Layout

Hand car wash valeting service, consisting of four wash bays, four canopied drying/finishing bays and one bay for the cabin located adjacent to end of canopy/drying area. The layout will include for low level composite fencing finished in Anthracite Grey RAL 7016.

Drainage

The wet/wash area to be graded to allow run off to flow into a centralised silt trap. CPV drain and channel will connect to existing foul sewer, exact location of connection to be specified by survey specialists.

Surface Treatment

Wet area to be graded concrete. Dry area to be tarmac as existing.

Canopy

Cantilevered steel framed structure with tensile Polyester HT1100 DTex fabric cover with PVC coating and Biface finish in RAL 5017 (Traffic Blue). Canopy to be fixed to ground using reinforced concrete foundations sunk under ground level. Foundation depth subject to detailed design, locality and ground conditions, to be confirmed by structural engineer.

Cabin

Two roomed, Integra AV cabin with external decor in RAL 5017 (Traffic Blue) with windows and door.

Signage

To be located on 3no. cabin elevations including on 3no. fascia panels. Signage to also be placed (when necessary) on perimeter fence, max text height approx 326mm. Opening hours, Price List and Health & Safety posters to be displayed on perimeter fence as shown on elevations. Posters to be digitally printed onto composite panels and fixed onto fence posts.

Lighting and Power Supply

To be specified by consultants

Trade Effluent

All car wash chemicals used are manufactured by Nielsen and are biodegradable. Chemicals are diluted in a ration of up to 1:500 resulting in low chemical content in water run off. Main washing water is supplied from jet washers which deliver approximately 11 litres water per minute. Cars are washed for 3-4 minutes and therefore uses up to 44 litres of water per car.
Anticipated cars washed is 30 per day therefore the operation will use approximately 1320 litres water per day.
An average of 25 litres of water and diluted chemicals will fall to the floor where it will then drain into the silt trap and interceptor. Trade effluent will then travel to foul sewer through appropriate ACO drains and channels.
Effluent disposal will be supported by a corresponding Trade Effluent Licence.
