CONTAMINATED LAND - PHASE 1 DESK STUDY

LUSTRE CONSULTING

Phase 1 Desk Study

Greyfriars Road - Reading

LUSTRE
CONSULTING

Non-Technical Summary

What is Proposed?	It is understood that proposals involve the demolition of the existing building and the erection of a part-7, part-13 storey building comprising 266 co-living units (Sui Generis) and associated communal amenity facilities, refuse storage, cycle parking and plant equipment.
What is the Problem?	The following potential sources of contamination have been identified: ▶ Onsite – Historical site use as residential dwellings and as an office building. ▶ Offsite – several minor potentially contaminative land uses
What is the Result?	The risks attributable to viable pollutant linkages were considered to be low and very low given the nature of potential contamination sources and the proposed development.
What are the Next Steps?	This report should be submitted to the local planning authority. No further works or mitigation measures are considered necessary to ensure the proposed development is suitable for use from a land quality perspective.

APPENDIX B:	Historical Maps

1.0 Introduction

- 1.1 This report presents the findings of a Phase 1 Desk Study - a land contamination assessment that has been prepared in line with best practice guidance and planning policy.

What is a Phase 1 Desk Study?

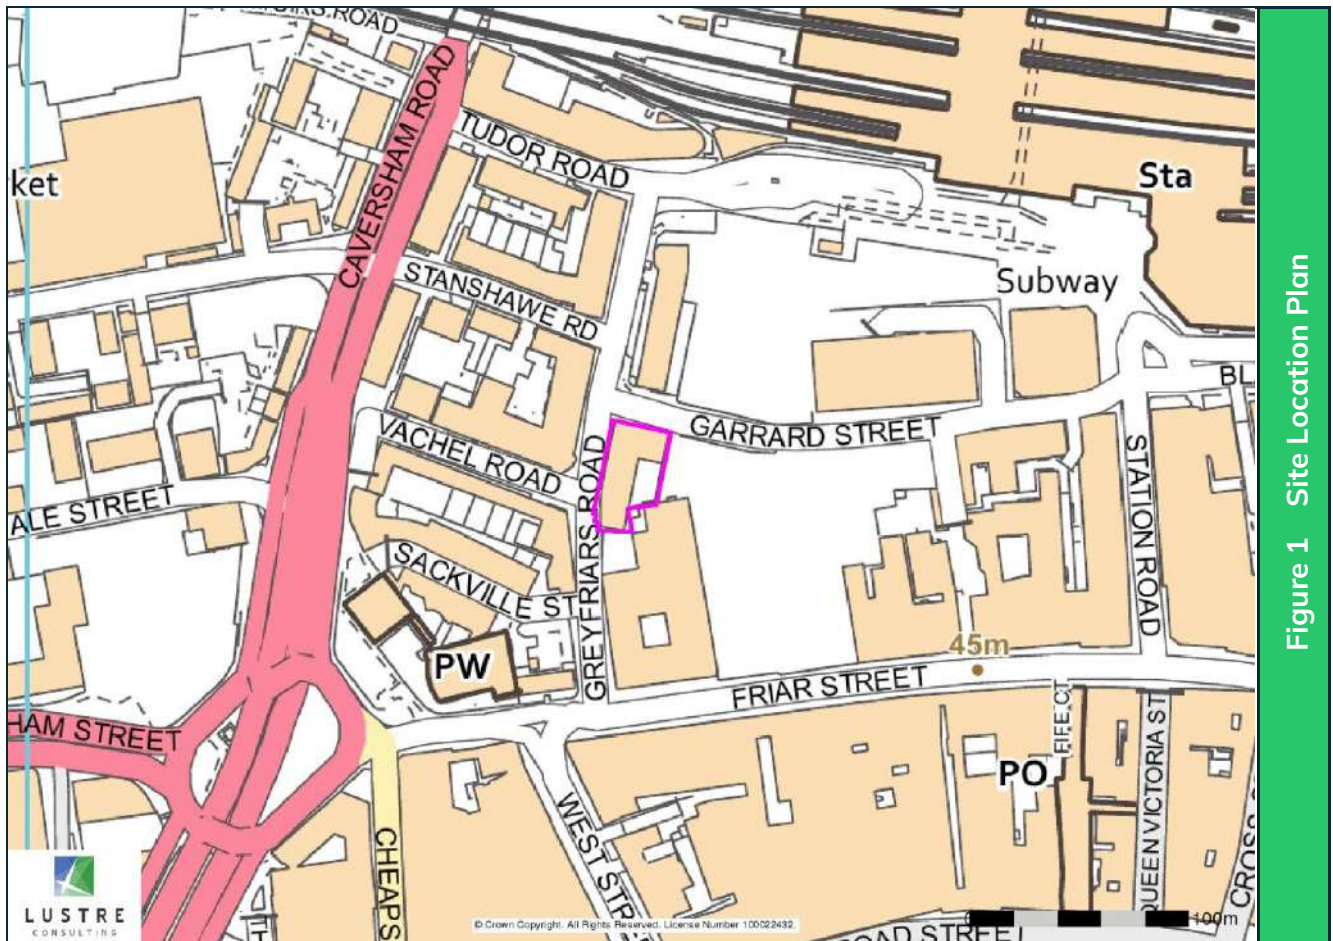

- 1.2 A Phase 1 Desk Study will determine if potential contamination is present at a site, and importantly, if that contamination poses a risk to future site users or the environment. If the Desk Study finds that the level of risk is unacceptable, you may need to further investigate with a Phase 2 Site Investigation and possibly undertake remediation.
- 1.3 The Phase 1 assessment will consider the historical and current uses of a site and understand it's environmental sensitivity, within a conceptual site model (CSM). The report will provide risk ratings assigned to different components of the CSM and give actionable recommendations. Recommendations may include further investigation of any issues or ways to reduce the risk. If no unacceptable risks are identified, then typically no further environmental assessment is required. Find out more about Phase 1 Desk Studies [here](#).
- 1.4 Understanding and reducing the risks ensures that you have a safe and compliant site. When dealing with planning, the National Planning Policy Framework (NPPF) and associated policies require an appropriate land contamination risk assessment at the initial planning stage, whilst the Land Contamination Risk Management guidance (LCRM) requires a phased, risk-based approach when dealing with land affected by contamination in the UK. A Phase 1 Desk Study is the first part of that iterative investigation process.

The Subject Site

Table 1 Site Details

Address	20 – 30 Greyfriars Road, Reading, RG1 1NL
Eastings, Northings	471270, 173670
Area	0.12ha

- 1.5 The site, roughly rectangular in plan, currently comprises one office building with a combination of undercroft and basement carparking. The site is located within a commercial urban area. The site area is shown in Figure 1.

The Proposed Development

- 1.6 It is understood that the site is proposed to be redeveloped to provide a co-living scheme, as illustrated in Figure 2.
- 1.7 The proposed development comprises the demolition of the existing building and the erection of a part-7, part-13 storey building comprising 266 co-living units (Sui Generis) and associated communal amenity facilities, refuse storage, cycle parking and plant equipment.
- 1.8 Externally, a small courtyard is proposed within the northeast section of the site. It is anticipated to be laid to hardstanding with a strip of soft landscaped planting to the north and eastern perimeter.

Figure 2 Proposed Development Plan – Ground Floor (Top), 1st Floor (Bottom)

The Stakes & Objectives

1.9 The scope of works adopted in this Desk Study will address the following potential issues:

- ▶ Potential for contamination from historical site uses and nearby land uses through a review of available historical Ordnance Survey maps (dating back to the mid-1800s) and any existing information and reports relating to the site and surrounding area.

- ▶ Potential for contamination from the current or contemporary site uses by undertaking a site walkover.
- ▶ Sensitive receptors such as groundwater aquifers and geotechnical ground hazards through a review of published geological, hydrogeological and hydrological records.
- ▶ Nearby environmentally sensitive areas such as protected groundwater bodies, surface water features etc through a review of available public information and up-to-date regulatory information from relevant authorities.

1.10 The objective of this report is therefore to determine the contaminative status of the site and to provide a general indication of the likely geoenvironmental issues which may be present. Information on likely geotechnical conditions and hazards is also included.

Report Structure, Limitations & Changes

- 1.11 The report structure generally follows the pollution linkage approach described above. Chapter 2 of the report provides information relating to the "sources" of potential contamination through a study of current and historical land uses, whilst the sensitivity and anthropology information in Chapter 3 relates to the "receptors" and "pathways" components. Report conclusions and recommendations, including a summary of the conceptual site model and risk assessment Appendix, are set out in Chapter 4.
- 1.12 This Phase 1 Desk Study has been undertaken in accordance with our Terms & Conditions. Full details on limitations and reliance are provided in those Terms. Third party information which has been reviewed and used to inform the assessments presented herein, including public records held by various regulatory authorities and environmental database data has been assumed to be true and accurate.
- 1.13 This assessment has been carried out to determine the potential risks posed to future end users, along with other key receptors, based on the current development. Should revisions in the development proposals result in a change any assessment parameters detailed in this report, a re-assessment of the risk should be carried out.

