

Works to Green Road Surgery for Parkside Family Practice.

Design and Access Statement

The brief included the following:

1. Additional consulting room.
2. Improved sanitary facilities.
3. Improved access provision.
4. Improved “presence”.

The entrance area has been reconfigured to provide improvements to points 2, 3 and 4.

As existing, the entrance is very understated and a visitor may find it difficult to locate. The proposals include a pitched roof with a glazed gable configuration together with a lobbied approach which provides a more easily identifiable entrance.

The physical access to the building will be improved by the large lobbied approach which gives access to the surgery and the toilets. The reception desk has good visual “control” over this area.

The materials will match the existing, where at all possible.
