Executive Summary

Context

This report has been prepared within the context of the development proposed at the site as granted by the Planning Inspectorate under appeal reference APP/E0345/W/22/3313424. Specifically, this report seeks to discharge Condition 4 of the consent, which refers to an investigation of potential contamination prior to the commencement of development.

Risk Summary

The overall land contamination risk estimation in the context of development is Low. The likelihood of the site reaching the statutory tests for designation as “Contaminated Land”, under Part 2A of the Environmental Protection Act 1990, is considered to be Very Low.

Land Condition Key Findings

Current Operations: Based upon the site being an undeveloped parcel of land, there is a very low potential for contaminative activities and no obvious sources of contamination were observed. Surrounding land use to the north and east comprises commercial usage with only a limited (low) potential for associated sources of contamination. **Historical Uses:** The site is considered to have a low contamination source potential on account of its status as an undeveloped parcel of land.

- This assessment has identified a low potential for soil and groundwater contamination beneath the site and within the surrounding area that could affect the proposed development.
- With regard to groundwater resources, the site is not within a drinking water Source Protection Zone and no potable groundwater abstractions have been identified within the vicinity of the site. Furthermore, based upon the low potential for significant sources of groundwater contamination on the site, the risk to groundwater resources is considered to be low.
- Based upon a review of environmental records, no permitted or licenced activities with the potential to adversely impact the environmental condition of the site have been identified.
- No pollution incidents have been identified on or within the immediate vicinity of the site with the potential to impact the environmental quality of the site.
- No ground gas-generating sources of significance have been identified beneath or in proximity of the site.

Ground Stability

The BGS natural subsidence hazard data indicates that the property is in an area of Very Low susceptibility to shrink-swell subsidence. The highest hazard rating for all other natural subsidence hazards within the vicinity of the site is Moderate.

Recommendations

This assessment has not identified any plausible pollutant linkages specifically requiring further investigation or assessment to facilitate the proposed development. Notwithstanding this, it is proposed that as part of an intended geotechnical investigation to determine the engineering properties of shallow ground, shallow soil samples are obtained and subjected to chemical analysis for the purposes of materials and waste classification. A discovery strategy shall also be adopted during earthworks to inspect the ground for unexpected contamination and ensure an appropriate course of action is taken through agreement with the LPA.

This Executive Summary forms part of our full report and should not be used as a standalone document.

1 Introduction

1.1 Authorisation

Ashfield Solutions Limited ("Ashfield") was commissioned by Weybourne Limited ("Weybourne" or "the client") to undertake a Phase 1 Environmental Site Assessment, in relation to the development proposed at Scours Lane, Tilehurst, Reading, RG30 6AX (the "site"). The location and boundary of the site is shown in Drawing 01.

This report has been prepared in accordance with e-mail correspondence from the client dated 01/08/2024.

1.2 Objective and Context

This report has been prepared within the context of the development proposed at the site as granted by the Planning Inspectorate under appeal reference APP/E0345/W/22/3313424. Specifically, this report seeks to discharge Condition 4 of the consent, which refers to an investigation of potential contamination prior to the commencement of development:

"4) No development shall take place until an assessment of the risks posed by any contamination has been submitted to and approved in writing by the local planning authority. This assessment must be undertaken by a suitably qualified contaminated land practitioner, in accordance with British Standard BS 10175: Investigation of potentially contaminated sites - Code of Practice and the Environment Agency's Model Procedures for the Management of Land Contamination (CLR 11) (or equivalent British Standard and Model Procedures if replaced), and shall assess any contamination on the site, whether or not it originates on the site.

The assessment shall include:

- a) a survey of the extent, scale and nature of contamination;*
- b) an assessment of the potential risks to:*
 - human health,*
 - property (existing or proposed) including buildings, pets and service lines and pipes,*
 - adjoining land,*
 - groundwaters and surface waters,*
 - ecological systems,*
 - archaeological sites and ancient monuments*

The development shall be implemented in full in accordance with the approved details."