2.0 Land Use

- 2.1 This chapter identifies and provides information on any potential on-site and off-site "sources" of contamination within the source-pathway-receptor model. The chapter includes a review of information obtained from photographic records, publicly recorded information on environmental issues and controls within relevant distances of the site (which may indicate the presence of potential source(s) of contamination, such as licensed landfills), available planning records obtained from regulatory websites and OS historical mapping. A summary of the identified sources and potential contaminants are given at the end of the chapter.

Site Description

- 2.2 A site walkover was undertaken by a qualified consultant from Lustre on 9th September 2024. The Cluster Facilities Manager from Workspace was present throughout the site walkover and granted access to 20 - 30 Greyfriars Road and external areas.

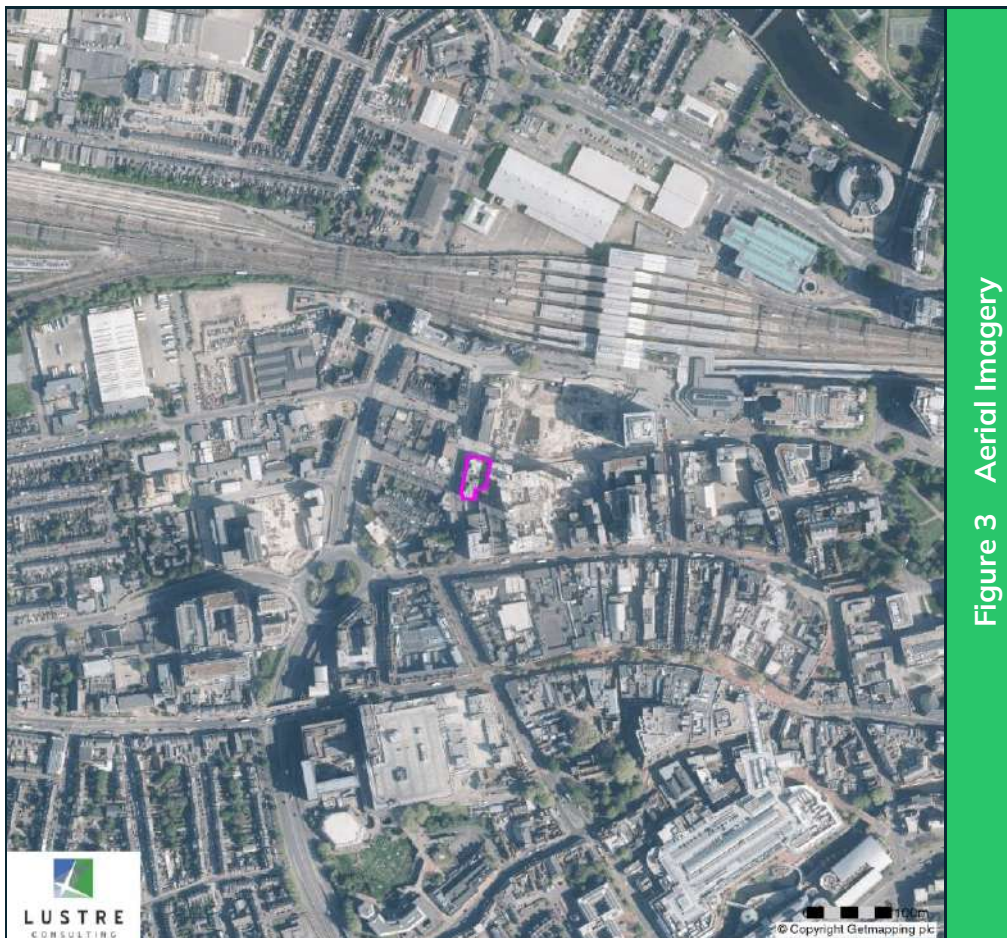

Figure 3 Aerial Imagery

Aerial View of the Carpark

Access from Gerrard Street

- 2.3 At the time of the site walkover the site consisted of 20 – 30 Greyfriars road which comprised a six-storey office building with combined undercroft and basement car parking space. The site is located on the corner between Greyfriars Road to the west and Gerrard Street to the North. Access was afforded via the car park entrance from Gerrard Street.
- 2.4 The building was still in use as office space at the time of the walkover, however it is noted that the remaining tenancies are due to be complete in 2025. The ground floor of the building comprised an entrance lobby as well as toilets and the building's network room. Floors 1 – 5 comprised office space with a plant room (for 30 Greyfriars Road) located on the sixth floor of the building.
- 2.5 The car parking area was accessed from Gerrard Street to the north of the site and was noted to be laid to concrete. It comprised an external area which extended to the western perimeter of the site, beneath the building to form an area of undercroft car parking. The undercroft car parking also extended below ground beneath the external area to form a basement parking area. Within the area of undercroft car park was a second plant room for 20 Greyfriars Road and within the basement a cycle store was also noted.
- 2.6 Based on the observations during the site walkover, the hardstanding (where present) was generally noted to be in good/fair condition. No significant or widespread cracking/damage was observed.

- 2.7 Both onsite and within the surrounding area, topography was noted to be variable. Greyfriars Road was noted to be present on a natural slope which reduced downwards by ~4m from south to north across the length of the site. The neighbouring area to the east was also noted to be at the same level as Gerrard Street to the north of the site. This believed to be as a result of development within this area.
- 2.8 The undercroft car parking area was noted to follow the topography of Greyfriars Road. However, to facilitate the development of the basement, ground level on site was noted to have been reduced to afford its construction.

The Undercroft Car Parking towards the West

Basement Parking and Interceptor

Observations on Ground Stability & Structural Damage

- 2.9 No evidence of ground stability hazards or structural damage was observed on site. However, this report does not constitute a structural survey or similar survey.

Bulk Storage of Fuels & Hazardous Material

- 2.10 Lustre has not been made aware of, or observed, any current or former bulk above ground fuel storage areas/ hazardous material storage on site. No evidence of any current underground fuel tanks (e.g. unexplained manhole covers, vents, fill points etc) was noted during the site walkover.
- 2.11 Small-scale hazardous material storage was not observed during the walkover.

Asbestos Containing Soils (ACS)

- 2.12 ACM was commonly used in construction and refurbishment projects until their use was prohibited in 1999. Given the age of the building(s) present on site (including any refurbishment works), the potential for ACM to be present within the building fabric and curtilage is possible. No obvious asbestos containing materials (ACM) were observed during the site walkover. However, the inspection does not constitute an asbestos survey.
- 2.13 Soil contamination from asbestos can be caused through inappropriate use and poor care of ACM in the building fabric and curtilage causing cross contamination during historical demolition or renovation works. ACS can also be encountered within infilled land and/or imported sub-base / fill materials associated with previous construction or renovation works (such as the construction of a new hardstanding). The potential for ACS to be present underlying the hardstanding should be considered.

Waste

- 2.14 Based on the site use as an office, potentially contaminative waste streams are not considered likely to be produced in quantities to constitute a source. Hazardous waste items are anticipated to comprise arisings such as printer cartridges, batteries and cleaning chemicals. The majority of waste types are anticipated to comprise mixed dry recycling, general waste and food waste.
- 2.15 Wastes generated on site are likely removed by a licensed waste carrier as evidenced by the 1100L bins identified externally within the refuse area. It is anticipated that formal waste collection by a licensed waste carrier for hazardous waste streams is also conducted. From the observations made on site, housekeeping appears to be generally good.

Drainage

- 2.16 Only sanitary wastewater, surface water run-off (from roof areas and hardstanding) is generated on site. No evidence of activities that would require a Discharge Consent was observed.
- 2.17 A formal drainage network was observed on site within hardstanding areas as evidenced by drainage covers. This included three manhole covers indicative of an oil / water interceptor which was identified within the basement parking area. Lustre has not been

made aware of any oil / water interceptors within the site drainage system by the Client and existing drainage plans were not made available for viewing.

- 2.18 No surface water features were observed on site.

Persistent Organic Pollutants (POPs, inc. Polychlorinated Biphenyls (PCBs))

- 2.19 No sub-stations, high voltage cables (in excess of 100kV) or other potential sources of PCB were identified at the site.
- 2.20 No other specific POP point sources were identified during the site inspection that could have adversely impacted soils on site.

Invasive Species

- 2.21 No invasive species (e.g. Japanese knotweed, Giant Hogweed, Himalayan Balsam) were identified during the site walkover, however the site visit conducted does not constitute a full 'injurious weeds and invasive plants' survey.

Potential Off-site Sources / Points of Interest

- 2.22 During the site walkover, it was noted that substantial construction was occurring along Gerrard Street neighbouring the site, which was later identified as the Station Hill Redevelopment.

Further Surveys

- 2.23 Whilst the site walkover discussion may reference observations regarding the presence of features/issues such as invasive species, ACM, site drainage and evidence of structural abnormalities, this report does not constitute specialist surveys on these matters. Should further specialist surveys be carried out in this regard, the findings of these should be reported to Lustre so that we may determine if this has any discernible impact on the findings of this report.

Public Record Information

- 2.24 Information on potentially significant environmental issues and controls at the site and surrounding area may be held on public records by various regulatory authorities. Information referenced in this Chapter has been sourced directly from the regulatory

authorities and from the Landmark database (data summarised within relevant distances of the site centre). A copy of the Envirocheck report is attached at Appendix A. A summary of the significant environmental issues and controls in the Envirocheck report is summarised in the following table.

