

DESIGN AND ACCESS STATEMENT REQUIREMENT

RE: The installation of a combined public payphone & ATM cash machine kiosk.

AT: O/S Railway Station (New Entrance) Station Hill Reading , Reading RG1 1LX

USE

Installation of a combined public payphone and ATM cash machine. The site has been identified within an area which has a high demand for ATM facilities.

AMOUNT

The combined payphone and ATM kiosk measures 0.9m x 0.9m .

LAYOUT

The site selected for this application has had the following considerations taking into account:

- To ensure clear pavement access for people using either the payphone or ATM and at the same time allowing people to pass by without obstruction
- That people with vehicles using the facilities can park without causing an obstruction on the highway and affect the free flow of traffic and pedestrian safety.
- The ATM is placed, within reason, away from direct sunlight to reduce glare on the screen
- Community safety – each site is checked and approval sought with the local Police Crime Prevention Officer before submission in order to highlight any potential issues surrounding crime and safety.
- The introduction of an ATM machine will help to encourage people to withdraw cash to use within the surrounding area thereby supporting local businesses

SCALE

The housing fits well into the existing street scene and is compatible with existing buildings and structures. (Please see accompanying drawings relating to this).

LANDSCAPING

No landscaping treatments are relevant to the proposal. On completion of works all paving materials will be made good.

APPEARANCE

Our expertise in producing robust products to cope with extremities of weather and usage enables us to guarantee the product will still look good for many years to come.

ACCESS

By placing the payphone and ATM on the outside of the unit at a height that is part M or BS8300 compliant ensures free and easy access for all users .