The overarching aim of this assessment is to identify any environmental issues at the site, including the potential or actual presence of contamination, and determine the corresponding implications in terms of the development proposed, along with recommendations on how those liabilities can be managed.

In the context outlined above, the objectives of this report, are to:

- Provide an outline conceptual site model and Preliminary Risk Assessment (PRA), consistent with the overarching industry guidance laid out in the Environment Agency's Land Contamination Risk Management (LCRM) framework.

- Provide an indication as to whether the site, or any part thereof, is likely to be classified as Contaminated Land under Part IIA of the Environmental Protection Act 1990 (i.e. whether a statutory land contamination risk is likely to exist which might lead to regulatory enforcement).
- Provide recommendations as to whether further site investigations and risk assessments would be beneficial in relation to understanding land contamination risks.

1.3 Information Sources

This report has been prepared using the following information sources:

- Environmental data searches (referred to hereafter as “the Environmental Data Searches”:
 - Landmark Envirocheck® Site Sensitivity report (Nov-2023)
 - Landmark Envirocheck® Historic Map report (Nov-2023)
 - Landmark Envirocheck® Geology report (Nov-2023)
- British Geological Survey Onshore GeoIndex Service (accessed Nov-2023)
- Coal Authority Interactive Map (accessed Nov-2023)
- Zetica UXO online UXB Risk Map¹ (accessed Nov-2023)

A site inspection was conducted by Ashfield (of external areas only) on 11 December 2023.

1.4 Report Limitations

This report has been prepared with due care and diligence in accordance with industry good practice and guidance. The conclusions presented in this report represent Ashfield's professional judgement based upon the information available to us and the conditions existing as of the date of this report (as indicated in Section 1.3). Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ashfield was accurate and complete at time of receipt; and to the extent that site access was available to us.

This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility environmental compliance. Ashfield makes no representations or warranties, expressed or implied, about the conditions of the site. If additional information or data becomes available, which may affect the opinions expressed in this report, Ashfield reserves the right to review such information and, if warranted, to modify the opinions accordingly. This report has a limited lifespan and may need updating to reflect continually evolving environmental legislation or changes to site activities.

Attention is drawn to the following specific limitations:

- **Asbestos** – this report does not constitute an Asbestos Management Survey, Building Survey or Refurbishment Survey; and should not be relied upon in any such capacity. However, where we believe asbestos to be present during a site inspection; or where it has been recorded in any supporting information, we have provided informative references herein.
- **Non-native invasive species (e.g. Japanese Knotweed)** – unless otherwise stated this report does not constitute a formal survey for invasive non-native species. However, where identified we have provided informative references and recommendations herein. The lack of any observed invasive species should not

¹ <https://zeticauxo.com/downloads-and-resources/risk-maps/>

be interpreted as positive confirmation that invasive species are completely absent from the site; seasonality can affect the extent to which positive identification of non-native invasive species can be identified.

- **Storage Tank Integrity** – this report does not constitute any formal inspection of oil or fuel storage tanks and associated infrastructure in relation to the Control of Pollution (Oil Storage) Regulations, 2001. However, where identified we have included basic observations in relation to the condition of tanks, bunds, pipes and associated infrastructure, as well as any evidence of leaks and spills.
- **Ecology** – this report does not constitute a formal survey of ecological potential or existing habitats. Ecological surveys may be required to evaluate ecological potential and development constraints; such surveys usual need to be undertaken at specific times of the year.
- **Building Structural Integrity/Ground Stability** – this report does not constitute a full appraisal of the structural integrity of the site, built environment and natural geotechnical bearing properties of the soils underlying the site.
- **Environmental Permits** – records of compliance with environmental permits are not available as part of standard environmental data searches. Unless explicitly stated otherwise this report excludes any formal assessment of compliance with environmental permits and does not include any follow-up consultation with the regulatory authorities in relation to the operator's compliance with any environmental permits.
- **Flood Risk** – this assessment does not include consideration of flood risk at the site.