Table 2 Regulatory Information

Public Record	Features
Environmental Permits and Controls	No Local Authority Pollution Prevention and Controls or Integrated Pollution Prevention Controls have been identified within 250m of the subject site.
Pollution Incidents to Controlled Waters	One pollution incident to controlled waters has been identified within 250m from the subject site: ▶ 151m NE - Incident occurred on 29th April 1993 and pertains to the release of oils - unknown and was assessed as a Category 3 - Minor Incident.
Hazardous Substances	There are no hazardous substances (e.g. Control of Major Accident Hazards (COMAH), Notification of Installations Handling Hazardous Substances (NIHHS) or Planning Hazardous Substance Consents) recorded within 250m. No BGS recorded landfill sites have been identified within 1km of the subject site.
Landfill Sites	Two historical landfill sites have been identified within 1km from the subject site: ▶ 819m N operated by Not Supplied under licence reference EAHLD13262 with landfilling taking place between (31st December 1970 - 31st December 1979). The record states that deposited waste included commercial and household waste, and liquid sludge. ▶ 978m W operated by Not Supplied under licence reference EAHLD13278 with landfilling taking place between (31st December 1950 - 31st December 1959). The record states that deposited waste included inert waste.
Waste Management Facilities	No Local Authority Recorded Landfill Sites or Registered Landfill Sites have been identified within 1km of the subject site. No Licensed Waste Management Facilities or Registered Waste Transfer, Treatment or Disposal sites have been identified within 250m of the subject site. No on-site trade directory entries have been identified from environmental database records.
Contemporary Trade Directory Entries	40 contemporary trade directory entries have been listed within 250m from the subject site. The closest entry is located 23m NW for a pest & vermin control (Reading Pest Control), which is listed as active. Of the 40 entries only 9 are active. The following trade classifications are recorded within 250m: pest & vermin control, shop fittings manufacturers, jewellery manufacturers & repairers, medical equipment maintenance & repairs, dry cleaners, printers, telecommunications equipment & systems, tyre dealers, cleaning services - domestic, office furniture & equipment, garage services, car

**Table 2 Regulatory Information**

Public Record	Features
	dealers - used, water softeners, mobile phone accessories and car kits, photographic processors, railways, perfume suppliers, commercial vehicle dealers, carpet, curtain & upholstery cleaners, mot testing centres, sheet metal work, cash registers & check-out equipment, bookbinding & equipment, bookbinders, air conditioning & refrigeration contractors, glass fibre - moulding, bags, belts & accessories - manufacturers & suppliers, garage mechanics, water coolers, concrete reinforcements.
Petrol Filling Stations (PFS)	No fuel station entries have been identified within 250m of the subject site.

Review of Regulatory Information

- 2.25 A search of planning records held by Reading Borough Council was undertaken for 20 – 30 Greyfriars Road as well as the immediate postcode (RG1 1NL). Environmentally pertinent information revealed by this search is detailed below.
- 2.26 Records revealed two existing planning applications which were granted on 5th April 2017 (Ref: PL/17/0229 / App. No. 170229) and 10th June 2020 (Ref: PL/20/0211 / App. No. 200211) both for the subject site's change of use from Class B1 (offices) to C3 (dwellinghouses). These applications proposed the refurbishment of 20-30 Greyfriars Road into 43 residential units.

Previous Phase I Desk Study by Peter Brett Associates LLP, 2017

- 2.27 These applications included a Phase I Ground Condition Assessment which was completed in January 2017 by Peter Brett Associates LLP (ref: 40388 / 3501 (20 G R) CBH/PJ/CC GEO Phase 1 - Rev 01). Three potential sources of contamination were identified:
- ▶ The historical development which had occurred on site during the demolition of the former residential dwellings and the construction of the site to its current layout.
 - ▶ One minor source of contamination was identified on site relating to the potential oil water interceptor within the basement car park. This was however concluded to only present a localised or small-scale source given the recent construction of the building (1988 – 1993).

- An infilled water feature identified <50m north of the site was identified to have the potential to pose a risk from metals, hydrocarbons and ground gases.

2.28 The desk study found that the potential for site wide contamination was very low, based on the past use as residential dwellings and the most recent office use. As such risks to human health and groundwater were concluded to be very low and the risk to the buildings / services concluded as low.

The Station Hill Development

2.29 Substantial re-development of the area neighbouring the site to the northeast is proposed. The development is noted to comprise a mix of residential and commercial use tower blocks with public open space in between (Planning Ref: PL/07/0202, PL/19/2032, PL/13/0440). The three phases of development are illustrated within Figure 4 and 20-30 Greyfriars Road has been highlighted in yellow.

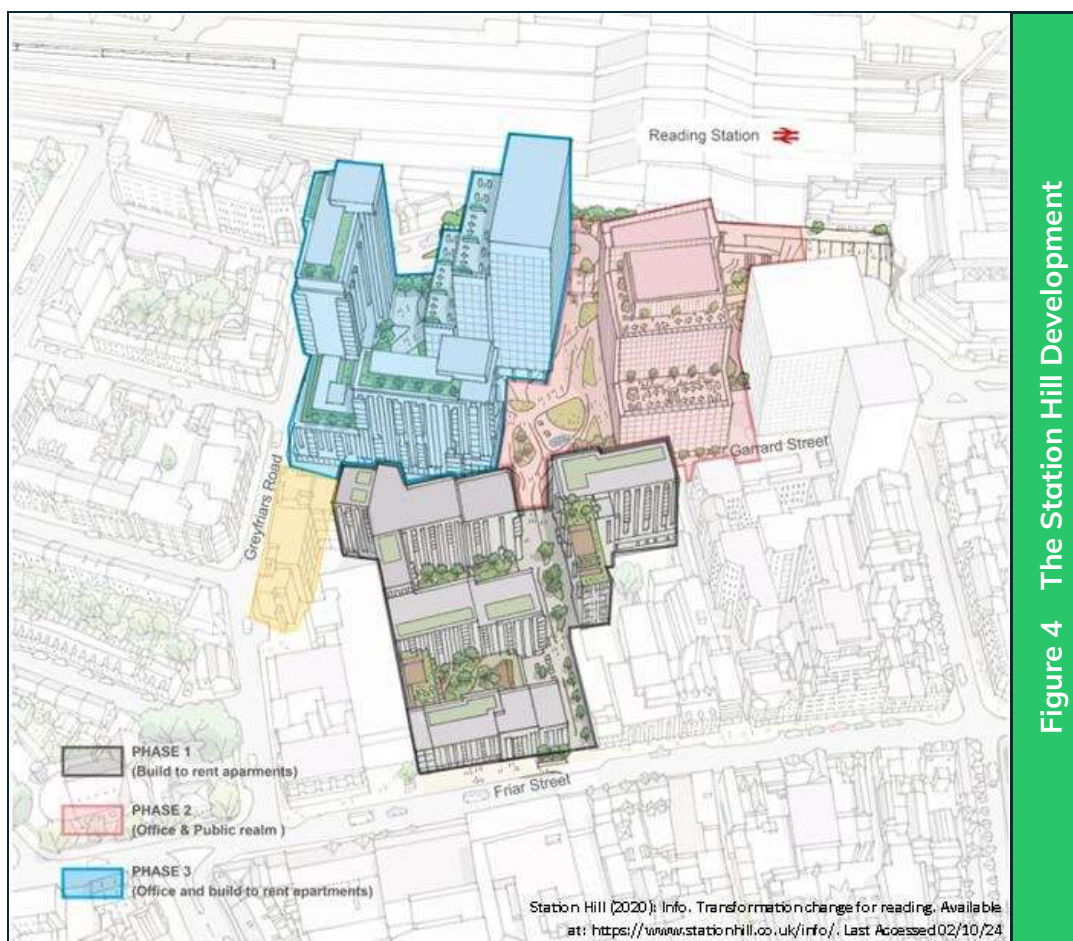

Figure 4 The Station Hill Development

- 2.30 During the site walkover it was noted that building works were being undertaken above ground and as such it is anticipated that any required remedial works have already been undertaken below ground. Therefore, any previous industrial land uses situated within the area of the Station Hill Development are anticipated to have been investigated for contamination and remediated where necessary.

Site History

- 2.31 The site history has been assessed by reviewing historical Ordnance Survey maps provided by Landmark and aerial photographic imagery from Google Earth. Relevant maps are reproduced in Appendix B. The historical development of the site and the surrounding area are summarised in the following section. Where features are identified as having a potential impact on the proposed development, an indication of potential contaminants has been provided at the end of the Chapter.
- 2.32 It is noted that the mapping process adopted in generating the historical Ordnance Survey records (mapping intervals/frequency, scale, inclusion/exclusion of features etc), may result in an incomplete account of a site's history. Changes in land use between mapping dates, or small yet potentially contaminative land uses, may not be identified from the records. The following account is therefore based solely on the information provided in the mapping records and the dates listed should be considered as approximate.

Table 3 On Site History		
On Site Land Use	Date Features Present	Date Features Removed
The site was occupied by residential housing	1879	1988
The residential housing has been demolished and replaced with 20 – 30 Greyfriars Road. The site layout is consistent with that identified during the site walkover.	1988	Present

- 2.33 Environmentally pertinent historical information from the immediate surrounding area (within 250m) has been summarised below:
- ▶ An electricity substation is noted immediately adjacent to the southeastern boundary from 1968 – 1984 until the present day.

