (Photo 13).
Waste storage	Rubbish is stored in large bins (recyclables and mixed waste) that are collected regularly. No liquid wastes are generated by the site. An oil/water separator was noted (three access covers in a row) in the centre of the site (Photo 14). The facilities manager had not been aware of its presence and there was no maintenance plan in place for emptying or maintenance of the interceptor.
Asbestos containing materials (ACMs)	The Asbestos management plan was consulted prior to the walkover (Photo 15, 16, 17 and 18). Asbestos has been identified within the building in a small number of isolated locations; no removal works have been undertaken.
Nearby features	North: An office building occupied by Bottomline Technologies (an IT company), a vacant, recently refurbished office, and associated car parking (Photo 19). East: Recently constructed high rise apartments and a multi-storey car park, assorted small businesses (Photo 20). West: Recently demolished music showroom (Richer Sounds) and warehouse (Photo 21). South: Assorted small, local businesses in terraces with residential accommodation in the upper floors.

3 HISTORICAL POTENTIALLY CONTAMINATIVE LAND USES

3.1 SITE HISTORY

The history of the site and local environs has been reviewed and determined with reference to Ordnance Survey maps contained within the Envirocheck Report (Ref: 182742962_1_1). A study has been undertaken to identify potentially contaminative former land uses. The following section provides a summary of this information and the Envirocheck Report is attached as **Appendix D**.

ON-SITE

Table 2 - On-site historical map review

Date of Mapping	Scale	Feature
1879	1:2,500	Properties and gardens are noted in the west and east of the site. Undeveloped land appears to be present in the centre. Trees are denoted to be present in the centre
1883	1:10,560	No apparent change.
1899	1:2,500	A small shed of building is noted in the north-west of the site.
1900	1:10,560	No apparent change.
1901	1:10,560	No apparent change.
1912	1:2,500	No apparent change.
1913	1:10,560	No apparent change.
1931	1:2,500	Small sheds or buildings are noted in the south and south-east of the site.
1933	1:10,560	No apparent change.
1938	1:10,560	No apparent change.
1959	1:1,250	A warehouse is noted encompassing the eastern half of the site.
1961	1:2,500	No apparent change.
1962	1:10,000	No apparent change.
1971	1:1,250	The aforementioned warehouse is now noted as a provision warehouse. A wallpaper warehouse is also noted encompassing the majority of the western half of the site.
1973	1:10,000	No apparent change.
1977	1:1,250	No apparent change.
1979	1:10,000	No apparent change.
1986	1:1,250	No apparent change.
1990	1:10,000	The layout of the site is the same as its current use.
1993	1:1,250	No apparent change.
1995	1:10,000	No apparent change.
1999	1:10,000	No apparent change.
2006	1:10,000	No apparent change.
2018	1:10,000	No apparent change.

OFF-SITE

Table 3 - Off-site historical features within 250m

Name	Direction	Approx. Distance (m)	Years feature observed
Holy Trinity Church	S	Adjacent	1879 to present
Residential Properties	N, E, S	Adjacent to 500m	1879 to present
Works	N	10	1959 to 1977
Yard	NW	50	1959 to 1962
Multistorey Car Park	NE	50	1971 to present
A329 main road	E	150	1970 to present
Bus Depot and Garage	NE	200	1957 to 1986 1986 to present
Garage	E	200	1957 to 1986
Broad Street Mall	SE	200	1973 to present
Tank	W	200	1971 to present
Electricity Substation	W	200	1971 to present
Coach Manufactory Civic Centre	SE	250	1879 to 1899 1988 to present
Saw Mills/Timber Yard	E	250	1879 to 1931
Builders Yard	NE	300	1969 to present
Engineering Works	S	300	1971 to present
Warehouse	SE	350	1957 to 1970
Railway Line	NW	500	1883 to present

Numerous residential properties, shops, schools and nurseries are noted between 50m and 500m of the site in all directions.

4 ENVIRONMENTAL SETTING

4.1 GEOLOGY AND HYDROGEOLOGY

The British Geological Survey (BGS) Map Sheet 268 – Reading (1:50,000, 1996) has been reviewed and the underlying geology is present in **Table 4** together with EA aquifer designations for the relevant geological units.

