

But don't worry: our tools can help you comply with Biodiversity Net Gain

We've found evidence of Priority Habitat within 500m of your site. We'll include the relevant information about this in your BGP. You can still use our tool to calculate your BNG and produce the documents you need.

The orange boundary in the above map shows the area around your site which comes under the LPA zone of influence. However, the purple shapes display the designated and priority habitat sites around your site.

Habitat Name	Natural England Unique Id	On Site?
Priority Habitat Inventory - Coastal and Floodplain Grazing Marsh (England)	557d3574-9191-43bb-8212-68f17ff09962	Within 500m
Priority Habitat Inventory - Deciduous Woodland (England)	716c95e1-6442-432f-b177-6dbb6369762d	Within 500m
Priority Habitat Inventory - Deciduous Woodland (England)	7f372146-d078-48cd-8a0d-85e353ceca93	Within 500m
Priority Habitat Inventory - Deciduous Woodland (England)	8e58ea9d-8757-4b4e-a64e-36637f61667d	Within 500m

Habitat Name	Natural England Unique Id	On Site?
Priority Habitat Inventory - Deciduous Woodland (England)	68188dc9-bb80-4f54-95fb-78cb0dbe3005	Within 500m

Be on the lookout for these habitats when surveying on your site, in case they have since expanded onto your site area. And don't worry: if you are later told you cannot use the Small Site Metric because of this, we will refund you in full.

Good News, you can use the Biodiversity Net Gain Tool

Simplify your path to BNG compliance with our easy-to-use tool

Good news! Your site qualifies as a 'small site,' making you eligible to use our tool to complete your biodiversity metric. There's no need for an ecologist or ecological consultant; you simply need to ensure that the person gathering information on your site's habitats has relevant experience (such as previous work in landscaping, architecture, or development involving green spaces) or possesses appropriate training or qualifications. Individuals with such credentials are typically considered “competent” for the small site metric.

We particularly encourage you to assign team members with the most relevant experience, training, or qualifications to lead the site survey.

Our BNG Tool is designed not just to ensure your compliance with biodiversity requirements but also to streamline and support your efforts. It provides essential resources and guidance, helping you to accurately identify the habitats on your site and to understand the requirements for their creation or enhancement. With our tool, you can confidently manage and complete the necessary assessments with precision.