- ▶ An area of excavated ground is noted ~50m northeast of the site between 1899 and 1912 where it was infilled and later developed becoming a Garage in 1957 – 1959 and a multi-storey car park and Foster Wheeler House in 1977 – 1989. The site was again redeveloped in 2020 as part of the Station Hill redevelopment.
- ▶ A smithy is noted ~75m southeast of the subject site from 1957 – 1959 until 1962 – 1972 when the smithy is redeveloped into an office building which was demolished in 2020 to be redeveloped as part of the Station Hill redevelopment (Ref: PL/07/0202).
- ▶ Two warehouses are noted ~75m east and southeast from 1962 – 1972 until 1973 – 1974 where these two warehouses are demolished, and the site appears to be occupied by an office building.
- ▶ A coal yard is noted ~75m east of the subject site from 1968 – 1984 until 1973 – 1974 where the site appears to be occupied by an office building,
- ▶ A factory is noted ~80m north of the subject site from 1957 – 1959 until 1977 – 1989 where the site is demolished and redeveloped in 1984 – 1988 into an office building. The site is labelled as a furniture factory from 1968 – 1984.
- ▶ A garage with a tank is noted ~80m northeast from 1962 – 1972 until 1973 – 1974 where the site is cleared and later developed in 1977 – 1989 where the site becomes a multi-storey car park. The tank is labelled on the mapping from 1968 – 1984 only.
- ▶ A coal yard is noted ~110m west of the site from 1962 – 1972 until 1980 – 1988 where the site is vacant before being developed in 1988 into an office building.
- ▶ A smithy is noted ~115m east of the subject site from 1912 until 1931 where the site is no longer labelled as a smithy but is still occupied by a building.
- ▶ A builder's yard is noted ~125m northwest of the subject site from 1968 – 1984 until at least 2022 where the site was redeveloped into residential housing.
- ▶ A Rifle Factory is noted ~150m north of the site from 1879 until 1899 when the site becomes unlabelled until 1968 – 1984 where the former factory is redeveloped to

form part of Phoenix House and again in 1993 to form an office building. From a review of historic newspaper records the Rifle Factory was operated by William Soper who later went into liquidation in approximately 1881.

- ▶ Two warehouses are noted adjacent to one another ~150m north of the subject site from 1957 – 1959 until 1968 – 1984 where the warehouses are redeveloped to form part of Phoenix House and again in 1993 to form an office building.
- ▶ A garage is noted ~200m northwest of the subject site from 1968 – 1984 until 1977 – 1989 where the site is no longer labelled, and the use cannot be determined.
- ▶ An industrial estate is noted ~200m west of the site from 1977 – 1989 and remains until the present day.
- ▶ A garage is noted ~200m west of the site from 1980 – 1988 and remains until the present day.
- ▶ A corporation yard is noted ~250m northwest of the subject site from 1957 – 1959 until 1977 – 1989 where the site is no longer labelled, and the use cannot be determined.
- ▶ A garage is noted ~250m northeast of the subject site from 1968 – 1984 until 1977 – 1989 where the site becomes a Petrol Filling Station until 1980 – 1988 where the site is redeveloped into Reading Train Station.
- ▶ A garage is noted ~225m southwest of the subject site from 1957 – 1959 until 1968 – 1984 where the site is excavated to afford space for the A239.
- ▶ A bus depot and garage are noted ~230m and ~190m, respectively, southwest of the subject site from 1957 – 1959 until 1988 where both sites are redeveloped to become a depot. The site layout after 1988 is reflective of the site layout identified from 2003 on aerial photography, which appears to comprise a logistics depot.
- ▶ A garage is noted ~250m east of the subject site from 1957 – 1959 until 1977 – 1989 where the site is no longer labelled as a garage, but no other land use can be discerned from the site layout.

- ▶ A Timber Yard is noted ~250m northwest between 1899 and 1957 – 1959 where the site becomes a part of the railway line as well as housing and a fire station.

Summary of Identified Potential Sources of Contamination

- 2.34 This section has assessed both the current and historical uses of the site and surrounding areas, as well as publicly available regulatory information. In accordance with the LCRM guidance, this assessment has allowed potential sources of contamination to be identified.
- 2.35 Based on our understanding, it is considered that some potential sources can be discounted at this stage of the assessment. Potential sources of contamination have only been discounted where sufficient evidence has been gathered to indicate that the particular source, for reasons relating to the viability of its presence/significance, need not be considered further.
- 2.36 The following off-site sources of potential contamination have not been considered further in this assessment given the time that has elapsed since contaminative operations ceased, any residual contamination will have likely dispersed:
- ▶ The area of excavated land present ~50m northeast of the site from 1899 until 1912 when it was infilled.
 - ▶ The smithy noted ~115m east of the subject site from 1912 until 1931.
 - ▶ The Rifle Factory noted ~150m north of the subject site from 1879 until 1899.
- 2.37 These offsite sources have been discounted given they were redeveloped after the introduction of the Environmental Protection Act (1990) and as such planning controls will have required remediation of gross / mobile contamination preventing off-site impact. They all appear within the footprint of the Station Hill Development which commenced circa 2020t:
- ▶ The garage present ~50m northeast of the site between 1957 – 1959 until 1977 – 1989 where the site became a multi-storey car park and Foster Wheeler House (an office building).

- ▶ The smithy noted ~75m southeast of the subject site from 1957 – 1959 until 1962 – 1972 when the site was redeveloped into an office building.
- ▶ The two warehouses noted ~75m east and southeast from 1962 – 1972 until 1973 – 1974 when they are demolished, and the site appeared to be occupied by an office building.
- ▶ The coal yard noted ~75m east of the subject site from 1968 – 1984 until 1973 – 1974 when the site appeared to be occupied by an office building.
- ▶ The factory noted ~80m north of the subject site from 1957 – 1959 until 1977 – 1989 when the site was demolished and later redeveloped in 1984 – 1988 into an office building. The site is labelled as a furniture factory from 1968 – 1984.
- ▶ The garage with a tank noted ~80m northeast from 1962 – 1972 until 1973 – 1974 when the site was cleared and later developed in 1977 – 1989 to a multi-storey car park. The tank was labelled on the mapping from 1968 – 1984 only.

2.38 The builder's yard noted ~125m northwest of the subject site from 1968 – 1984 until at least 2022 where the site was redeveloped into residential housing. This site has also been discounted due to development commencing after the introduction of the Environmental Protection Act (1990) and its subsequent contaminated land controls.

2.39 The garage noted ~225m southwest of the subject site from 1957 – 1959 has also been discounted given the site was excavated to afford space for the A239 in 1968 – 1984. This process would have removed any potentially contaminated soils which may have had the potential to pose a risk to the subject site.

2.40 Viable potential sources of contamination which have been carried forward into the conceptual model and risk assessment are set out below.

On-Site Sources - Current

2.41 The site's most recent use as a commercial office represents a minor potentially contaminative land use. Contamination may be present from minor sporadic leaks of fuels and oils from parked vehicles. Based on the age of the building asbestos containing

materials may be present within the fabric of the building. No specific asbestos containing materials were observed during the walkover although this does not constitute a full asbestos survey. Hardstanding present across the site will likely afford some protection to the underlying ground from any such small-scale hydrocarbon releases from parked cars as well as the degradation of any asbestos containing materials.

On-site Sources - Historical

- 2.42 Historical mapping records show that the site has undergone periods of construction and subsequent demolition. The site was also occupied by residential dwellings between 1879 and 1988. Domestic dwellings represent a minor contaminative land use with the potential introduction of contaminants into the subsurface typically through bonfires and spreading of ash in the garden.
- 2.43 However, waste demolition arisings and soils related to the previous residential land use are unlikely to have been retained and spread on site. Given the presence of the basement parking beneath the site, these soils are likely to have been removed and disposed of offsite. As such any remaining residual Made Ground on site is anticipated to be limited to the perimeter of the site beneath existing (and proposed) hardstanding.

Off-site Sources – Historical

- 2.44 The following off-site land uses (taken from mapping records) have been considered further in this assessment as viable potential off-site sources of contamination:
- ▶ The coal yard noted ~110m west of the site from 1962 – 1972 until 1980 – 1988 when the site was mapped as vacant before being developed in 1988 into an office building.
 - ▶ The two warehouses noted adjacent to one another ~150m north of the subject site from 1957 – 1959 until 1968 – 1984 when the warehouses were redeveloped to form part of Phoenix House and redeveloped again in 1993 to form an office building.
 - ▶ The garage noted ~200m northwest of the subject site from 1968 – 1984 until 1977 – 1989 when the site was no longer labelled, and the use cannot be determined.