2 Site Environment

2.1 Site Setting

The application site ("the site") is an approximately 0.23 ha parcel of undeveloped land located within the southwestern corner of Stadium Way Industrial Estate and to the northeast of the junction between Scours Lane and Oxford Road. The wider area is generally described by employment uses to the north-west, north and east and semi-detached and terraced housing to the west, southwest, and southeast. To the south of Norcot Roundabout, and along Oxford Road heading eastward, there is a range of various commercial and retail uses, including Reading Retail Park, 145 m to the south of the site.

A summary of the physical site characteristics is present in Table 1. Surrounding land uses are summarised in Table 2.

Table 1 - Site Physical Characteristics

Terrain & Topography	The topography slopes generally to the north away from Oxford Road
Ground Cover	Ground cover is 100% permeable and comprising grass cover with a few trees.

Table 2 - Surrounding Land Uses

North	Units 4 Stadium Way comprising a vehicle servicing garage and associated carparking.
East	Unit 8a Stadium Way occupied by a Screwfix commercial outlet and associated carparking.
South	Railings and Oxford Road beyond.
West	Railings and Scours Lane beyond.

2.2 Current Site Operations

At the time of writing, the status of the site is an undeveloped grassed area of land.

2.3 Current Site Condition

Ashfield conducted a site inspection on 11 December 2023. Table 3 provides a summary of the current site condition and any environmental hazards associated with current activities.

Table 3 - Environmental Liabilities: Contemporary Site Activities and Condition

Land Contamination Hazards	
Above-ground tanks (ASTs) ²	None identified during site inspection.
Below-ground tanks (USTs)	None identified during site inspection.
Evidence of oil/chemical spills/leaks	None identified at time of inspection.
Substations	None identified.

² Addressing the storage of oils and chemicals, posing a high source potential for Land Contamination hazards. ASTs with very low to negligible land contamination source potential, such as water tanks and containing solid matter (such as grain silos), are specifically outlined in 'Additional Site Observations'.

Waste Liabilities	
Waste Management Practices	None identified at time of inspection.
Fly Tipping	None identified at time of inspection.
Other Waste Observations	None identified at time of inspection.
Other Environmental Liabilities & Observations	
Asbestos	None Identified
Site Operations	None identified at time of inspection.
Invasive Non-Native Species	None identified during site inspection; however, note that no formal survey of non-native invasive species has been undertaken as part of this commission.
EMF	None identified at time of inspection.
Ecology & Habitats	None identified at time of inspection.
Additional Site Observations	None identified at time of inspection.

*This includes small containers, drums and intermediate bulk containers (IBCs).

Key Points

Based on the evidence available to us at the time of our site inspection we consider the potential for land contamination hazards associated with current site uses to be very low. Section 4 provides further evaluation of the risks associated with any material hazards identified in the above table taking into consideration the sensitivity of the surrounding environment and land uses.

2.4 Historical Land Use

Historical maps and images (where available) have been reviewed to identify and draw attention to any potentially contaminative industrial practices or land uses that may have compromised the site's environmental quality in the past. A summary of the key findings of our independent historical map review is presented in Table 4.

Table 4 - Historical Land Use

Map or Image Date		Description of Site
●	1878-1881	On-site: The land is largely undeveloped. 'Scours Lane' enters the site from the western boundary.
		Off-site: Great Western railway runs east-west, with 'Scourslane Junction' 129m north of the site boundary. Beyond that the land is largely undeveloped. The River Thames' runs northeast to southwest approximately 295m northwest of the site boundary. The surrounding areas to the east, south and west largely comprise undeveloped fields, with occasional 'Cottages' and farms. An 'Old Gravel Pit' is located approximately 400m southwest.
●	1882	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.
●	1898-1900	On-site: There are no significant changes in use.
		Off-site: A burial ground is located 195m south of the site. Approximately 300m southeast of the site has undergone residential development with terraced housing located around a 'Barracks'.
●	1901	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.

