

A range of purpose manufactured rectangular attenuators to complement the Multibox fan range is available from Systemair, offering optimum acoustic performance. Attenuators with 600, 900 & 1200 acoustic splitters lengths are offered as standard.

Attenuators are constructed from quality assured materials to high "build-quality" standards. A perforated sheet steel fascia to the airway surfaces protects the scrim faced internal acoustic media.

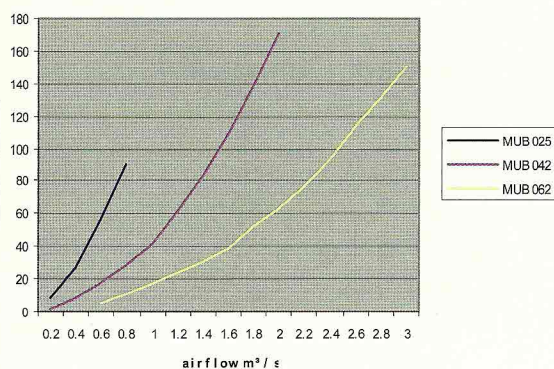

Acoustic splitters within the attenuators are manufactured with aerodynamically formed leading & trailing surfaces to minimise attenuator resistance to airflow.
