

Environmental Impact Assessment for MLTC additional Floodlighting

We believe the environmental impact will be minimal.

Flood lighting has already been used for years on two courts and it is felt that the additional light on a additional one or two courts on occasions will not really have any noticeable further impact.

[MLTC employs a professional gardener who, once or twice a month (depending on time of year) visits to keep the club's small landscaped area tidy. But it should be noted that most of his time is spent strimming and cutting grass around the outside of the club fencing and when necessary trimming the shrubs and trees surrounding the courts.

This keeps the area adjacent to the club looking attractive and tidy and is funded by MLTC.]