●	1911-1913	On-site: There are no significant changes in use.
		Off-site: The land to the southwest has continued to develop and expand, predominantly residential terrace housing in use, the closest property is circa 40m southwest.
●	1913-1914	On-site: There are no significant changes in use.
		Off-site: 'Nine Elms Iron Works' is detailed 100m south of the site.
●	1931-1936	On-site: There are no significant changes in use.
		Off-site: a 'Greyhound Stadium' is located directly to the northeast of the site boundary. The land south of the site from approximately 10m south is predominantly residential housing. The iron works is now detailed as a 'Pulsometer Works'.
●	1938	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.
●	1947-1949 (aerial image)	On-site: The aerial imagery indicates that there are no significant changes in use.
		Off-site: The aerial imagery indicates that there are no significant changes in use.
●	1959-1961	On-site: There are no significant changes in use.
		Off-site: A 'Sports Ground' is now detailed north of the railway line (Circa 257m north of the site). A 'Depot' has been constructed 100m west. The land south remains predominantly residential with occasional 'Works'.
●	1961-1969	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.
●	1969-1971	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.
●	1970-1976	On-site: There are no significant changes in use.
		Off-site: A 'Works' and depot located 343m east of the site boundary.
●	1983-1984	On-site: There are no significant changes in use.
		Off-site: The 'Greyhound Stadium' is no longer present. Five large industrial units have been constructed on the site of the former stadium, with the easternmost unit detailed as a 'Works'. Wigmore Lane runs across the southern boundary. Stadium Way road constructed 112m north of the site, in front of the rail line.
●	1990-1992	On-site: There are no significant changes in use.
		Off-site: There is a slight change in configuration for the units north/northeast from site, with 7 units in the contemporary configuration. The easternmost unit is now separate from the works.
●	1999	On-site: There are no significant changes in use.
		Off-site: The works to the south are no longer present and have been replaced by a retail park comprising superstores.
●	2003	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.
●	2006	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.
●	2009	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.

●	2013	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.
●	2016	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.
●	2023	On-site: There are no significant changes in use.
		Off-site: There are no significant changes in use.

Notes: ● denotes full map coverage; ◐ denotes partial map coverage.

Key Findings

The historical maps indicate that the site has remained undeveloped land to the immediate southwest of Stadium Way Industrial Estate which was developed Ca.1983, thus indicating a very low on-site contamination source potential. There is a limited (low risk) from potential off-site sources associated with the industrial estate.

2.5 Landfilling Activities

Table 5 provides a summary of available records of landfilling at the site based on Environment Agency public records and the Environmental Data Searches. This includes registered landfills, as well as historical records of informal land filling activities, which may affect the site.

Table 5 - Landfilling Activities

Activity	Records within 250m of the site
Historic Landfill Sites (all available records)	0
Other Potentially Infilled Land (e.g. infilled ponds, streams, embankments)	0
Operational/Permitted Landfills	0

Key Points

The environmental data searches provide no details of landfilling activities within the vicinity of the site.

2.6 Regulatory Permits & Licences

Details of permitted or licensed activities, either on or within the vicinity of the site, can indicate whether there are environmental risks posed to the property, or whether previous licenced activities may have resulted in environmental impact at the site. Details of permits and licenses have been obtained from the Environmental Data Searches, as well as on-line Environment Agency public records. A summary is presented in Table 6.

Table 6 - Licenses and Permits

Activity	On-site	Entry within 250m of the site
Industrial sites holding licenses or authorisations*	0	3 ^[1]
Sites with dangerous or hazardous substances**	0	0
Discharge consents	0	0

Sites determined as Contaminated Land under Part 2A of the Environmental Protection Act 1990	0	0
Petrol and fuel sites	0	1 ^[2]
Gas pipelines	0	0
Groundwater/surface water/potable water abstraction licenses	0	0
Private Water Supply abstractions (unlicensed)***	0	0
Other waste sites such as treatment, transfer or disposal (non-landfill)	0	1 ^[3]

. *Including Environmental Permits, and Local Authority Pollution Prevention & Controls.

