1.0 Introduction

- 1.1 This Transport Statement has been prepared on behalf of Mazars to accompany a planning application for a temporary change of use from B1 use to D1 use for The Christ Embassy Church. The site previously had a temporary consent for the same change of use for a three year period which expired on the 2nd August 2013 (Planning Application 10/00985/FUL)
- 1.2 The site is located at Unit 5 Weighbridge Row, which is a private cul-de-sac within the Cardiff Road Industrial area, Reading. Weighbridge Row provides access to 6 business units. Cardiff Road runs west to east from Richfield Avenue with the majority of the road passing through the Industrial Area, however towards its eastern end it is within a residential area with high levels of on street parking. To prevent vehicles from the Industrial Area passing through the residential streets the road is closed to all motor vehicles by a row of bollards 50 metres to the east of the junction of Cardiff Road with Weighbridge Row. At the point of closure however pedestrian and cycle access is maintained.
- 1.3 Weighbridge Row is located within 1 kilometre of Reading Railway Station and just over 600 metres from bus stops on Caversham Road, which are served by several services. Car parks at Rivermead Leisure Centre and the town centre are also within close proximity of the site to supplement the provision of on-site car parking.
- 1.4 The Christ Embassy Church which has 2 main services a week held on a Wednesday evening between 7pm and 9pm and on a Sunday morning between 10am and 12.30pm, with a service having an average congregation of 130 people. Smaller prayer meetings occur on a Friday and minor activities occur at other times of the week preparing for the main services.
- 1.5 This report has been prepared in accordance with current best practice guidance and demonstrates that:
 - ▶ The proposals accord with national and local policies relevant to transport;
 - ▶ The site is accessible by public transport, walking and cycling;
 - ▶ Suitable and appropriate access to the site can be achieved from Cardiff Road;
 - ▶ The level of parking provision proposed complies with the requirements of Reading Borough Councils Supplementary Planning Document "Revised Parking Standards and Design"; and,
 - ▶ The levels of traffic associated with the proposals will be negligible.
- 1.6 Following this introduction the Transport Statement is split into 6 sections as follows:
 - ▶ Section 2 outlines the transport planning policies that are considered to be pertinent to this application;
 - ▶ Section 3 reviews the accessibility of the site by all modes of transport;
 - ▶ Section 4 reviews the proposed parking demand;
 - ▶ Section 5 reviews the trip generation associated with the proposals; and,
 - ▶ Section 6 summarises and concludes this report.

2.0 Policy

National Planning Policy Framework

- 2.1 The National Planning Policy Framework (NPPF) was published in March 2012, and replaces the previous national planning policies that were set out in the various Planning Policy Guidance Notes / Statements. With regard to transport, the NPPF replaces policy contained within PPG13 (Transport).
- 2.2 The NPPF sets out a presumption in favour of sustainable development that recognises the importance of transport policies in facilitating sustainable development, and that planning decisions should have regard to local circumstances. In this regard, paragraph 29 of the NPPF states that:
- "The transport system needs to be balanced in favour of sustainable transport modes, giving people a real choice about how they travel. However, the Government recognises that different policies and measures will be required in different communities and opportunities to maximise sustainable transport solutions will vary from urban to rural areas."*
- 2.3 Moreover, paragraph 30 states that:
- "... local planning authorities should therefore support a pattern of development which, where reasonable to do so, facilitates the use of sustainable modes of transport."*
- 2.4 Furthermore, when considering development proposals paragraph 32 of the NPPF states that:
- "All developments that generate significant amounts of movements, as determined by local criteria, should be supported by a Transport Statement or Transport Assessment. Planning policies and decisions should consider whether:*
- ▶ *The opportunities for sustainable transport modes have been taken up depending on the nature and location of the site, to reduce the need for major transport infrastructure;*
 - ▶ *Safe and suitable access to the site can be achieved for all people; and,*
 - ▶ *Improvements can be undertaken within the transport network that cost effectively limit the impacts of the development."*
- 2.5 Paragraph 32 also states that:
- "Development should only be prevented or refused on transport grounds where the residual cumulative impacts of development are severe."*
- 2.6 With regards parking Paragraph 39 , states that:
- "If setting local parking standards for residential and non-residential development, local planning authorities should take into account:*
- ▶ *The accessibility of the development*
 - ▶ *The type, mix and use of development*
 - ▶ *The availability of and opportunities for public transport*
 - ▶ *Local car ownership levels; and*
 - ▶ *An overall need to reduce the use of high-emission vehicles*

