

NOTES:

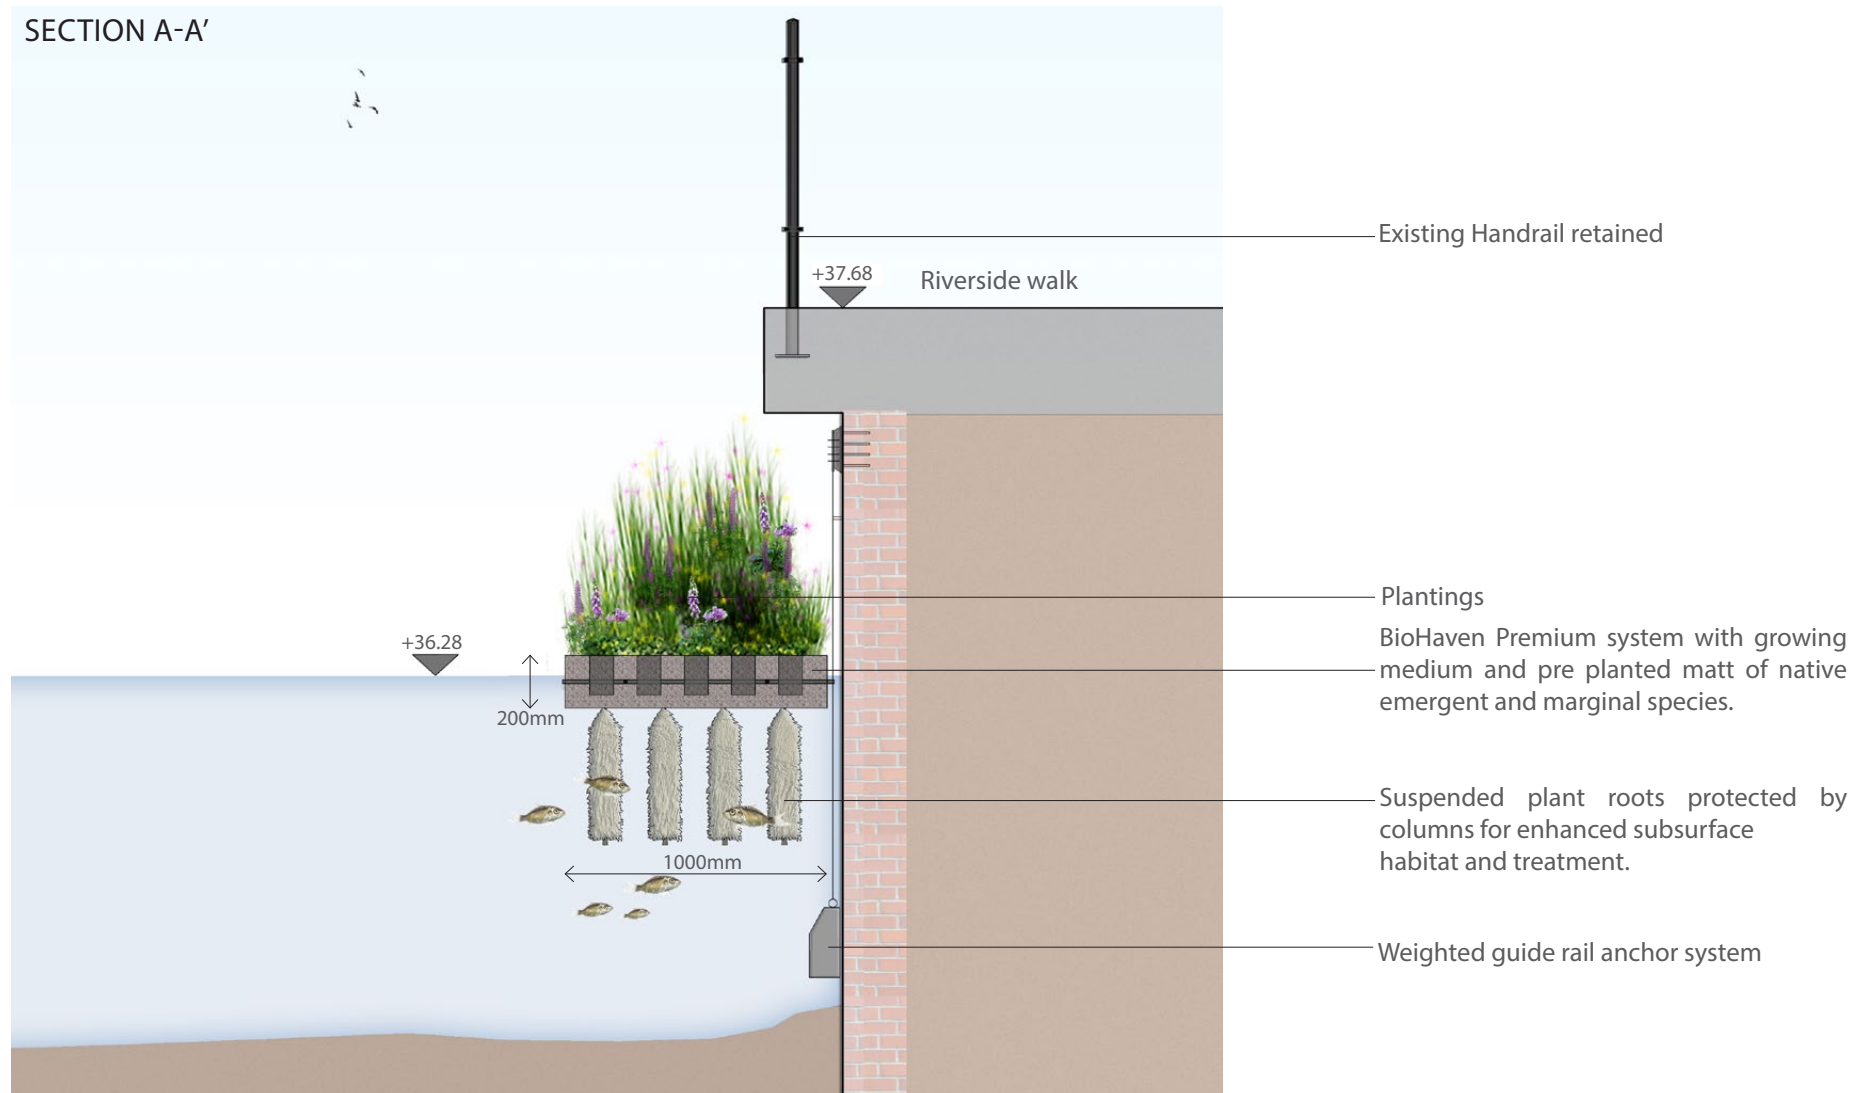

- ① Floating raft with native emergent and marginal plants. Fixed to wall cables, the raft can rise and fall with the water level. The raft in this location also helps deter boats from mooring against the railed off section of the riverside path.
- ② Lower river side path maintained with mooring posts added.
- ③ Existing willow tree (maintained as required) at waters edge and proposed planter at the riverside path level.
- ④ Chocolate Island.
- ⑤ Existing vegetation located in the river.

-----> Predicted flight path of bats along lines of waterside vegetation.