- ▶ The industrial estate noted ~200m west of the site from 1977 – 1989 which remains until the present day.
- ▶ The garage noted ~200m west of the site from 1980 – 1988 which remains until the present day.
- ▶ The bus depot and garage noted ~230m and ~190m, respectively, southwest of the subject site from 1957 – 1959 until 1988 where both sites were redeveloped to become a depot until the present day.
- ▶ The Timber Yard noted ~250m northwest between 1899 and 1957 – 1959 when the site became a part of the railway line as well as housing and a fire station.
- ▶ The garage noted ~250m east of the subject site from 1957 – 1959 until 1977 – 1989 when the site is no longer labelled as a garage, but no other land use can be discerned from the site layout.
- ▶ The garage noted ~250m northeast of the subject site from 1968 – 1984 until 1977 – 1989 when the site became a Petrol Filling Station. The site was later redeveloped in 1980 – 1988 to form Reading Train Station.
- ▶ The corporation yard noted ~250m northwest of the subject site from 1957 – 1959 until 1977 – 1989 when the site was no longer labelled, and the site use could not be determined.

2.45 A wide range of potential contaminants have been considered from these historic offsite land uses including asbestos, metals, inorganics, PAH, TPH, phenols, VOCs and SVOCs.

Off-site Sources – Potential Sources Identified from Regulatory Information

2.46 No off-site pollution incidents have been identified as potential sources of contamination. Given the time that has elapsed since the pollution incidents occurred and the recorded severity, it is unlikely that contamination remains which can pose an unacceptable risk to the subject site. It is also likely that these pollution incidents are indistinguishable from the general surrounding historic industrial land use and as such are unlikely to exist as point sources.

- 2.47 No off-site petrol filling stations are present within close proximity to the site that would require further consideration.
- 2.48 No non-landfill waste disposal sites have been identified within relevant distances which could impact the subject site.

Off-site Sources – Landfill Sites

- 2.49 Based on the landfill information reviewed as part of the Envirocheck database, off-site ground gas sources have not been considered further given the low likelihood for residual contaminants (gas and landfill leachate) to migrate onto site. Any ground gases or leachate would have dissipated and dispersed given the last input dates as well as the significant distance from the subject site (1979 for the landfill 819m north of the site and 1959 for the landfill 978m west of the site).

3.0 Sensitivity & Anthropology

Introduction

- 3.1 This chapter provides information relating to on-site and off-site 'pathways' and 'receptors' and includes a review of the geology, hydrogeology, hydrology and ecological setting of the site. A general assessment and review of the site anthropology, such as identified human / built environment receptors, including current and future site occupiers, below ground structures, flora etc is also provided. A summary of identified receptors and site-specific pollutant linkages is given at the end of the chapter. Any pathways (contaminant migration, exposure pathways), which can be discounted in conceptual terms (i.e. considering the unviable nature of the pathway given the proposed development setting or local geology/hydrogeology etc), are discussed at the end of the chapter.

Geology

- 3.2 The 1:50,000 British Geological Survey (BGS) map (Sheet 268)¹ and the BGS website (National Geoscience Information Service)² show the site to be directly underlain by superficial deposits of the Taplow Gravel Member comprising sand and gravel with local lenses of silt, clay or peat. Bedrock geology is listed as the Seaford Newhaven Chalk Formations (Undifferentiated) comprising white Chalk.
- 3.3 The site is also located on the boundary with superficial deposits of Alluvium to the north (comprising clay, silt, sand and gravel) as such there is the potential for Alluvium to also be present beneath the site. The BGS Lexicon describes these soils as "typically encountered as soft to firm consolidated, compressible silty clay, but can contain layers of silt, sand, peat and basal gravel". It is also noted that "a stronger, desiccated surface zone may be present".
- 3.4 Historical mapping records show that the site has undergone periods of construction and subsequent demolition. However, given the presence of a basement beneath the site, any residual Made Ground that has been retained is likely only present along the perimeter of the site beneath existing and proposed hardstanding.

¹ BGS Solid and Drift Map Sheet 268

² Information from BGS website: www.bgs.ac.uk consulted in month of report issue

- 3.5 Given the depth of the basement level and local topography on site, the geology underlying the site may differ to that recorded on the BGS Records (i.e. superficial deposits may have been removed).
- 3.6 A previous site investigation undertaken in November 1981 by Peter Brett Associates was included within the Phase I Desk Study produced in January 2017 (ref: 40388 / 3501 (20 G R) CBH/PJ/CC GEO Phase 1 - Rev 01). This investigation is understood to have been completed to facilitate the construction of the existing building and basement. Two cable percussive boreholes were sunk to 15.15m bgl (BH1) and 16.45m bgl (BH4). A summary of the ground conditions encountered is provided below:
- ▶ Made Ground was proven to a maximum depth of 0.4m bgl
 - ▶ Taplow Gravel Formation: proven to depths between 2.35m bgl and 5m bgl comprising silt, sand and gravel.
 - ▶ Seaford and Newhaven Chalk Formations (Undifferentiated): proven to a maximum depth of 16.45m bgl and encountered as weak to moderately weak chalk.
 - ▶ Groundwater was encountered within both boreholes with the overnight groundwater level recorded as 2.95m bgl within BH1 and 3.35m bgl within BH4.
- 3.7 Given the depths that Taplow Gravel was encountered, it is anticipated that most of this deposit has been removed during the excavation of the basement.
- 3.8 The resting groundwater depth encountered during the previous site investigation also demonstrated that groundwater sits within the Taplow Gravel. As such it is likely that the natural groundwater flow has been disrupted.

Ground Hazards

- 3.9 BGS data has also been reviewed to determine potential ground stability hazards which may affect the site. The table below summarises the ground stability hazards anticipated on the subject site based upon the expected ground model.

**Table 4 Ground Hazards On-Site**

Hazard Type	Hazard Potential
Coal Mining Affected Area	None
Non-Coal Mining Affected Area	Rare
Potential for Collapsible Ground Stability Hazards	Very Low
Potential for Compressible Ground Stability Hazards	Moderate
Potential for Ground Dissolution Stability Hazards	Low
Potential for Landslide Ground Stability Hazards	Very Low
Potential for Running Sand Ground Stability Hazards	Low
Potential for Shrinking or Swelling Clay Ground Stability Hazards	Very Low

3.10 The BGS also holds data on non-coal mining areas, natural cavities and radon, and the Coal Authority holds data on coal mining affected areas for the UK. Data collated by Landmark on these matters (sites/features within 1km of the subject site) are presented below.

Table 5 BGS Sites & Radon

Category	Details
BGS Recorded Mineral Sites	26 BGS Recorded Mineral Sites have been identified within 1km from the subject site relating to the extraction of soils from the Seaford Chalk Formation.
	The closest site has been identified 703 – 708m S at Reading Chalk Mine. Mineral site operated as an underground site and the status is listed as ceased.
	The remaining 28 BGS Recorded Mineral Sites relating to the extraction of soils from the Seaford Chalk Formation were recorded 727m – 955m. Mineral sites operated as underground sites, and the statuses are listed as ceased.
	2 BGS Recorded Mineral Sites have been identified within 1km from the subject site relating to the extraction of soils from the Lynch Hill Gravel Member:
	▶ 972m S at Coley Gravel Pit. Mineral site operated as an opencast site and the status is listed as ceased. ▶ 981m S at Coley Gravel Pit. Mineral site operated as an opencast site and the status is listed as ceased.
	1 BGS Recorded Mineral Sites have been identified 993m S from the subject site relating to the extraction of soils from the Lambeth Group at Coley Pottery. The mineral site operated as an opencast site and the status is listed as ceased.

Table 5 BGS Sites & Radon

Category	Details
Man-Made Mining Cavities	18 man-made mining cavities have been identified within 1km from the subject site. The closest cavities have been identified 675 – 684m (4 entries) and relates to 11 possible mine workings/ground anomalies as well as a shaft entry mine working/ground anomalies within the Taplow Gravel Member, Seaford and Newhaven Undifferentiated Chalk and Lambeth Group. The remaining 14 are located 730 – 1000m from the subject site and relate to possible mine workings/ground anomalies as well as a shaft entry mine working/ground anomalies within the Taplow Gravel Member, Seaford and Newhaven Undifferentiated Chalk and Lambeth Group.
Natural Cavities	31 natural cavities have been identified within 1km from the subject site. The closest has been identified 297m SW of the site relating to x3 solution pipes within the Seaford and Newhaven Chalk Formation (Undifferentiated). The remaining 30 natural cavities are located between 335m SE and 965m S. They relate to features such as solution pipes as well as solution widened joints or fissures within the Seaford and Newhaven Chalk Formation (Undifferentiated).
Radon Potential - Radon Affected Areas	The property is in an Intermediate probability radon area (1 to 3% of homes are estimated to be at or above the Action Level).

Hydrogeology

- 3.11 The Groundwater Vulnerability Map of England and the DEFRA website³ have been reviewed to determine the aquifer designations.
- 3.12 The Taplow Gravel Member and Alluvium are designated as Secondary A aquifers which is defined by the Environment Agency as an "aquifer formed of permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers." Based on the BGS information reviewed, it is considered that these geologies are permeable, and that shallow groundwater is anticipated beneath the site.

