

BIRD BOX LOCATIONS AS AGREED WITH ORACLE CENTRE MANAGEMENT AS PART OF BIO-DIVERSITY MEASURES

BIRD BOXES

Swift Boxes

Number	Type
4no.	Schwegler standard No.17 (single compartment)
4no.	Triple Swift Box No 17A (three compartment) nest boxes.

Location/Installation Guidelines:

At least 6-7m off the ground on building faces preferably on a north facing aspect (otherwise the inside of the box gets too hot in the sun for rearing young). Where possible, boxes should be sited under eaves or overhanging roofs. Swifts approach their nest boxes by swooping into the front opening from underneath, so the airspace in front and beneath the nest boxes needs to be clear.

Supplier information: www.nhbs.com, www.wildcareshop.com, or similar approved.

House Sparrow Terraces

Number	Type
4no.	Schwegler 1SP sparrow terrace

Location/Installation Guidelines:

House sparrows are communal nesters, so preferabl,e to locate multiple terraces in the same place, then the chances of use increases. They need to be at least 2m off the ground (and in locations where they will not be tampered with by the general public).

Supplier information: www.nhbs.com, www.wildcareshop.com, or similar approved.