Table 4 - Geological Mapping Summary

Geological unit	Location on-site	Description ¹	Aquifer designation
Made Ground	Entire Site	Unknown – can be variable.	Not Designated
Taplow Gravel Member	Entire site underlying the Made Ground	Sand and gravel, locally with lenses of silt, clay or peat.	Secondary (A) Aquifer
Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated)	Entire Site underlying the Made Ground and Taplow Gravel Member.	Has been described in historic BGS borehole logs as: Structureless CHALK composed of sandy very clayey GRAVEL. (Grade Dc).	Principal Aquifer

A number of BGS boreholes are located within 200m of the site. A selection of these boreholes have been reviewed below. These boreholes general confirm the expected on site sequence. The depth and thickness of the strata encountered are summarised in **Table 5** and, the locations are presented on **Figure 2 - Appendix A.2** and the logs are attached in **Appendix E**.

Table 5 - BGS Borehole Summaries

Borehole	Location	Strata encountered	From – to depth (m bgl)	Water Strike (m)
SU77SW1092 (BH07)	55m NE	Brown slightly sandy gravel gravelly clay. (MADE GROUND)	0 – 2.50	
		Medium dense brown clayey very sandy subangular to subrounded fine to coarse GRAVEL of mudstone, limestone and flint.	2.50 – 3.50	
		Very dense brown and cream clayey very sandy angular to subangular GRAVEL of flint and chalk.	3.50 – 5.00	
		Structureless CHALK composed of cream slightly gravelly sandy CLAY. (Grade Dm)	5.00 – 9.50	

¹ BGS Lexicon (last viewed 21/07/2017 : <http://www.bgs.ac.uk/Lexicon/>)

Borehole	Location	Strata encountered	From – to depth (m bgl)	Water Strike (m)
		Structureless CHALK composed of angular to subangular fine to coarse gravel. (Grade Dc)	9.50 – 10.50	9.50
SU77SW1090 (BH05)	75m NE	Brown slightly clayey very sandy gravel. (MADE GROUND)	0 – 4.70	None recorded.
		Structureless CHALK composed of sandy very clayey GRAVEL. (Grade Dc)	4.70 – 10.50	
SU77SW1104 (BH03R)	90m NE	MADE GROUND.	0 – 1.20	6.10
		SAND and GRAVEL.	1.20 – 5.60	
		Structureless CHALK composed of slightly sandy clayey angular to subangular GRAVEL and COBBLES. (Grade Dc)	5.60 – 15.00	
		Weak to moderately weak, medium to high density white CHALK. Bands of flints noted throughout.	15.00 – 47.50	
SU77SW1110 (BH09R)	90m E	MADE GROUND.	0 – 0.40	None recorded.
		Clayey GRAVEL.	0.40 – 3.50	
		Weak CHALK. Highly weathered with flint.	3.50 – 10.00	
		Structureless CHALK composed of slightly sandy clayey angular of subangular GRAVEL and COBBLES. (Grade Dc)	10.00 – 16.40	
		Weak to moderately weak, high density white CHALK. Bands of flints noted throughout. (Grade B2/3)	16.40 – 30.40	
SU77SW1105 (BH04R)	120m NW	MADE GROUND	0 – 0.50	
		Dense SAND and clay bound GRAVEL.	0.50 – 1.20	
		SAND and GRAVEL with cobbles.	1.20 – 3.50	

Borehole	Location	Strata encountered	From – to depth (m bgl)	Water Strike (m)
		Clay bound GRAVEL of flint and weathered chalk.	3.50 – 3.70	None recorded.
		Structureless CHALK composed of slightly sandy clayey angular to subangular GRAVEL. (Grade Dc)	3.50 – 17.00	
		Weak to moderately weak, medium to high density CHALK. Bands of flints noted throughout. (Grade A/B3)	17.00 – 50.00	

There is one groundwater extraction point within 500m of the site. The extraction point located 284m east of the site is operated by Primark Stores Limited for retail purposes. Five other groundwater abstraction wells are located within 1km of the site, between 596m and 783m north-west, north and east of the site.

4.2 HYDROLOGY

The River Kennet is located approximately 675m south-east of the site at its closest point and flows in a north-eastern direction towards the River Thames. The River Kennet splits into two through Reading with part of it forming the Kennet and Avon Canal which is likely to be lined. This part of the river is the nearest point to the site. The River Kennet was given a River Quality B rating in the year 2000. The River Thames is located 1.2km north of the site at its closest point.

In addition to the River Kennet, the OS Water Network Map notes an inland river 406m north of the site.

