

Provision of boxes in accordance with ecologist's (EPR) recommendations. (Refer to Ecological Appraisal and Bat Survey Report, EPR, April 2015.)

10 x suitable bat boxes (such as Schwegler 1FF and 2F units)

BAT - Bat Box Location [BB]

(Recommendation provided by the Bat Conservation Trust)

Nest boxes are best put up during the autumn and should face between north and east, to avoid strong sunlight and the wettest winds. The boxes should tilt forward slightly so that any driving rain will hit the roof and bounce clear. Birds should have a clear flight path to the nest without any clutter directly in front of the entrance. Nest boxes are best put up during the autumn.

NB1 - 2 number - open-fronted boxes for robins and wrens low down, below 2m, and well hidden in vegetation.

NB2 - 4 number - standard nest box for tits and sparrows 2m to 4m up a tree.

Nest boxes to be attached either with a nylon bolt or with wire around the tree's trunk or branch, avoid nails which can harm trees. Use a piece of hose or section of car tyre around the wire to prevent damage to the tree.

(Recommendations provided by the RSPB)
