

Design and access statement - bookdrop - Battle Library and Caversham Library

The application is for the installatio of 1x external bookdrop to the front of Battle Library.

This bookdrop would be separate to the building

It would be made of metal and forms a box with an internal trolley to allow items to be returned when the library is closed.

A standard product measures h1460x w965 x d1194mm

A standard product loks like this <http://www.gresswell.co.uk/gaylordr-outdoor-book-return.html>

If there are particular restrictions on how the box would need to look I may not be able to accommodate as there are only a few models to choose from.

This would be mounted on the pavement and secured, close to the building and would be locked.