The site is considered a low risk (Flood Zone 1) (1 in 1000 year) of surface water flooding. Areas of medium (Flood Zone 2) to high risk (Flood Zone 3) (1 in 100 year to 1 in 30 year) of surface water flooding are located approximately 200m north and 400m south-east of the site.

BGS groundwater flooding susceptibility model indicates the site has the potential for groundwater flooding at surface level.

The boundary of an EA Source Protection Zone 3 (SPZ) is located approximately 1000m east of the site.

No current surface water abstractions are located within 500m of the site.

4.3 PRELIMINARY HYDROGEOLOGICAL MODEL

The ground profile at the site is likely to comprise Made Ground overlying Taplow Gravel Member and the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated) in sequence.

The Taplow Gravel Member is classified as a Secondary (A) Aquifer and the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated) as a Principal Aquifer.

Groundwater has been encountered in only two of the five BGS boreholes reviewed, at depths between 6.10m bgl and 9.30m bgl within the Newhaven Chalk Formation (undifferentiated).

Groundwater is expected to be encountered within fractures and the soluble matrix within the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated). It is also possible groundwater could be encountered within the Taplow Gravel Member. It is anticipated that the hydraulic gradient of the underlying groundwater is towards the north-east.

4.4 LANDFILLING AND MINERAL EXTRACTION

There are no recorded current or historic landfills on-site, or within 500m of the site.

One potentially infilled land (non-water) has been recorded within 500m of the site, unknown filled ground (pit, quarry etc.). Two potentially infilled land (water) have been recorded within 500m of the site, both unknown filled ground (pond, marsh, river, stream, dock etc.)

4.5 RADON

The BGS indicates that the site is in a lower probability radon area as less than 1% of homes are above the Action Level. No radon protection measures are necessary in the construction of new dwellings or extensions.

5 REGULATORY CONSULTATION

5.1 REGULATORY INFORMATION

Information relating to various regulatory controls has been taken from the Envirocheck Report, which is presented in **Appendix D**. The potential for hazardous materials to impact upon the ground conditions, surface or groundwater on site are summarised below within **Table 6**.

Table 6 - Regulatory Information

Environmental Data	Distance from site (within 500m)	Details	Potential risk
Contaminated land register entries and notices	392m north-west	Remediation Statement and Remediation Work Completed of George Street Allotments, George Street, Reading, RG1 7NT in February 2011.	No
Discharge Consents	402m south	Thames Water Utilities Ltd, discharge of sewage from the pumping station into Holy Brook (channel of the River Kennet). Discharge consent understood to have been withdrawn.	No
	427m north	Reading Transport Ltd, discharge of trade effluent into abattoir ditch.	No
	457m north-west	Network Rail Infrastructure Ltd, discharge of trade effluent into groundwater a tributary of the River Thames.	No
Local Authority Pollution Prevention and Controls	23m south-east Permitted	Hobbs of Reading, PG6/46 Dry cleaning. The Trade Directory Entries lists the business as inactive.	No
	384m west Permitted	Oxford Road Service Station (Texaco), PG1/14 Petrol filling station.	Yes
	429m south-west Permitted	Tilehurst Connect Service Station, PG1/14 Petrol filling station.	Yes
Integrated Pollution Prevention and Controls	N/A	No entries were recorded within 500m of the site	No
Pollution Incidents to Controlled Waters	398m south	1999, Category 3 – Minor Incident, chemicals (unknown) spilt into a not given receiving water.	No
	399m south	1997, Category 3 – Minor Incident, chemicals (unknown) spilt into a not given receiving water.	No

	403m south	1997, Category 3 – Minor Incident, oils (unknown) spilt into a not given receiving water.	No
	404m south	1996, Category 3 – Minor Incident, oils (unknown) spilt into a not given receiving water.	No
	408m south	1995, Category 3 – Minor Incident, miscellaneous (urban runoff) spilt into a not given receiving water.	No
	409m south	1996, Category 3 – Minor Incident, miscellaneous (other) spilt into a not given receiving water.	No
	470m south-east	1997, Category 3 – Minor Incident, oils (unknown) spilt into a not given receiving water.	No
Substantiated Pollution Incident Register	386m north-west	2007, oils (unknown), Water Impact: Category 3 – Minor Incident, Air Impact: Category 4 - No Impact, Land Impact: Category 2 - Significant Incident	No
Trade Directory Entries	0-100m Active	Joinery manufacturers and a printers.	Yes
	0-100m Inactive	Garages, car dealerships, tyre dealers, butchers, printers, restaurant, dry cleaners and a printers.	Yes
	100-250m Active	Printers, stained glass designers and producers, garages, commercial cleaning services, water cooler company, and a cash registers and check-out equipment company.	Yes
	100-250m Inactive	Waste disposal services, telecommunications equipment and systems, cable and wire equipment manufacturers, printers, transformer manufacturers, commercial cleaning services, and photographic processors.	Yes
	250-500m Active	Waste disposal services, pest and vermin control, carpet, curtain and upholstery cleaners, MOT testing centres, garages, tyre dealers, petrol filling stations, and car breakdown and recovery services.	Yes
	250-500m Inactive	Garages, car body repair, printers, cargo handling services,	Yes