³ Information from DEFRA Website: www.magic.defra.gov.uk consulted in month of report issue

- 3.13 The Seaford and Newhaven Chalk Formations (Undifferentiated) is designated as a Principal aquifer which is defined by the Environment Agency as "layers of rock or drift deposits that have high intergranular and/or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer." Based on the BGS information reviewed, it is considered that the bedrock is relatively permeable, and in hydraulic continuity with the overlying superficial deposits.
- 3.14 The Environment Agency has defined Source Protection Zones (SPZs) for groundwater sources used for public drinking water supply.⁴ No groundwater Source Protection Zones have been identified within 1km of the subject site.
- 2.50 16 groundwater abstractions are recorded within 1km of the site:
- ▶ 161m south-west - Operated by Primark Stores Limited (Cheapside, Reading, Berkshire) and pertains to the abstraction of groundwater for retail: drinking, cooking, sanitary, washing, (small garden), under licence no. 28/39/23/0042.
 - ▶ x4 544m north-west - Operated by Manrose Manufacturing Ltd (Meadow Road, Reading, Berkshire) and pertains to the abstraction of groundwater for other industrial/commercial/public services: non-evaporative cooling, under licence no. 28/39/23/0167.
 - ▶ x2 544m north-west - Operated by Cox & Wyman Ltd (Cardiff Road, Reading, Berkshire) and pertains to the abstraction of groundwater for other industrial/commercial/public services: non-evaporative cooling, under licence no. 28/39/23/0041.
 - ▶ 732m north-west - Operated by Hillier Group Of Companies (Cardiff Road, Reading Point B) and pertains to the abstraction of groundwater for metal: process water, under licence no. 28/39/23/0128.

⁴ These zones show the risk of contamination from any activities that might cause pollution in the area. The maps show three main zones (inner, outer and total catchment) and a fourth zone of special interest.

- ▶ 835m north-west - Operated by British Road Services Ltd (Cardiff Road, READING) and pertains to the abstraction of groundwater for vehicle washing, under licence no. 28/39/23/0024.
- ▶ x4 931m north-east - Operated by White Knight Laundry Services Ltd (72 George Street, Caversham, - Borehole 'A') and pertains to the abstraction of groundwater for industrial; commercial and public services: laundry use, under licence no. 28/39/23/0020.
- ▶ 956m north-west - Operated by Hillier Group Of Companies (Cardiff Road, Reading Point A) and pertains to the abstraction of groundwater for metal: process water, under licence no. 28/39/23/0128.
- ▶ 960m west - Operated by Network Rail Infrastructure Limited (Berkshire Downs Chalk At Cow Lane, Reading, Berkshire) and pertains to the abstraction of groundwater for other industrial/commercial/public services: transfer between sources, under licence no. Th/039/0023/032.
- ▶ 974m north-west - Operated by Pelikaan (Construction) Limited (Rivermead Leisure Complex, Reading) and pertains to the abstraction of groundwater for construction: dewatering, under licence no. Th/039/0023/037.

3.15 No groundwater discharge consents are recorded within 250m of the site.

Hydrology

3.16 The closest surface water feature is the River Kennet, 349m northwest from the subject site. The River Thames is also noted 600m to the north of the subject site.

3.17 River quality information is available for Kennet which is located circa 353m east and is listed as having a GQA grade of B.

3.18 8 surface water abstractions have been identified within 1km of the subject site:

- ▶ x2 590m south-east - Operated by Oracle Shopping Centre Ltd (St.Giles Stream At The Oracle Centre, Reading) and pertains to the abstraction of surface for amenity: lake and pond throughflow, under licence no. 28/39/22/0594.

- ▶ 770m north - Operated by Reading Borough Council (Thames At Christchurch Meadow) and pertains to the abstraction of surface for environmental: non-remedial river/wetland support: lake & pond throughflow, under licence no. 28/39/23/0196 and non-remedial river/wetland support: transfer between sources, under licence no. 28/39/23/0199/Tr.
- ▶ x4 921m north-east - Operated by Reading Hydro Cbs Limited (River Thames At Caversham Weir) and pertains to the abstraction of surface for other environmental improvements: transfer between sources, under licence no. Th/039/0023/022.

3.19 No surface water discharge consents are recorded within 250m of the site.

Environmental Statutory Designations

3.20 A review of the environmental sensitive receptors' database indicates that the site is not located within an ecologically sensitive area. There are no Special Protection Areas, Sites of Special Scientific Interest, Ramsar Sites, Local Nature Reserves, Environmentally Sensitive Areas within 250m of the site.

3.21 The site lies within a Nitrate Vulnerable Zone.

Environmental Sensitivity

3.22 The sensitivity of each of the identified receptors is rated depending upon the environmental setting of the site, the likelihood for pollutant linkages to be present and potential consequence of those potential pollutant linkages. The assessment approach adopted is based on guidance set out in the *NHBC R&D 66*⁵ document.

3.23 Groundwater within the Taplow Gravel Member and Seaford and Newhaven Chalk Formation (Undifferentiated) is anticipated to be in hydraulic connectivity and as such has been considered as one consistent aquifer. This groundwater body is considered to have a Moderately High (M1) sensitivity, which is described in the guidance as being a "recognised major or minor aquifer, moderately vulnerable, with probable use (either direct or via baseflow to a sensitive watercourse). Within formal protection zone or catchment of

⁵ Guidance for the Safe Development of Housing on Land Affected by Contamination R&D66, NHBC, 2008

authorised abstractions for potable or other high-quality uses. Minor, short-term releases of contaminants may be tolerable." This sensitivity classification has been assigned given the designation of the site area as outside a groundwater SPZ. However, the presence of groundwater abstractions nearby, and the expected permeability and high potential for groundwater storage within these geologies has also been considered.

- 3.24 Surface water is considered to have a High (H2) sensitivity, which is described in the guidance as being a "a site within catchment and reasonable proximity (less than 500m) of high-quality watercourse (GQA A/B) or with potential transmission of pollutants via baseflow from an aquifer with little subsurface attenuation or via an interconnected unclassified drain or stream." This sensitivity classification has been assigned given the proximity of the River Kennet 349m east of the site and the potential for baseflow in shallow groundwater.
- 3.25 The sensitivity classifications noted above have been taken into consideration in the development of the conceptual model presented at the rear of this report.

Anthropology

- 3.26 Proposed anthropological receptors at the site are considered to include future residents without private gardens and visitors. In the short term, groundworkers and construction personnel will also be considered.

Summary of Identified Receptors & Site-Specific Pollutant Linkages

- 3.27 A review of the environmental sensitivity and proposed anthropological use of the site has identified the following **receptors**, as detailed below.

Identified Receptors

- ▶ Residents and visitors,
- ▶ Site workers,
- ▶ Ground / construction workers,

- ▶ Shallow groundwater within the Taplow Gravel Member (Secondary A aquifers) and Undifferentiated Seaford and Newhaven Chalk Formation (Principal aquifer,
- ▶ Adjacent land,
- ▶ Below ground structures and foundations, and
- ▶ Potable water pipes.

Viable Pathways and Pollution Linkages

3.28 A number of **viable migration and exposure pathways** and potential pollutant linkages have been identified, whereby a receptor may be exposed to a source. The viable pollutant linkages have then been used to develop a conceptual model. The following is a summary of **viable**, site specific pathways and pollutant linkages to be considered further:

- ▶ Inhalation of toxic vapours, potentially migrating into above ground structures from organic contaminants within the Made Ground, contaminated groundwater or localised spills / leaks. Potential for vapours to migrate through hardstanding and open ground.
- ▶ Hazardous ground gases, potentially generated by the Made Ground or organic-rich natural soils, may migrate into above ground structures and accumulate within building voids and enclosed spaces (resultant risk of asphyxiation and / or explosion).
- ▶ Shallow soil contamination has the potential to vertically migrate downwards into the underlying natural soils and perched or shallow groundwater by leaching and infiltration. These processes are enhanced in areas of soft landscaping due to an increased infiltration potential. Conversely, areas of hardstanding reduce infiltration potential and leaching rates, which results in a lower mobility of any shallow contamination.
- ▶ Vertical mixing of groundwater (assumed to be in hydraulic continuity) between the groundwater bodies.

- ▶ Lateral migration of site-borne contaminants to off-site areas (down hydraulic gradient), via surface water runoff and baseflow. Lateral migration of potentially contaminated shallow groundwater from off-site areas (up hydraulic gradient), impacting on-site groundwater. Lateral migration of ground gases.
- ▶ Below ground concrete structures and foundations are susceptible to chemical attack from aggressive ground conditions (pH and water-soluble sulphate).
- ▶ Potable water pipes are susceptible to chemical attack from shallow soil contamination.

Non-viable Pathways and Pollution Linkages

3.29 The following site-specific pathways and pollutant linkages are not considered to be viable, and therefore discounted from the conceptual model and risk assessment:

- ▶ Development proposals do not include for the provision of either private or communal soft landscaping and therefore following pollutant linkages have been discounted: inhalation of contaminated dust, dermal contact and direct ingestion of contaminated soils and indirect ingestion of contaminated soils sorbed to home-grown produce. Flora as a receptor has also been discounted.

4.0 Conclusions & Next Steps

- 4.1 The information presented in the previous chapters have been compiled and used to create a conceptual model and qualitative risk assessment. The CSM and risk assessment is presented at the end of this Chapter.
- 4.2 The risk ratings assigned in the risk table, and summarised below, are based on information obtained through desk-based research, a site walkover and on our experience in assessing risks from similar sites. The proposed end use of the site, anticipated ground conditions, environmental receptors and viable exposure pathways have been considered.

