St Edward Homes

Dear Shaun,

**Re: Reading Green Park Village: Phase 6**

During 2015 as part of site wide archaeological mitigation works at Green Park Village Reading, Oxford Archaeology excavated six of trenches within the Phase 6 area. The trenches within the Phase 6 area (numbers 84, 85, 86, 87, 88 and 89) were excavated under an addendum to an approved Written Scheme of Investigation (OA 2015), and measured a total of 263.5 linear metres. The trenches were targeted on the footprints of buildings proposed under planning ref: 07/01275/OUT, and revealed up to 1.5m depth of modern made ground which contained fragments of brick and pieces of wire of recent origin, overlying natural geology. No features or deposits of archaeological origin were noted. The results of the archaeological mitigation work for Phase 6 was included in the planning report *Reading Green Park Village. Archaeological Mitigation Report V. 1* (OA 2016).

Yours sincerely

Gerry Thacker  
Project Manager