**Including Control of Major Hazard (COMAH); Historic records under the now revoked Notification of Installations Handling Hazardous Substances (NIHHS) Regulations, 1982 (and amendments); Explosives Sites; Planning Hazardous Substance Consents & Enforcements and registered radioactive substances.

***No additional information available.

Industrial Sites Holding Licenses or Authorisations

- i. Local Authority Pollution Prevention and Controls: There are three authorised/permited permits. The closest entry is 37m southwest of the site at 'Shell Norcot' (Petrol filling station), 'Wigmore Autos' (Respraying of Road Vehicles) is located 79m east and 'Autotech Reading Ltd' (Respraying of Road Vehicles) is detailed 177m southwest.

Petrol and Fuel Sites

- ii. Fuel Station Entries: 'Shell Norcot' is situated 37m southwest of the site and is 'Open'.

Other Waste Sites

- iii. Waste Transfer Sites: 'Dana Ltd' holds a licence 212m southwest of the site, dated 1 st January 1992. The status is detailed as 'exempt from licence'.

No regulatory permits or licences have been identified for the site. Based upon the review of environmental records, there are no permitted or licensed activities within the vicinity of the site with the potential to adversely impact the environmental condition of the site.

2.7 Pollution Incidents

There are twenty-two recorded pollution incidents to controlled waters within a radius of 250m of the site. The majority of these incidents are recorded as 'Category 3 – Minor Incidents'. The closest of which is located 38m southwest of the site. The following two incidents are of higher significance:

- Category 2 Significant Incidents - dated 27th February 1996 and 10th January 1993, located 182m northwest of the site. No further information is available regarding the receiving water or the cause of the incident.

Key Points

There have been no reported pollution incidents on-site. The majority of the off-site pollution incidents are recorded as 'Category 3 - Minor Incidents'. While there are 2 No. 'significant incidents' within the vicinity of the site, based upon the distance from the site and time elapsed since the events, the potential for significant impacts to the site's environmental condition is considered to be low.

2.8 Designated Protected Sites

Sensitive land uses include areas designated by the Environment Agency as Sites of Special Scientific Interest ("SSSI"), Local Nature Reserves, RAMSAR sites and Special Areas of Conservation ("SAC") etc. There are three of these features recorded within a radius of 1km of the site.

There are three Local Nature Reserves detailed within 1km of the site, these are:

- Mcllory Park 524m west
- Round Copse 675m west
- Lousehill Copse 805m southwest

Key Points

There are no designated Protected Sites within the vicinity of the property which are likely to be impacted by current or future site activities.

2.9 Hydrology & Site Drainage

The River Thames is located 295m north/northwest of the site. In the absence of any third-party drainage surveys, it is not possible to comment on the connectivity of the site's drainage systems with off-site drainage infrastructure and/or surface waters.

3 Subsurface Site Environment

3.1 Geology

An overview of the site geology has been inferred from British Geological Survey (“BGS”) 1:50,000-scale mapping for artificial, superficial and bedrock deposits. Where available and relevant we have also included additional information from BGS archive borehole records and the findings of third-party reports.

	BGS Description	Additional Information
Artificial Deposits	The BGS mapping does now show artificial deposits beneath the site.	No relevant additional information available.
Superficial	The site is underlain by the Taplow Gravel Member comprising deposits of Sand and Gravel.	No relevant additional information available.
Bedrock	The bedrock beneath the site is mapped as Seaford Chalk Formation and Newhaven Chalk Formation – Chalk	No relevant additional information available.

3.2 Groundwater Resources & Hydrogeology

The presence and status of any known groundwater bodies beneath or within proximity to the site, are presented below.