Planning Practice Guidance

- 2.7 The Planning Practice Guidance is the Department for Communities and Local Governments (DCLG) web based planning resource which was launched on the 6th March 2014 and replaces the previous planning circulars and directions which have been cancelled. The web based guidance brings together the planning practice guidance for England in a single location and is an indication of the Secretary of States views on how the policies within the NPPF should be implemented. With regards parking provision, paragraph 008 states

"local authorities should seek to ensure parking provision is appropriate to the needs of the development"

Reading Borough Council Local Development Framework

- 2.8 Planning applications within Reading Borough are assessed against the planning policies contained within the Core Strategy adopted in January 2008 and The Sites and Detailed Policies Document adopted in October 2012.
- 2.9 A summary of the policies which are relevant to the proposals are as follows:
- ▶ *Core Strategy Policy CS22 - Transport Assessments:* Developments should ensure an adequate level of accessibility.
 - ▶ *Core Strategy Policy CS24 - Car/Cycle Parking:* Car parking standards and cycle parking requirements will be applied in relation to the accessibility of locations to sustainable transport facilities.
 - ▶ *Sites and Detailed Policies Document Policy DM12:* Access and servicing arrangements to developments should be safe and comply with the Highway Authorities standards.
- 2.10 Having regard to core strategy policy CS24 it should be noted that the adopted parking standards are set out in the Reading Borough Council Supplementary Planning Document entitled "*Revised Parking Standards and Design*" adopted October 2011. The guidance operates on a zonal system depending on the proximity of sites to local centres and public transport provision. Places of worship/offices located within zone 2 should provide the following amount of parking:

Land Use	Parking Standard Zone 2
D1 Place of Worship	1 space per 10 fixed seats and/or 1 per 20 square metres Open Hall
B1 Office	1 space per 100 square metres