		domestic cleaning services, concrete reinforcements, sheet metal works, engine rebuilding and reconditioning, bookbinding and equipment, printers, MOT testing centres, office furniture and equipment, used car dealers, tool design, manufacturers and makers, copying and duplicating services, electrical goods sales, manufacturers and wholesalers, bus and coach operators, tyre dealers, jewellery manufacturers and repairers, dry cleaners, photographic processors, manufacturers and suppliers of bags, belts and accessories, electrical engineers, medical equipment maintenance and repairs, petrol filling stations, distribution services, builders' merchants, perfume suppliers, and glass fibre moulding.	
Control of major accident hazards sites (COMAH)	N/A	No entries recorded within 500m of the site.	No
Registered radioactive substances	N/A	No entries recorded within 500m of the site.	No
Notification of installations handling hazardous substances	N/A	No entries recorded within 500m of the site.	No
Fuel station entries	107m east Obsolete	Obsolete Welldale Service Station	Yes
	355m west Obsolete	Obsolete Parsons Garage	Yes
	384m west Open	Krisco Reading Service Station	Yes
	423m south-west Open	Tilehurst Sf Connect	Yes

5.2 CORRESPONDENCE

CONTAMINATED LAND OFFICER (CLO)

Environmental Protection & Nuisance at Reading Borough Council was contacted on 15 October 2018. No response has yet been received. If pertinent information is found this report will be updated or the information will be sent as an addendum.

ENVIRONMENT AGENCY

The Environment Agency was contacted on 15 October 2018. No response has yet been received. If pertinent information is found this report will be updated or the information will be sent as an addendum to this report.

6 CONCEPTUAL SITE MODEL (CSM)

6.1 INTRODUCTION

The preliminary CSM is based upon the environmental conditions of the site as described in the previous sections.

The methods used within this assessment follow a risk-based approach; with the potential environmental risk assessed qualitatively using the 'source-pathway-receptor' contaminant linkage concept introduced in the guidance documents (principally the EA's CLR11) on the practical implementation of the Environmental Protection Act 1990.

Environmental risk can be defined as the combination of the consequence of a harmful effect and the probability of its occurrence. The existence of a contaminant linkage is primarily dependant on site usage and environmental conditions.

The environmental risk assessment has been carried out by identifying and evaluating the significance of the following:

- Potential Sources of Contamination: these include any actual or potentially contaminating materials and activities, located either on or in the vicinity of the site;
- Potential Pathways for Contamination Migration: these are the routes or mechanisms by which contaminants may migrate from the source to the receptor; and
- Potential Receptors of Contamination: these include present or future land users, activities or persons at the site.

The preliminary CSM was developed based on a proposed residential end use at the site. A summary of the applicable legislative and planning framework for the assessment is presented in **Appendix F**.

Table 7 provides a key to the potential pathways and receptors identified at the site. The on-site preliminary CSM is presented in **Table 8**, and the off-site CSM in **Table 9**.

Table 7 - Potential Pathways

Recept or Type	Receptors	Potential Pathways			
		On-site contaminant source	On-site ID	Off-site contaminant source	Off-site ID
Human Health	Site users (current and future) and maintenance workers	– Dermal contact with contaminated soils and waters – Inhalation of contaminated soils, waters and vapours/ ground gas – Ingestion of contaminated soils and waters	1	– Inhalation of contaminated soils, waters and ground /landfill gas – Ingestion of contaminated soils in airborne dust	6
	Neighbouring site users	– Inhalation of contaminated soils, waters and ground gas – Ingestion of contaminated soils in airborne dust	2	Not relevant	NA
Ground water	Newhaven Chalk Formation (undifferentiated).	– Leaching of contaminants from soils – Migration of contamination in groundwater – Migration of immiscible contaminants	3	– Migration of contaminated groundwater, surface water or immiscible contaminants	7