Geoenvironmental Risk Ratings

- 4.3 In summary, this Phase 1 Desk Study has determined that it is unlikely that contamination is present on site in a circumstance which could lead to unacceptable risks to identified receptors. As illustrated in the risk assessment tables, the risks attributable to viable pollutant linkages were considered to be low and very low.
- 4.4 Historical mapping records show that the site has undergone periods of construction and demolition but given the presence of a basement within the site's existing layout, a thickness of Made Ground is not anticipated. Moreover, the site's most recent use as a commercial office represents a minor potentially contaminative land use. This is further mitigated by the presence of sitewide hardstanding and a formal drainage system.
- 4.5 Offsite, several minor potentially contaminative land uses have been identified within 250m of the subject site. However, these have been discounted given either the time elapsed since contaminative uses and subsequent redevelopment or the distance from the subject site and minor nature of anticipated contamination. In addition, the potential for contaminant dispersal is noted to be high given the nature of the aquifer present beneath the site and surrounding area.
- 4.6 It is important to remember that the qualitative nature of the risk assessment is not absolute. Even if very low and low risks have been assigned to pollutant linkages, the risk cannot be eliminated (i.e. "no risk") at this stage of the assessment. Residual risks will remain and should not be disregarded on the basis that the risk is low.

Planning Considerations & Next Steps

- 4.7 It is understood that this report will be submitted to the local planning authority to support the planning application.
- 4.8 Based on the findings of this assessment **no further works or mitigation measures are required** to ensure the proposed development is suitable for use from a land quality perspective.
- 4.9 A **Non-Specialist Watching Brief** is recommended during the groundworks and construction phase to identify any visual or olfactory evidence of contamination. Should unforeseen contamination be identified, works in that area should stop and Lustre be contacted to assess the suspected contamination.
- 4.10 Independent test certificates relating to imported soils should be obtained for soils to be used within the external courtyard. These test certificates should demonstrate that the soils are suitable for use both physically and chemically to help ensure that the material does not pose an unacceptable risk to future site users. The source of any imported soils should also be obtained to help provide confidence of its suitability.

Advisory Matters

- 4.11 Aside from land contamination issues that require consideration under the planning regime, the findings of this assessment impact other aspects of building design and construction. These items often require action to ensure that you continue to have a safe and complaint site and include matters such as ground hazards foundation design, waste soil classification etc.
- 4.12 A suitable asbestos survey should be undertaken prior to the start of any site refurbishment/demolition works, if not already completed. If encountered, asbestos and asbestos containing materials, should be dealt with in accordance with CAR 2012.
- 4.13 Prior to the demolition of the site, the potential oil / water interceptor located within the basement car park and the adjoining drainage system should be inspected and decommissioned in order to prevent any uncontrolled release of hydrocarbons.

- 4.14 Given the presence of proposed development within the existing partial basement, further consideration could be given to the impact of Radon on the proposed development.
- 4.15 A review of bombing density mapping produced by Zetica UXO indicates that the site was situated within a low bomb density area as shown in Figure 5. This does not however indicate a low risk of encountering UXO. If further understanding regarding the risk of UXO are required, consideration should be given to procuring a UXO risk assessment.

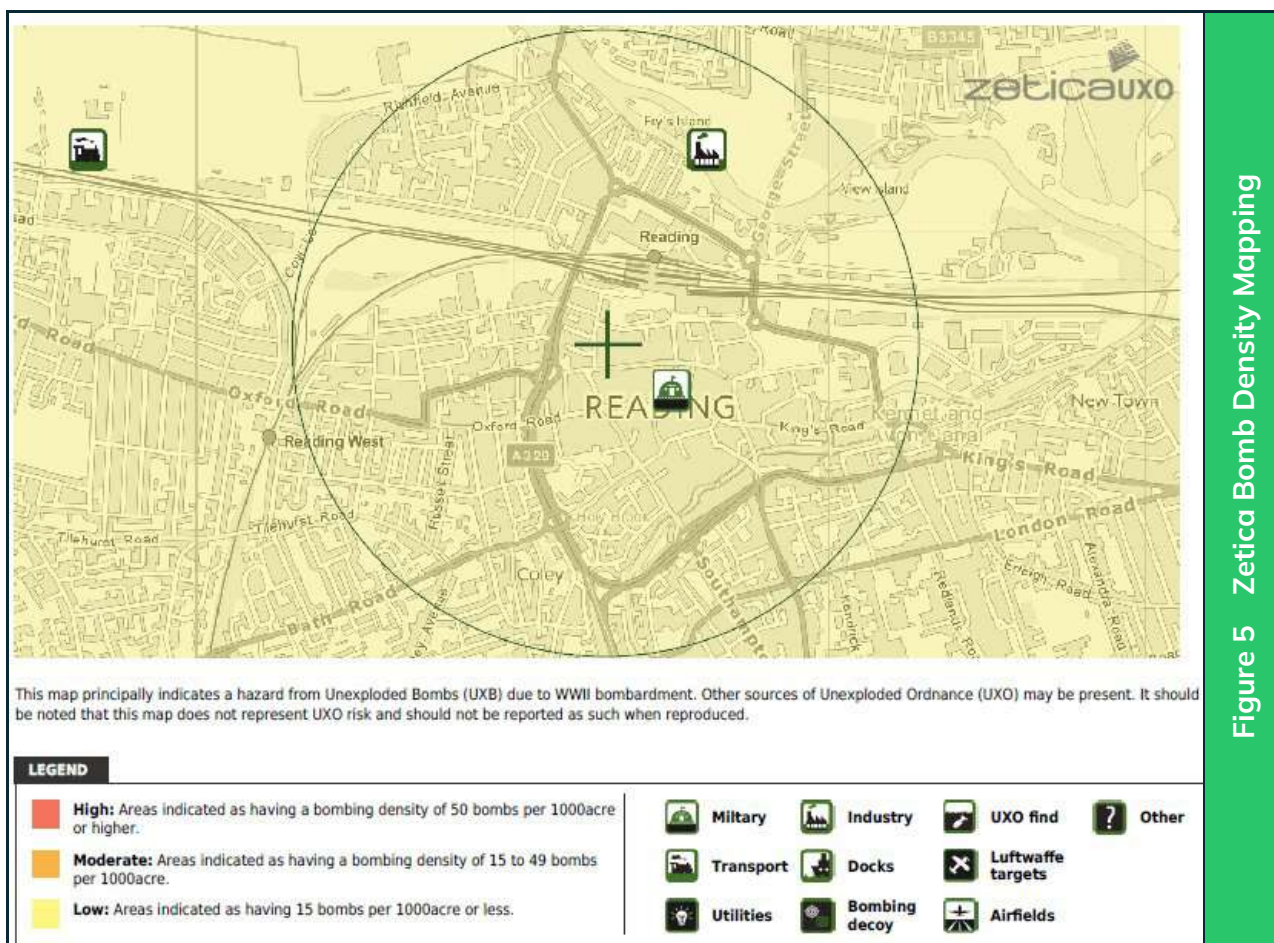

Figure 5 Zetica Bomb Density Mapping

Preliminary Ground Model & Ground Hazard Recommendations

- 4.16 The BGS information shows that the site is underlain by superficial deposits of the Taplow Gravel Member and underlying bedrock geology comprising the Newhaven and Seaford Chalk Formation (Undifferentiated).
- 4.17 Given the size of the proposed development a geotechnical site investigation may be useful to inform foundation design.

- 4.18 Based on the number and frequency of natural cavities within the area it may be useful to ascertain a natural cavity occurrence database report and probability assessment for the site to provide further information on the likely risk from identified ground hazards.
- 4.19 Considering the information from the BGS and previous site investigation conducted by Peter Brett Associates in November 1981 reviewed as part of this Phase 1, shallow groundwater may be present beneath the site. However, it is likely that the natural groundwater flow has been disrupted given the presence of the basement beneath the site. Further information regarding the impact of this on foundation design could be ascertained through a geotechnical ground investigation.
- 4.20 A moderate risk of compressible ground was identified which typically refers to cohesive geologies such as the neighbouring Alluvium. Further consideration of this risk may be useful to help inform foundation design.
- 4.21 Due to the presence of mining activities, further assessment of the risk from mining features and mine sites could be undertaken to provide further clarification.

Comments on Waste Classification

- 4.22 Separate to the human health and wider environmental risks from potential contamination, the presence of some contaminants can also impact the waste spoil disposal costs. Depending on the chemical composition of any Made Ground, soils may require different disposal routes. Should there be a need for the disposal of soils as part of the development, the waste producer should undertake a waste spoil assessment. This must include an assessment of the hazardous nature of the soil by virtue of any contamination (in accordance with the Waste Framework Directive and the Environment Agency's *Technical Guidance WM3 Hazardous Waste*⁶), and possibly Waste Acceptance Criteria (WAC) testing.

Statutory Designation

- 4.23 The National Planning Policy Framework (NPPF) states that "land should be suitable for its new use and as a minimum, after carrying out remediation (if required), the land should **not**

⁶ Technical guidance WM3: Guidance on the Classification and Assessment of Waste (1st Edition 2015). Environment Agency.

be capable of being determined as contaminated land under Part 2A of the Environmental Protection Act 1990". It is our opinion that, based on the findings of this Phase 1 Desk Study, it is unlikely the site would be designated as statutory contaminated land by the Local Authority under the provision of the published Statutory Guidance. It is advisable however, that any recommendations made in this report are implemented in line with current guidance and good practice.

