

Condition 77 (Waste Management)

1. *Waste Management Strategy*

Motorline Reading Waste Management policy has recycling of materials as its primary focus. Cardboard and plastics form the bulk of waste generated by its retail dealership operations and an established Standard Operating Procedure is adopted to deal with Waste Management in the dealership.

Cardboard and plastics are recycled.

Provision is made for the collection and disposal of waste electrical products in accordance with WEEE regulations.

Motorline use Restore (paper confidential waste) and Biffa (dry waste and mixed recycling trade waste & general trade waste) waste disposal companies to recycle or properly dispose of waste materials.

2. *Waste Management Procedures*

The dealership will utilise two 1100 litre lidded waste bins located in the enclosed service yard to store waste pending collection.

Remaining waste arising in the dealership (excluding electrical products) is segregated at predetermined points within the dealership into three categories, batteries, plastic and general waste. Each waste product is collected in a separate receptacle, bagged and transferred to the lidded bins. A certified waste disposal company is contracted to dispose of the waste. The recycling/disposal strategy is determined by the certified waste disposal company.

The bins are collected on an agreed schedule by a national certified waste management company.

Dragging distance of waste outside of the unit will be confined to the service yard and will be a maximum of 25m from the rear service doors.

2. *WEEE Procedures*

We do not generate any customer waste for WEEE disposal. All business WEEE disposal are collected centrally and disposed from our Head Office using Euro Recycling.
