

Site: 64 Lowfield Road Caversham Park Village RG4 6PB

Overview: Recent branch failure from Oak following recent heat and high summer winds. The tree is an existing historic pollard, whilst this history of works has led to weak branch attachment points and given the trees current tpo status and age class it is unlikely that consent for pollarding would be given.

Specification:

Provide qualified arboricultural team to carry out all round reduction by up to 2m to reduce likelihood of further failure.