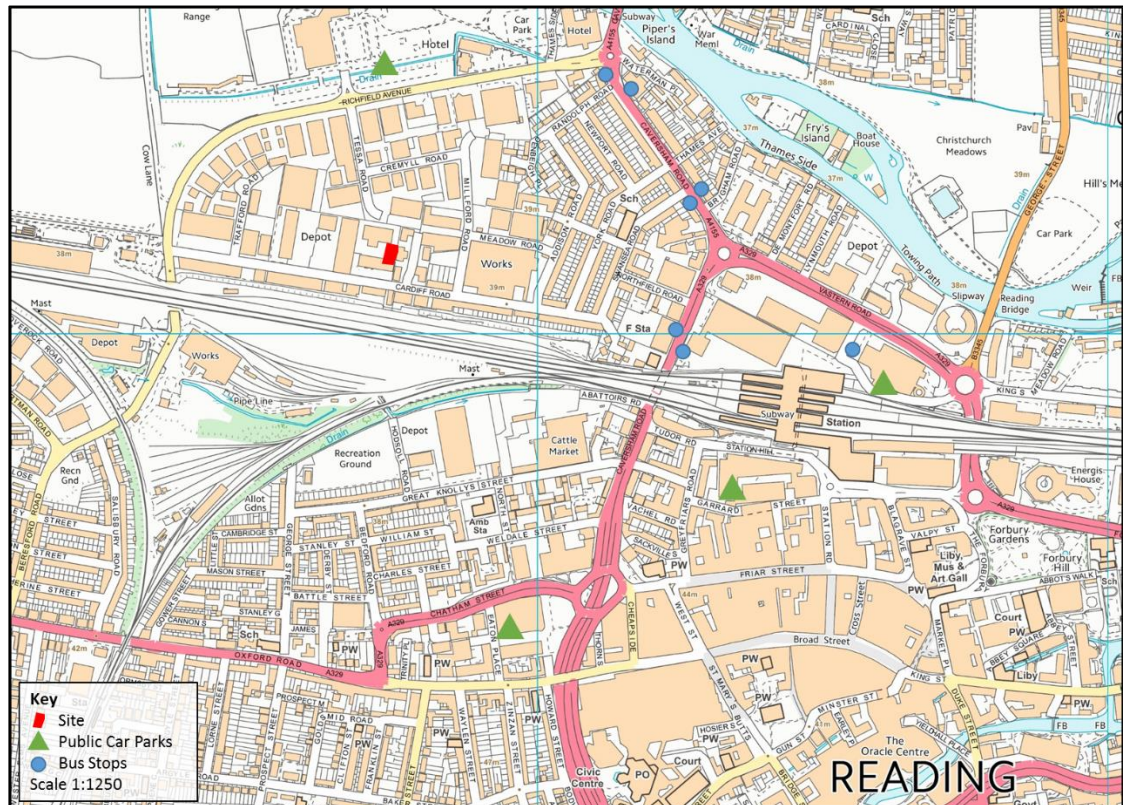

Table 2.1 – Reading Borough Council Parking Standards

Summary

- 2.11 On the basis of the above review it is evident that the location of the site in relation to sustainable modes of transport is taken in to account when assessing the acceptability of a proposed development. Furthermore, developers are required to provide parking at levels that will encourage users to travel by modes other than the private car whilst accommodating the anticipated parking demands.
- 2.12 The following sections of this report therefore review the accessibility of the site and evaluate the parking provision and demand for the church.

3.0 Baseline Conditions

- 3.1 The site is located on Weighbridge Row within the Cardiff Road Industrial Area. To the north lies Richfield Avenue and the Rivermead leisure complex and car park, which is a short 5 to 10 minute walk from the site via Tessa Road, Cremyll Road and Millford Road. To the east is Victorian terraced housing which leads to Caversham Road and onto Reading Station and bus interchange. The town centre is located 1.5 kilometres to the south east of the site. The location of the site is shown below.

Site Location

- 3.2 The site currently accommodates a single modern light industrial unit within a development of 6 similar units along Weighbridge Row and is provided with 8 parking spaces. Weighbridge Row is a shared surfaced road with a width of 5.5 metres. Cardiff Road is 7.3 metres wide with 1.8 metre wide footways and is accessed directly from Richfield Road at a simple "T" junction. Richfield Road is accessible from either the A4155 Caversham Road or from the A329 Oxford Road via Portman Road. Both these classified roads bring access to the wider highway network including the Inner Distribution Road and further destinations such as Wokingham, Henley, Woodcote, and Pangbourne.

Sustainable Transport Accessibility

- 3.3 It is generally accepted that walking and cycling provide important alternatives to the private car, and should also be encouraged to form part of longer journeys via public transport. Indeed, it is noteworthy that the Institute of Highways and Transportation (IHT) has prepared several guidance documents that provide advice with respect to the provision of sustainable travel in conjunction with new developments. Within these documents it is suggested that:
- ▶ Most people will walk to a destination that is less than one mile (Planning for Walking, 2015);
 - ▶ The bicycle is a potential mode of transport for all journeys under five miles (Planning for Cycling, 2015); and,
 - ▶ Walking distances to bus stops should not exceed 400 metres, whilst people are prepared to walk twice as far to rail stations (Planning for Walking, 2015).

- 3.4 It should be noted that the Highways Officers provided comments regarding sustainability within the temporary planning consent in 2011, which stated “*The application site is situated midway along Cardiff Road, which is outside of the town centre area (as defined within the Borough Plan) but still within walking distance of the rail and bus interchange in the town centre so is therefore accessible to good public transport links.*” Since these comments were made the new northern interchange and entrance to Reading Station has opened reducing the distance from the station entrance to the site.

Accessibility by Cycling

- 3.5 Reading has an extensive network of cycle routes and these are shown within **Appendix A**. Cardiff Road is a designated quiet cycle route linking the station and town centre with Reading cycle routes R5 and R40 which provide safe routes for cyclists to the west and north Reading. From the station there are several designated cycle routes which provide access to south and east Reading.