Recept or Type	Receptors	Potential Pathways			
		On-site contaminant source	On-site ID	Off-site contaminant source	Off-site ID
		– Infiltration of contaminated surface water			
Surface Water	The River Kennet and an unnamed inland river	– Runoff of contaminated surface water – Migration of immiscible contaminants	4	– Migration of contaminated groundwater, surface water or immiscible contaminants	8
Building Structures	Buried concrete and water supply pipes	– Direct contact with contaminated soils, groundwater or immiscible contaminants	5	– Migration of contaminated groundwater, surface water or immiscible contaminants	9

Table 8 - On-site conceptual site model

Location	Source	Potential Contaminants	Pathway ID (Table 9)	Comment on Hazard Realisation	Risk Rating
Site wide	Buildings	Asbestos	1 and 2	- The asbestos management plan states that asbestos is present in a small number of isolated locations within the building. - Possibility of inhalation of asbestos fibres during current site use or future construction or maintenance works as removal works are not thought to have occurred.	MODERATE
Site wide	Made Ground associated with previous use as a provision warehouse and wallpaper warehouse	A wide range of potential contaminants, depending on the source of material, but may include asbestos, metals, cyanide, TPH and PAH. There is the potential for ground gas generation from the Made Ground	1-5	- Former phases of construction are known to have occurred on the site; - Made Ground is likely to be associated with former and current on-site structures (former warehouse and current office buildings). - It is unknown if any Made Ground is buried on site. - The proposed change of use in the building is not thought to require excavation. - No ground will be broken as a result of the proposed works.	LOW
Site wide	Historical use as a provision warehouse and wallpaper warehouse	A range of potential contaminants depending on the source of material but may include, Metals, TPH, BTEX, PAHs, PCBs, VOCs and SVOCs.	1-5	- The proposed change of use in the building is not thought to require excavation or any change to the exterior of the building. - No ground will be broken as a result of the proposed works. - Due to the former potential storage of either above ground or below ground petrol storage tanks there is the possibility of leaks and spills. Any leaks and spills are likely to be contained and cleaned up. - It is unknown if the site has been remediated during the construction of the offices in the early 1990s.	LOW

Table 9 - Off-site conceptual site model

Location	Source	Potential Contaminants	Pathway ID (Table 9)	Comment on Hazard Realisation	Risk Rating
107m east, 355m west, 384m west and 423m south-west	Current and historic petrol filling stations	Metals, TPH, BTEX, PAHs, VOCs and SVOCs.	6-9	- Leaks and spillages are likely to have occurred. - It is unlikely that the site will be impacted by any contaminated groundwater as no ground will be broken as a result of the proposed works.	LOW
458m south-west, 465m north-west and 495m north-east	Infilled land (non-water) and infilled land (water)	A wide range of potential contaminants, depending on the source of material, but may include asbestos, metals, cyanide, TPH and PAH.	6-9	- The specific nature and source of fill material is unknown, as well as exact location. - Migration of contamination to underlying Secondary (A) and Principal Aquifers. - The proposed change of use is not thought to require excavation and no ground will be broken as a result of the proposed works.	LOW
0-500m surrounding the site	Surrounding current and historical industrial land uses as outlined in Table 6.	A wide range of potential contaminants, depending on the source of material, but may include metals, cyanide, TPH, PAH, VOCs, SVOCs, PCBs, pesticides and pathogens.	6-9	- It is unlikely that the site will be impacted by any contaminated groundwater as no ground will be broken as a result of the proposed works. - No ground will be broken as a result of the proposed works. - It is unknown whether any remediation has been undertaken on surrounding sites. - Leaks and spillages are likely to have occurred, at the petrol stations, garages and engineering works. - The seven recorded pollution incidents generally occurred over 20 years ago.	LOW

7 CONCLUSIONS AND RECOMMENDATIONS

Based on the findings of this preliminary assessment, WSP makes the following conclusions in the context of the proposed development of the site to residential end use.

7.1 ENVIRONMENTAL SETTING

The ground profile at the site is likely to comprise Made Ground overlying Taplow Gravel Member and the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated) in sequence.

The Taplow Gravel Member is classified as a Secondary (A) Aquifer and the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated) as a Principal Aquifer.

Groundwater is expected to be encountered within fractures and the soluble matrix within the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated). It is also possible groundwater could be encountered within the Taplow Gravel Member.

