PLANNING CONDITION INFORMATION

WORTON GRANGE READING – PLANNING PERMISSION DATED 14TH APRIL 2017 REF 151944

Condition 77 (Waste Management)

1. Waste Management Strategy

Toys R Us Waste Management policy has recycling of materials as its primary focus.

Cardboard and plastics form the bulk of waste generated by its retail store operations and an established Standard Operating Procedure is adopted to deal with Waste Management in stores.

Cardboard and plastics are recycled.

Provision is made for the collection and disposal of waste electrical products in accordance with WEEE regulations.

Toys R Us use national, GreenZone approved waste disposal companies to recycle or properly dispose of waste materials.

2. Waste Management Procedures

All cardboard waste arising in the stores is collected and baled using an onsite cardboard baling machine provided as part of the standard store equipment.

The cardboard bales are returned to Toys R Us distribution centre in Coventry on delivery trucks servicing the stores with stock and stored on site.

A certified recycling company is contracted to collect all waste cardboard bales from our distribution centre for recycling.

The store will utilise two 1100 litre lidded waste bins located in the enclosed service yard to store waste pending collection.

Remaining waste arising in stores (excluding electrical products) is segregated at predetermined points within the store into three categories, batteries, plastic and general waste. Each waste product is collected in a separate receptacle, bagged and transferred to the lidded bins. A certified waste disposal company is contracted to dispose of the waste. The recycling/disposal strategy is determined by the certified waste disposal company.

The bins are collected on an agreed schedule by a national certified waste management company.

Dragging distance of waste outside of the unit will be confined to the service yard and will be a maximum of 25m from the rear service doors.

3. WEEE Procedures

Toys R Us are a subscribed member of Valpak (membership Ref RM06386). Valpak manage all of the Toys R Us WEEE obligations. Collection bins are provided within the store for use by customers and the store to place waste batteries in. These are then collected at periods arranged locally for disposal.

Any electrical goods that are returned by customers are transported to the central distribution centre for storage and collection by Valpak.