Accessibility by Bus

- 3.6 The nearest bus stops are on Caversham Road approximately 400 metres from the site by foot. These Bus stops provide access to routes 22, 24, operated by Reading Buses, routes X40 and X39 operated by Thames Travel and route 800, operated by Arriva. The timetables for these services are included as **Appendix B**. The table below summarises the bus services and destinations available from these bus stops.

Service Number and Route		Approximate Frequency	
		Monday - Saturdays	Sundays
22	Reading – Station North – Caversham Heights	Every 30 minutes	Hourly
24	Emmer Green - Reading	Every 20 minutes	Every 30 minutes
X39/40	Oxford – Wallingford - Reading	Every 30 minutes	Hourly
800	High Wycombe – Marlow – Henley - Reading	Every 30 minutes	

Table 3.1 – Bus Services

- 3.7 The bus interchange at Reading Station is within 1 kilometre of the site and provides access to a large range of services covering the entire Greater Reading area as well as outlying settlements. A copy of the is included in **Appendix C**.

Accessibility by Rail

Reading Rail station is located approximately 1 kilometre to the south-east of the site and is easily accessible by foot. Reading Rail station is the second busiest interchange station in England after Birmingham New Street and is located at the cross point of the main western main line and north south cross country lines. Destinations including Newbury, Bournemouth, Manchester Piccadilly, London Paddington, Oxford, Penzance, London Waterloo, Cardiff Central, Newcastle, Bristol Temple Meads and Gatwick Airport can be accessed from Reading station.

Summary of Baseline Conditions

- 3.8 The above review demonstrates the site is readily accessible by a variety of modes of transport that will offer visitors to the church a real choice in how they travel. It is therefore considered that the location of the site accords with the guiding principles of the National Planning Policy Framework and the adopted policies of Reading Borough Councils Local Development Framework.

4.0 Parking Demand

4.1 Weighbridge Row is a private road and each unit along the road has a provision of allocated parking either in front or to the side of the unit. The provision per units is as follows;

- ▶ Unit 1 – 4 spaces
- ▶ Unit 2 – 4 spaces
- ▶ Unit 3 – 8 spaces
- ▶ Unit 4 – 4 spaces
- ▶ Unit 5 (Application site) – 8 spaces
- ▶ Unit 6 – 4 spaces

4.2 In addition to these spaces there are 22 unallocated spaces for all the units along the eastern side of Weighbridge Row, as shown in the image below.

Parking along Weighbridge Row

- 4.3 Within the Industrial Estate, unrestricted parking is permitted along the majority of the roads. Along Cardiff Road, Tessa Road, Cremyll Road and Millford Road some day time limited weighting restrictions, Monday to Saturday 8am to 6pm, are in place to prevent indiscriminate parking obstructing the roads for deliveries. No parking at any time restrictions are in place at junctions within the estate in the interests of safety. The residential area at the east end of Cardiff Road is a controlled parking zone solely for permit holders and no public parking is available.
- 4.4 The church services are within an open planned 121 square metre hall with no fixed seats. In accordance with Reading Borough Councils Revised Parking Standards and Design Supplementary Planning Document, parking for a site within zone 2 should be provided with 1 space per 20 square metres of hall area, which equates to 6 spaces.
- 4.5 In additional to the hall there are office areas which total 100 square meters and in accordance with the parking standards the office requires 1 car parking space per 100 square metre for a zone 2 site, which equates to 1 space.

- 4.6 Whilst there is a cafeteria within the building this is ancillary to the church use and is not open to the public, therefore no additional parking provision is necessary for this use. The parking provision available on site is 8 spaces which is in excess of the 7 spaces required in accordance with the Council's standards.
- 4.7 It is accepted however that during a Sunday Service the congregation can be up to 130 attendees and even though the site is in an accessible location and has a parking provision in accordance with the council's standards, parking demand may be greater than the parking provision.
- 4.8 However the site is within an industrial area where during weekday evenings and weekends (the main operating times of the church) there is spare capacity on the neighbouring road network to accommodate any additional vehicle parking. Parking demand surveys were carried out on Wednesday 11th November and Sunday 15th November to determine the available on street parking capacity and the full surveys are provided within **Appendix D**.
- 4.9 The parking demand surveys were undertaken before, during and after the services held on a Wednesday and Sunday and the results are detailed in Tables 4.1, 4.2, 4.3 and 4.4.