The River Kennet is located approximately 675m south-east of the site at its closest point and flows in an north-eastern direction towards the River Thames.

7.2 POTENTIAL FOR GROUND CONTAMINATION

Potential on-site sources of contamination have been identified at the current site associated with the historical provision warehouse and wallpaper warehouse and an electrical plant building located on-site.

Potential off-site sources of contamination include, unknown infilled land (land and water), current and historical petrol filling stations and surrounding current and historical industrial land uses.

Plausible contaminant linkages have been identified with respect to human health predominantly relating to potential inhalation of asbestos fibres and inhalation of/contact with ground gas/vapours. During and following the redevelopment of the site receptors would include construction/maintenance workers and future site users (residents). As no ground will be broken as a result of the proposed works, dermal contact, inhalation or ingestion of soils and dust is not considered to be a plausible contaminant linkage, therefore this risk is avoided. The risk of contact with asbestos within the building remains.

Plausible contaminant linkages identified to controlled waters include the possibility of leaching of contaminants from the unsaturated zone, lateral migration of contaminants in surface water on to, and off of the site and lateral migration of contaminated groundwater from up gradient off-site sources on to the site.

Under the proposed change development potential receptors were identified as:

- Current and future site users;
- Neighbouring site users;
- Construction and maintenance workers;
- Groundwater in the Taplow Gravel Member (Secondary (A) Aquifer) and Newhaven Chalk Formation (undifferentiated) (Principal Aquifer);
- River Kennet and unnamed inland river;
- Site structures, particularly foundations, of existing buildings; and
- Water supply pipes.

WSP considers that the main contamination risk at the site arises from the presence of asbestos in a small number of isolated locations within the building, as stated in the asbestos management plan. There is limited potential for contamination arising from Made Ground associated with the former warehouses on-site, however as no ground will be broken as a result of the proposed works, this risk is avoided.

In conclusion, the preliminary risk assessment indicates generally a **low** risk to human health, apart from a **moderate** risk to construction workers during the building refurbishment due to the presence of asbestos. We note this risk will be avoided through the implementation of an Asbestos Management Plan. There is a low risk to controlled waters and site structures.

7.3 RECOMMENDATIONS

WSP recommends the following is undertaken as part of the planning and design process for the site:

- An appropriate asbestos survey and asbestos management during the refurbishment of the building.

During the refurbishment works if ground is broken, WSP recommend that appropriate measures are undertaken by the contractor to mitigate the risk of contact with potentially contaminated ground.

It should be noted that this assessment has been carried out assuming that none, or very limited, intrusive groundworks are intended at this site. If the proposed refurbishment alters in scope this assessment would not be appropriate

LIMITATIONS

REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

GENERAL

1. WSP UK Limited has prepared this report solely for the use of the Client and those parties with whom a warranty agreement has been executed, or with whom an assignment has been agreed and outlined in the body of the report.
2. Unless explicitly agreed otherwise, in writing, this report has been prepared under WSP UK Limited standard Terms and Conditions as included within our proposal to the Client.
3. Project specific appointment documents may be agreed at our discretion and a charge may be levied for both the time to review and finalise appointments documents and also for associated changes to the appointment terms. WSP UK Limited reserves the right to amend the fee should any changes to the appointment terms create an increase risk to WSP UK Limited.
4. The report needs to be considered in the light of the WSP UK Limited proposal and associated limitations of scope. The report needs to be read in full and isolated sections cannot be used without full reference to other elements of the report and any previous works referenced within the report.

PHASE 1 GEO ENVIRONMENTAL AND PRELIMINARY RISK ASSESSMENTS

Coverage: *This section covers reports with the following titles or combination of titles: phase 1; desk top study; geo environmental assessment; development appraisal; preliminary environmental risk assessment; constraints report; due diligence report; geotechnical development review; environmental statement; environmental chapter; project scope summary report (PSSR), program environmental impact report (PEIR), geotechnical development risk register; and, baseline environmental assessment.*

5. The works undertaken to prepare this report comprised a study of available and easily documented information from a variety of sources (including the Client), together with (where appropriate) a brief walk over inspection of the Site and correspondence with relevant authorities and other interested parties. Due to the short timescales associated with these projects responses may not have been received from all parties. WSP UK Limited cannot be held responsible for any disclosures that are provided post production of our report and will not automatically update our report.
6. The opinions given in this report have been dictated by the finite data on which they are based and are relevant only for the purpose for which the report was commissioned. The information reviewed should not be considered exhaustive and has been accepted in good faith as providing true and representative data pertaining to site conditions. Should additional information become available which may affect the opinions expressed in this report, WSP UK Limited reserves the right to review such information and, if warranted, to modify the opinions accordingly.
7. It should be noted that any risks identified in this report are perceived risks based on the information reviewed. Actual risks can only be assessed following intrusive investigations of the site.
8. WSP UK Limited does not warrant work / data undertaken / provided by others.