Superficial Geology	These deposits are classified as a Secondary (A) Aquifer - these aquifers are capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers.
Bedrock Geology	These deposits are classified as a Principal Aquifer, meaning the aquifer may support water supply and/or river base flow on a strategic scale.

The intrinsic groundwater vulnerability beneath the site is classified by the EA as Medium-High - this means groundwater is regarded as a high priority resource with limited natural protection.³ This risk category takes into consideration the likelihood of a pollutant reaching the groundwater, the type of aquifers present (e.g. superficial or bedrock) and the sensitivity of those aquifers. The classification is precautionary and provides the most vulnerable class from either the superficial or bedrock aquifer within a 1km² area.

The site is not located within a groundwater Source Protection Zone (SPZ).

³ Based on the *simplified* groundwater vulnerability mapping. Note that the maps provide intrinsic vulnerability and therefore the vulnerability classification does not take into account any site-specific information such as current or intended activities or the specific characteristics of pollutants which may be present. The vulnerability assessment is based on how pollutants released **at the soil surface** by an activity are transported down to the water table taking into account protective layers and properties; the assessments do not consider the release or existing presence of pollutants beneath the soil surface.

Key Points

The bedrock beneath the site is underlain by a Principal Aquifer meaning that it is capable of supporting water supply and/or river base flow. Whilst the site is not situated within a SPZ, nearby groundwater abstractions for leisure and domestic supplies have been identified. However, the site is considered to have a low contamination source potential overall and given the historical and contemporary industrial usage of the surrounding area, local water quality is likely to have been compromised. Overall, the site is considered to be located within a moderately sensitive setting with respect to groundwater resources.

3.3 Ground Stability Hazards

Important Note: The following information does not constitute a full appraisal of the geotechnical bearing properties of the soils underlying the site. In the event of any future development taking place on the site the developer would be responsible for undertaking the necessary investigation so satisfy themselves and the regulatory authorities that the ground conditions and foundation solutions being proposed are fit for purpose.

3.3.1 Natural Subsidence Susceptibility

Natural subsidence hazards reported within the Environmental Data Searches are summarised in Table 7.

Table 7 - Natural Subsidence Hazards

Subsidence Mechanism	Hazard Potential
Collapsible deposits	Very Low
Compressible soils	Moderate
Dissolution	Low
Slope instability	Very Low
Sand wash-out	Low
Shrink-swell clays	Very Low
All other mechanisms	Moderate

Key Points

The main cause of subsidence in the UK is the shrinkage in dry weather of clay soils which expand and contract with changes in their moisture content. The BGS natural subsidence hazard data indicates that the property is in an area of Very Low susceptibility to shrink-swell subsidence.

The highest hazard rating for all other natural subsidence hazards within the vicinity of the site is Moderate.

3.3.2 Mining Related Subsidence

Coal Mining

Reference to the Coal Authority Interactive Map View indicates that the site is not within a coal mining reported area.

Other Mining and Quarrying

There are no non-mining or quarrying risks identified within the vicinity of the site.

Key Points

The site is not located within a coal mining reported area, no non-mining or quarrying risks identified within the vicinity of the site.

3.4 Ground Gas

Common sources of hazardous ground gases include:⁴

- Made ground
- Infilled ponds
- Underlying natural strata (e.g. alluvial peat, chalk, worked coal measures)
- Off-site landfills

There is evidence of typical ground-gas generating sources beneath the site. Whilst Chalk and other natural geological strata can lead to elevated concentrations of bulk gases, they are regarded as low risk sources that cannot generate gas at a significant rate.⁴

Based upon the available information the ground gas generation potential on the site is estimated to be Very Low.⁵

Key Points

Considering the available information, the potential for ground gas generation on-site is estimated to be Very Low.