Table 4.4 – Continued On Street Parking Space Demand Wednesday 11th November

- 4.10 The surveys have shown that during peak times at the Church, any on street parking which may occur is not detrimental to the on street parking provision on the neighbouring highway network. On a Sunday there are 289 on street parking spaces available and at 9:30, 30 minutes before the service at the Church commences, there are 209 free on street parking spaces (72% of available spaces), while during the service at 11:00 there are 173 free on street parking spaces (60% of available spaces). At 13:00, 30 minutes after the service has finished there are 164 free on street parking spaces (57% of available spaces).
- 4.11 During a weekday evening there are 292 available parking spaces available at 18:30 but this reduces to 284 available parking spaces after 20:00. The difference in the on street parking provision for a weekday evening compared to a weekend is a result of the varying times the various traffic regulation orders covering parking permits and limited waiting parking restrictions are in force on the local network. However on a Wednesday evening at 18:30, 30 minutes before the service begins there are 189 free on street parking spaces (65% of available spaces), while during the service at 20:00 there are 187 free on street parking spaces (64% of available spaces). At 22:00, 1 hour after the service has finished there are 192 free on street parking spaces (67% of available spaces).
- 4.12 These results clearly show that even at peak times the traffic generation associated with the church does not result in the on street parking provision on the neighbouring highway network being significantly reduced and the implications of any additional parking is minimal and non-material.

5.0 Trip Generation

- 5.1 While the church has had a temporary consent to operate from the premises, prior to this the unit was used as a B1 office. Therefore the potential weekly trip generation implications from the church on the highway network have been assessed against this previous use.
- 5.2 As such, the TRICS database (version 7.2.3) has been interrogated in order to quantify the levels of traffic flows that are likely to be associated with the proposed development. The trip rates that have been extracted from the database are based on the following search parameters:
- ▶ Land Use – B1 Office, Place of Worship
 - ▶ Regions – England & Wales (excluding Greater London)
 - ▶ Size – B1 Office (Under 999 sqm), Place of Worship (under 1200 sqm)
 - ▶ Date Range – 2001 onwards
 - ▶ Selected days – Weekdays and weekends; and;
 - ▶ Selected Locations – Edge of Town / Suburban
- 5.3 Weekly trip generations have been used as the hours of operation between a business and a place of worship are considerably different. Copies of the TRICS output reports are provided at **Appendix E**, while a summary of the weekly trips are provided in Table 5.1.

Site Use	Weekly number of Trips
B1 Office (340 sqm) , operational Monday to Friday	171 vehicle trips
Church with ancillary offices and services Wednesday evening and Sunday morning.	94 vehicle trips

Table 5.1 – Predicted Weekly number of Trips

- 5.4 The assessment of the church's weekly trips within Table 5.1 is robust. TRICS does not contain details of weekday evening services within the Places of Worship land category. Therefore the Sunday trip rate has been used for the Wednesday service even though the weekday evening congregation is smaller than the congregation for a Sunday service.
- 5.5 The analysis shows that the proposed permanent change of use from a B1 office to a church will have a reduction in the level of vehicle trips on the neighbouring highway network. To this end, it is concluded that the proposals would not result in a material impact from a highway and transportation perspective, let alone the severe impact that is referred to within the National Planning Policy Framework. As such the proposals should not be resisted on the basis that they will be detrimental to the free flow of traffic on the local highway network.