INTRUSIVE INVESTIGATION REPORTS

Coverage: *The following report titles (or combination) may cover this category of work: geo environmental site investigation; geotechnical assessment; GIR (Ground Investigation reports); preliminary environmental and geotechnical risk assessment; and, geotechnical risk register.*

REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

9. The investigation has been undertaken to provide information concerning either:
 - i. The type and degree of contamination present at the site in order to allow a generic quantitative risk assessment to be undertaken; or
 - ii. Information on the soil properties present at the site to allow for geotechnical development constraints to be considered.
10. The scope of the investigation was selected on the basis of the specific development and land use scenario proposed by the Client and may be inappropriate to another form of development or scheme. If the development layout was not known at the time of the investigation the report findings may need revisiting once the development layout is confirmed.
11. For contamination purposes, the objectives of the investigation are limited to establishing the risks associated with potential contamination sources with the potential to cause harm to human health, building materials, the environment (including adjacent land), or controlled waters.
12. For geotechnical investigations the purpose is to broadly consider potential development constraints associated with the physical property of the soils underlying the site within the context of the proposed future or continued use of the site, as stated within the report.
13. The amount of exploratory work, soil property testing and chemical testing undertaken has necessarily been restricted by various factors which may include accessibility, the presence of services; existing buildings; current site usage or short timescales. The exploratory holes completed assess only a small percentage of the area in relation to the overall size of the Site, and as such can only provide a general indication of conditions.
14. The number of sampling points and the methods of sampling and testing do not preclude the possible existence of contamination where concentrations may be significantly higher than those actually encountered or ground conditions that vary from those identified. In addition, there may be exceptional ground conditions elsewhere on the site which have not been disclosed by this investigation and which have therefore not been taken into account in this report.
15. The inspection, testing and monitoring records relate specifically to the investigation points and the timeframe that the works were undertaken. They will also be limited by the techniques employed. As part of this assessment, WSP UK Limited has used reasonable skill and care to extrapolate conditions between these points based upon assumptions to develop our interpretation and conclusions. The assumption made in forming our conclusions is that the ground and groundwater conditions (both chemically and physically) are the same as have been encountered during the works undertaken at the specific points of investigation. Conditions can change between investigation points and these interpretations should be considered indicative.
16. The risk assessment and opinions provided are based on currently available guidance relating to acceptable contamination concentrations; no liability can be accepted for the retrospective effects of any future changes or amendments to these values. Specific assumptions associated with the WSP UK Limited risk assessment process have been outlined within the body or associated appendix of the report.
17. Additional investigations may be required in order to satisfy relevant planning conditions or to resolve any engineering and environmental issues.
18. Where soil contamination concentrations recorded as part of this investigation are used for commentary on potential waste classification of soils for disposal purposes, these should be classed as indicative only. Due consideration should be given to the variability of contaminant concentrations taken from targeted samples versus bulk excavated soils and the potential variability of contaminant concentrations between sampling locations. Where major waste disposal operations are considered, targeted waste classification investigations should be designed.
19. The results of the asbestos testing are factually reported and interpretation given as to how this relates to the previous use of the site, the types of ground encountered and site conceptualisation. This does not however constitute a formal asbestos assessment. These results should be treated cautiously and should not be relied

REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

upon to provide detailed and representative information on the delineation, type and extent of bulk ACMs and / or trace loose asbestos fibres within the soil matrix at the site.

20. If costs have been included in relation to additional site works, and / or site remediation works these must be considered as indicative only and must be confirmed by a qualified quantity surveyor.

EUROCODE 7: GEOTECHNICAL DESIGN

21. On 1st April 2010, BS EN 1997-1:2004 (Eurocode 7: Geotechnical Design – Part 1) became the mandatory baseline standard for geotechnical ground investigations.
22. In terms of geotechnical design for foundations, slopes, retaining walls and earthworks, EC7 sets guidance on design procedures including specific guidance on the numbers and spacings of boreholes for geotechnical design, there are limits to methods of ground investigation and the quality of data obtained and there are also prescriptive methods of assessing soil strengths and methods of design. Unless otherwise explicitly stated, the work has not been undertaken in accordance with EC7. A standard geotechnical interpretative report will not meet the requirements of the Geotechnical Design Report (GDR) under Eurocode 7. The GDR can only be prepared following confirmation of all structural loads and serviceability requirements. The report is likely to represent a Ground Investigation Report (GIR) under the Eurocode 7 guidance.