3.5 Radon Potential

The potential for Radon hazard at the property has been assessed using the Definitive Radon Potential Map for Great Britain and Northern Ireland, created jointly by Public Health England (PHE) and the BGS. The map uses long-term radon measurements made in over 479,000 homes across Great Britain and 23,000 homes across Northern Ireland, combined with geological map data. Although the radon data used in production of the indicative atlas comes from measurements in homes, the maps indicate the likely extent of the local radon hazard in all buildings. The information in this atlas is therefore relevant to ongoing commercial property uses.

The site is within a Radon Affected Area and is at medium risk from Radon gas with 1-3% of properties above the Action Level. However, no radon protection measures are required for Building Regulations compliance (England & Wales).

Because the site is in a Radon Affected Area, tenants/employers are required to undertake a workplace risk assessment for radon in accordance with the Management of Health and Safety at Work Regulations 1999. Radon levels can vary greatly in larger buildings and individual risk depends on the radon level in different areas where staff spend most of their time. Simple radon test kits can be obtained for the measurement of radon in workplaces from ukradon.org.

⁴ Wilson, et al. 2007. Assessing Risks Posed by Hazardous Ground Gases to Buildings. CIRIA C665.

⁵ BS8576:2013 Figure 6 – Decision Matrix for Initial Monitoring.

3.6 Unexploded Ordnance

Ashfield has consulted the online ZeticaUXO Unexploded Bomb (UXB) risk maps. The maps provide a high-level indication of the potential for UXB to be present as a result of World War Two (WWII) bombing and is intended to help inform whether further, more detailed research, by a UXO specialist is required. The database used for the mapping includes records from the central government (National Archives), local authority archives, the Ministry of Defence, and the German Luftwaffe.

The site is situated within a low-risk region (bombing density <10 per 1,000 acres). In general, should the site be redeveloped, further action is not necessary.

4 Preliminary Risk Assessment

4.1 Introduction

This section provides a preliminary risk assessment for potential land contamination present at the site. The assessment of risk from land contamination in the United Kingdom is based around the development of a Conceptual Site Model (CSM). Where no ground investigation information is available for a site, the CSM is usually limited to basic desk-based information. The aim of the initial, or outline, CSM is to support the identification of plausible relationships between potential contaminants at a site, pathways by which those contaminants may migrate, and receptors which may be impacted by contaminants (such as people or sensitive groundwater). All three components must be present for there to be a viable contaminated land risk: a Contaminant, a Pathway and a receptor.

- Contaminant – Contamination that has the potential to impact human health and/or the environment;
- Pathway – The route by which the contaminant may come into contact with human health or the environment; and
- Receptor – Receptors are typically humans or the environment (e.g. water resources) that could be affected by the contamination.

If a plausible CPR linkage is present, then the degree of risk is assessed using a tiered risk-based approach. A Preliminary Risk Assessment (PRA) defines whether there are plausible pollutant (CPR) linkages present; and uses a qualitative approach to evaluate whether there is a potential risk which may require further investigation or mitigation. At the PRA stage, subjective terms (e.g. low to high) are used to describe the estimation of risk.

Note: There is no statutory definition of what constitutes, for example, a low or high risk – these are subjective terms and different stakeholders may have different perceptions of risk.

Where a PRA has determined that further works are required, this normally comprises one or more phases of intrusive site investigation followed by additional tiers of generic- and detailed-quantitative risk assessment.

It is important to note that the overall risk assessment process is often an iterative one – more detailed assessment may raise issues that require earlier tiers to be revisited. The process within each tier may also be iterative, especially when information is evaluated, and gaps are identified in the knowledge needed to make a particular decision. In this case, approaches taken earlier within the tier may need to be reappraised.

In this assessment a PRA has been undertaken using qualitative approaches to establish the overall risk posed by the site in the context of a proposed commercial/industrial end-use.

4.2 Pollutant Linkage Assessment

The context of our assessment is that the site is to continue being used in its current form. In our pollutant linkage assessment, we have considered specific areas of the site where contamination may be present as well as more 'general' conditions, typical of brownfield or industrial sites.