6.0 Summary and Conclusions

- 6.1 This Transport Statement has been prepared on behalf of Mazars LLP to accompany a planning application for the temporary change of use from B1 Offices to a D1 Place of Worship at unit 5, Weighbridge Row, Reading.
- 6.2 This Transport Statement demonstrates that the site benefits from access to a good network of pedestrian links, which connect the site to the public transport network that serves the local area. On that basis, it is considered that the site is located to provide a real choice of travel modes to and from the site.
- 6.3 The parking provision on-site conforms with the requirements of Reading Borough Councils Supplementary Planning Document "Revised Parking Standards and Design" and the parking surveys have shown there is sufficient capacity on street for any over flow parking.
- 6.4 It has been shown that the proposals are unlikely to have a material impact upon the local highway network. Indeed, the vehicle trip weekly generations indicates that the church will generate less trips than that by a B1 office use.
- 6.5 In summary, the report demonstrates the following:
- ▶ The location of the site accords with the relevant national and local transport planning policies;
 - ▶ The site benefits from access to a sustainable transport network that provides alternatives to the private car;
 - ▶ The parking provision accords with adopted standards
 - ▶ The anticipated level of traffic associated with the development will not lead to any demonstrable harm upon the operation of the local highway network.
- 6.6 On the basis of the above, it is concluded that the proposals accord with national and local transport related policies and as such, there appear no reasons why the proposals should be resisted on traffic and transportation grounds.

Appendix E

TRICS Data

Calculation Reference: AUDIT-734001-151103-1137

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 07 - LEISURE
Category : T - PLACE OF WORSHIP
VEHICLES

Selected regions and areas:

05	EAST MIDLANDS	
	LN LINCOLNSHIRE	1 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	NE NORTH EAST LINCOLNSHIRE	1 days
10	WALES	
	MM MONMOUTHSHIRE	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Filtering Stage 2 selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 300 to 1200 (units: sqm)
Range Selected by User: 300 to 1200 (units: sqm)

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/07 to 11/05/14

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Sunday 3 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count 3 days
Directional ATC Count 0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Edge of Town Centre 2
Suburban Area (PPS6 Out of Centre) 1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone 1
No Sub Category 2

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Filtering Stage 3 selection:

Use Class:

C3	1 days
D1	2 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	1 days
15,001 to 20,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	1 days
50,001 to 75,000	1 days
100,001 to 125,000	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

1.1 to 1.5	3 days
------------	--------

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	3 days
----	--------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

LIST OF SITES relevant to selection parameters

The 'browse and select' feature in TRICS was used to choose the sites to be included in this selected set. The TRICS user browsed the full list of sites for this land use category and selected directly from this list.

20:00 - 21:00									
21:00 - 22:00									
22:00 - 23:00									
23:00 - 24:00									
Total Rates:		7.996			7.873			15.869	

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected: 300 - 1200 (units: sqm)
 Survey date range: 01/01/07 - 11/05/14
 Number of weekdays (Monday-Friday): 0
 Number of Saturdays: 0
 Number of Sundays: 3
 Surveys manually removed from selection: 0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Calculation Reference: AUDIT-734001-151103-1104

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT
Category : A - OFFICE

VEHICLES

Selected regions and areas:

02	SOUTH EAST	
	ES EAST SUSSEX	1 days
	HF HERTFORDSHIRE	1 days
09	NORTH	
	CB CUMBRIA	1 days
	TW TYNE & WEAR	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Filtering Stage 2 selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 186 to 999 (units: sqm)
Range Selected by User: 186 to 999 (units: sqm)

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/01 to 16/10/13

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	1 days
Wednesday	3 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	4 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Edge of Town Centre	2
Suburban Area (PPS6 Out of Centre)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	1
Built-Up Zone	3

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Filtering Stage 3 selection:

Use Class:

B1 4 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

20,001 to 25,000 3 days
25,001 to 50,000 1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

75,001 to 100,000 2 days
125,001 to 250,000 1 days
500,001 or More 1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0 4 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Not Known 1 days
No 3 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

LIST OF SITES relevant to selection parameters

The 'browse and select' feature in TRICS was used to choose the sites to be included in this selected set. The TRICS user browsed the full list of sites for this land use category and selected directly from this list.

Total Rates:			5.673			5.613			11.286

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected:	186 - 999 (units: sqm)
Survey date date range:	01/01/01 - 16/10/13
Number of weekdays (Monday-Friday):	4
Number of Saturdays:	0
Number of Sundays:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.
