Proposed Tree Species

- | | |
|---|--------------------------|
| 1 | Carpinus betulus 'Lucas' |
| 2 | Malus trilobata |
| 3 | Amelanchier lamarckii |
| 4 | Magnolia leonard messel |
| 5 | Malus hupehensis |
| 6 | Prunus cerasifera |

Large focal feature Ornamental apple tree provides a key statement to the rear garden. This provides blossom, berries for wildlife and great autumn colour. The focal tree is surrounded by a sinuous footpath leading to Livery Close. A sculptural timber bench encourages residents to rest within the garden, framed by ornamental shrub and tree planting.

Private patio terraces are located on the 3rd floor which provide seating opportunities framed with contemporary planters filled with a mix of shrub and herbaceous planting.

Roof terrace is located on the 3rd floor which provides seating opportunities framed with contemporary planters filled with a mix of shrub and herbaceous planting.

A variety of fastigate trees are to be located along the road corridor to create canopy cover along the road and soften the building. These trees will assist in providing dappled shade and species selected to reflect the locality.

Defensible ornamental shrub planting is located around the rear of Units 4 and 5 from other occupiers using the communal outdoor space

A mix of flowering and scented climbers are proposed along the existing northern boundary wall to help screen the wall and create an attractive vegetated outlook for the occupiers of unit 1. This green wall also creates further habitat opportunities for birds to nest in once established.

Proposed rain garden approx 250mm depth consisting of a mix of decorative pebbles and gravel interspersed with planting is to be incorporated within the open space proposals to create attractive SuDS features along with opportunities for further rain water harvesting opportunities with the inclusion of water butts.

South Street and Sidmouth Street frontage is to provide a formal evergreen Osmanthus hedge which will provide flower, scent and a strong structural edge. As the ground slopes gently down towards the building, ornamental planting is proposed at the top of the bank to provide an attractive view for the residents and provides a greater visual separation from the road corridor.