DETAILED QUANTITATIVE RISK ASSESSMENTS AND REMEDIAL STRATEGY REPORTS

23. These reports build upon previous report versions and associated notes. The scope of the investigation, further testing and monitoring and associated risk assessments were selected on the basis of the specific development and land use scenario proposed by the Client and may not be appropriate to another form of development or scheme layout. The risk assessment and opinions provided are based on currently available approaches in the generation of Site Specific Assessment Criteria relating to contamination concentrations and are not considered to represent a risk in a specific land use scenario to a specific receptor. No liability can be accepted for the retrospective effects of any future changes or amendments to these values, associated models or associated guidance.
24. The outputs of the Detailed Quantitative Risk Assessments are based upon WSP UK Limited manipulation of standard risk assessment models. These are our interpretation of the risk assessment criteria.
25. Prior to adoption on site they will need discussing and agreeing with the Regulatory Authorities prior to adoption on site. The regulatory discussion and engagement process may result in an alternative interpretation being determined and agreed. The process and timescales associated with the Regulatory Authority engagement are not within the control of WSP UK Limited. All costs and programmes presented as a result of this process should be validated by a quantity surveyor and should be presumed to be indicative.

GEOTECHNICAL DESIGN REPORT (GDR)

26. The GDR can only be prepared following confirmation of all structural loads and serviceability requirements. All the relevant information needs to be provided to allow for a GDR to be produced.

MONITORING (INCLUDING REMEDIATION MONITORING REPORTS)

27. These reports are factual in nature and comprise monitoring, normally groundwater and ground gas and data provided by contractors as part of an earthworks or remedial works.
28. The data is presented and will be compared with assessment criteria.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Published 1882

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

1:10,560

The figure shows a 5x5 grid of cells. The columns are labeled A1 through A5 at the bottom, and the rows are labeled A6 through A20 on the left. Each cell contains a label: A1, A2, A3, A4, A5 in the first row; A16, A17, A18, A19, A20 in the second row; A11, A12, A13, A14, A15 in the third row; A6, A7, A8, A9, A10 in the fourth row; and A21, A22, A23, A24, A25 in the fifth row. Cell A13 is circled in purple. A green square highlights the 2x2 area containing cells A12, A13, A14, and A15. Dashed lines represent the grid boundaries.

Ordnance Survey Plan

Published 1973 - 1976

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Reading

Published 1990

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2018

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Supply of Unpublished Survey Information

Published 1973 - 1974

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Additional SIMs

Published 1977 - 1988

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan

Published 1980 - 1986

Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Appendix F

LEGISLATIVE AND PLANNING

FRAMEWORK

THE REGULATORY FRAMEWORK FOR OUR ASSESSMENT

Our assessment is made within the framework of the Contaminated Land Regime defined by Part 2A of the Environmental Protection Act and the Contaminated Land Statutory Guidance 2012. We have considered the contaminated land guidance documents issued by the Department for Environment, Food and Rural Affairs (DEFRA) including Model Procedures for the Management of Land Contamination (CLR11) (Environment Agency 2004a).

Our method is to create a clear conceptual model of the potential Pollutant Linkages present on site, consider the Sources (potential contaminants on site) which may cause harm, via Pathways, to Receptors such as human health (e.g. that of site users), the water environment (groundwater, surface water) and the built environment (buildings, services). Contaminated Land has a precise definition, and does not include all land which contains contaminants, but only land where there is a Pollutant Linkage causing (or giving rise to a significant risk of) a degree of harm.

Our approach to the assessment of risks to Human Health is consistent with that established in CLR11. This establishes a tiered approach including:

- Preliminary Risk Assessment (e.g. the establishment of potential pollutant linkages) – normally through desk based work;
- Generic Quantitative Risk Assessment (GQRA) (e.g. the comparison of contaminant concentrations against Soil Guideline Values (SGV) or other Generic Assessment Criteria (GAC)); and,
- Detailed Quantitative Risk Assessment (DQRA) (e.g. the comparison of contaminant concentrations against site specific assessment criteria).