Potential Contamination Sources	
On-site	CONTEMPORARY: The site comprises an undeveloped parcel of land, no current sources of contamination have been identified. HISTORICAL: No historical sources of contamination have been identified (the historical map information indicates that the site is undeveloped and as shown in present day mapping).
Off-site	CONTEMPORARY: Immediately off site are industrial units that form Stadium Trade and Business Park, based upon the profile of current site tenants there is a low potential for contaminative activities. HISTORICAL: The surrounding area remained largely undeveloped prior to the construction of depots and works to the east and west Ca.1980s with some (albeit low) potential for associated sources of contamination. The greyhound stadium Ca.1931-1983 has a low contamination source potential.

Potential Receptors	
Human Health	Site Occupiers – proposed drive-through restaurant including enhanced landscaping. Third Parties (i.e. neighbours). Maintenance and construction workers.
Controlled Waters	Groundwater Resources - Underlying Secondary (A) Superficial Aquifer and Principal Bedrock Aquifer. The site does not fall within a groundwater Source Protection Zone (SPZ). However, there are recorded licensed water abstractions within the vicinity of the site. Surface Water – River Thames located 295m north/northeast of the site, based upon the distance and topography from the site, this is considered to be of low sensitivity.
Built Environment	Buildings and buried services.
Ecological Systems	None identified.

Potential Pathways & Pathway Viability	
Human Health	Low potential for ingestion, inhalation and/or dermal contact from contaminated soil and dust. Negligible potential for ingestion of vegetables and soils attached to home grown produce. Low potential for permeation of potable water supplies. Low potential for inhalation of vapours from contaminated soils or groundwater.
Controlled Waters	Groundwater as receptor – Low potential for leaching from contaminated soils and migration to underlying groundwater; migration to wider aquifer and to abstractions where present. Surface Waters & Dependant Ecosystems – Low potential for migration of groundwater contamination to identified surface waters including prior leaching from contaminated soils.
Built Environment	Low potential for preferential pathways along existing or abandoned services, drains, conduits, boreholes, etc. Low potential for damage via contact with building materials.

4.3 Preliminary Risk Classification

The overall land contamination risk estimation in the context of the proposed redevelopment of the site is *Low*.

The likelihood of the site reaching the statutory tests for designation as “Contaminated Land”, under Part 2A of the Environmental Protection Act 1990, is considered to be *Very Low*.

This overall classification is based upon the following key factors:

- There is considered to be a low potential for significant sources of contamination associated with the contemporary and historical use of the site as undeveloped greenfield land.
- Based upon surrounding land use both historical and contemporary, there is some potential for contaminative activities to adversely impact the environmental condition of the site, however this is considered to be low.
- The site is underlain by a Principal Aquifer. The site is not within an SPZ, and no groundwater abstractions have been identified within the vicinity of the site. Based upon the low potential for significant source of groundwater contamination and likelihood of poor local groundwater quality on account of surrounding industrial historical/contemporary land usage risk to groundwater abstractions is considered to be low.
- Based upon the review of environmental records, no permitted or licenced activities with the potential to adversely impact the environmental condition of the site have been identified.
- No pollution incidents have been identified on or within the immediate vicinity of the site with the potential to impact the environmental quality of the site.
- No ground gas-generating sources of significance have been identified beneath or in proximity of the site.

4.4 Recommendations

This assessment has not identified any plausible pollutant linkages specifically requiring further investigation or assessment to facilitate the proposed development. Notwithstanding this, it is proposed that as part of an intended geotechnical investigation to determine the engineering properties of shallow ground, shallow soil samples are obtained and subjected to chemical analysis for the purposes of materials and waste classification. A discovery strategy shall also be adopted during earthworks to inspect the ground for unexpected contamination and ensure an appropriate course of action is taken through agreement with the LPA.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Berkshire

Published 1878 - 1881

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