Conceptual Site Model

Greyfriars Road - Reading

ON SITE SOURCE: Shallow Soils Impacted by Current and Historical Site Use

JUSTIFICATION NOTES: A full list of summary notes which provide detail and context to the risk ratings assigned in the table below is given at the end of the table. If specific notes are particularly significant to a certain pollutant linkage, these are referenced in the final column of the table.

CONCEPTUAL SITE MODEL				RISK ASSESSMENT			KEY JUSTIFICATION NOTES
SOURCE - Potential contamination from current / historical site use(s) to impact site Based on historical mapping records, the following have been identified on site: residential.	POTENTIAL CONTAMINANTS - asbestos, metals, inorganics, PAH and TPH	PATHWAY	RECEPTOR	LIKELIHOOD OF OCCURRENCE	CONSEQUENCE (SEVERITY)	POTENTIAL RISK	
		Inhalation of vapours from soils and groundwater	Residents and site visitors	Low Likelihood	Mild	Low	1 - 4
		Inhalation of contaminated dusts, gases and vapours, dermal contact and direct ingestion of contaminated soils	Ground / construction workers	Low Likelihood	Mild	Low	1 - 5
		Vertical migration downwards via leaching and/or saturation of contaminated soils	Shallow groundwater within the interconnected aquifer of the Taplow Gravel Member (Secondary A aquifer) and Undifferentiated Seaford and Newhaven Chalk Formation (Principal Aquifer)	Low Likelihood	Mild	Low	1 - 4, 6 & 7
		Lateral migration of contaminants to down hydraulic gradient areas in groundwater and runoff	Adjacent land	Unlikely	Mild	Very Low	1 - 4 & 7
		Chemical attack from aggressive ground conditions (pH and water soluble sulphate) and shallow contamination	Buried services and below ground structures and foundations	Low Likelihood	Mild	Low	1 - 4 & 9
		Migration and accumulation of gases within building voids and enclosed spaces	Building and site occupants	Very Unlikely	Severe	Acceptably Low	1 - 4
GROUND HAZARDS		Moderate or above ground stability hazards have been identified on site: compressible ground				YES	
NATURAL CAVITIES		Potential risk identified based on PBA cavity database information - nearby cavities.				YES	
MINING		Potential risk identified based on the presence of nearby BGS mineral sites.				YES	

JUSTIFICATION NOTES

NOTE ID	NOTES
1	It is understood that development proposals for the site involve the clearance of the site to afford a 13 storey mixed commercial and residential development comprising 257 residential units. Commercial and amenity space is proposed to the ground floor including the entrance lobby, gym, cafe, external courtyard and co-working area. The ground floor includes the area occupied by the existing partial basement and is therefore below street level in the eastern third of the building footprint. A strip of soft landscaping is proposed within the external courtyard which is anticipated to be comprised of clean imported soils from a reputable supplier given the presence of the basement within the existing development and therefore absence of soils in this location.
2	Historical mapping records show that the site has undergone periods of construction and subsequent demolition. The site was also occupied by residential dwellings between 1879 and 1988. Domestic dwellings represent a minor contaminative land use with the potential introduction of contaminants into the subsurface typically through bonfires and spreading of ash in the garden. However, given the presence of the basement parking present beneath the site, these soils are likely to have been removed and disposed of offsite. As such any remaining residual Made Ground on site is anticipated to be limited to the perimeter of the site beneath existing (and proposed) hardstanding.
3	The site's most recent use as a commercial office represents a minor potentially contaminative land use. Contamination may be present from minor sporadic leaks of fuels and oils from parked vehicles. Based on the age of the building asbestos containing materials may be present within the fabric of the building. No specific asbestos containing materials were observed during the walkover although this does not constitute a full asbestos survey. Hardstanding present across the site will likely afford some protection to the underlying ground from any such small-scale hydrocarbon releases from parked cars as well as the degradation of any asbestos containing materials. In addition it is also noted that there is a formal drainage system with an oil / water interceptor which will inhibit the potential for infiltration of contaminants.
4	Contamination may be generally minor, with possible sporadic localised areas of higher contamination. However, given the proposed development is comprised almost entirely of hardstanding, a pathway is not anticipated to exist between potential localised hotspots of contamination and future site receptors in almost every case. The potential exception to this is the proposed strip of soft landscaping within the external courtyard, however in this case it is expected that clean imported materials will be used from a reputable source.
5	Construction workers - use of appropriate PPE and awareness of potential hazards through 'toolbox' talks.
6	Groundwater within the Taplow Gravel Member and Seaford and Newhaven Chalk Formation (Undifferentiated) is anticipated to be in hydraulic connectivity and as such has been considered as one consistent aquifer. This groundwater body is considered to have a Moderately High (M1) sensitivity, which is described in the guidance as being a "recognised major or minor aquifer, moderately vulnerable, with probable use (either direct or via baseflow to a sensitive watercourse). Within formal protection zone or catchment of authorised abstractions for potable or other high-quality uses. Minor, short-term releases of contaminants may be tolerable." This sensitivity classification has been assigned given the designation of the site area as outside a groundwater SPZ.
7	Considering the information from the BGS and the previous site investigation conducted on site by Peter Brett Associates reviewed as part of this Phase 1, shallow groundwater may be present beneath the site. However, it should be noted that the resting groundwater depth encountered during the previous site investigation has been disrupted by the construction of the basement.
8	Potable water pipes likely laid in natural soils.

Greyfriars Road - Reading

OFF-SITE SOURCES

JUSTIFICATION NOTES: A full list of summary notes which provide detail and context to the risk ratings assigned in the table below is given at the end of the table. If specific notes are particularly significant to a certain pollutant linkage, these are referenced in the final column of the table.

CONCEPTUAL SITE MODEL				RISK ASSESSMENT			KEY JUSTIFICATION NOTES
SOURCE	POTENTIAL CONTAMINANTS	PATHWAY	RECEPTOR	LIKELIHOOD OF OCCURRENCE	CONSEQUENCE (SEVERITY)	POTENTIAL RISK	
Off-site land uses - timber yard, garage (vehicle servicing), builder's yard and petrol filling station	asbestos, metals, inorganics, PAH, TPH, phenols, VOCs and SVOCs	Inhalation of vapours from groundwater	Site occupants	Very Unlikely	Severe	Acceptably Low	1 - 5
		Lateral migration of contaminated groundwater on to the subject site	On-site groundwater	Low Likelihood	Mild	Low	1 - 5

JUSTIFICATION NOTES

NOTE ID	NOTES
1	The following off-site land uses (taken from mapping records) have been considered further in this assessment as viable potential off-site sources of contamination: warehouses, coal yards, factory, garages (vehicle servicing), timber yard, industrial estate. A wide range of potential contaminants have been considered including asbestos, metals, inorganics, PAH, TPH, phenols, VOCs and SVOCs.
2	Groundwater within the Taplow Gravel Member and Seaford and Newhaven Chalk Formation (Undifferentiated) is anticipated to be in hydraulic connectivity and as such has been considered as one consistent aquifer. This groundwater body is considered to have a Moderately High (M1) sensitivity, which is described in the guidance as being a "recognised major or minor aquifer, moderately vulnerable, with probable use (either direct or via baseflow to a sensitive watercourse). Within formal protection zone or catchment of authorised abstractions for potable or other high-quality uses. Minor, short-term releases of contaminants may be tolerable." This sensitivity classification has been assigned given the designation of the site area as outside a groundwater SPZ. However, the presence of groundwater abstractions nearby, and the expected permeability and high potential for groundwater storage within these geologies has also been considered.
3	Considering the information from the BGS and the previous site investigation conducted on site by Peter Brett Associates reviewed as part of this Phase 1, shallow groundwater may be present beneath the site. However, it should be noted that the resting groundwater depth encountered during the previous site investigation has been disrupted by the construction of the basement.
4	It is understood that development proposals for the site involve the clearance of the site to afford a 13 storey mixed commercial and residential development comprising 257 residential units. Commercial and amenity space is proposed to the ground floor including the entrance lobby, gym, cafe and co-working area. The ground floor includes the area occupied by the existing partial basement and is therefore below street level in the eastern third of the building footprint.
5	Several minor potentially contaminative landuses have been identified within 250m of the subject site. These are all noted to relate to small, minor industrial / commercial land uses which are all expected to disperse prior to impact the subject site. This is as a result of either the time elapsed since contaminative uses and subsequent redevelopment or the distance from the subject site and minor nature of anticipated contamination. In addition, the potential for contaminant dispersal is noted to be high given the nature of the aquifer present beneath the site and surrounding area.

ENVIRONMENTAL RISK ASSESSMENT

Introduction

This section assesses the significance of the environmental issues that have been identified on the site or in the surrounding area. This is achieved by developing an initial conceptual model for the site and undertaking a qualitative risk assessment.

The objective of the conceptual model is to identify potential contaminant “source(s)”, “pathways” and target “receptors” relating to the site and surrounding area. The information obtained is described in detail in the Land Use Chapter and the Sensitivity & Anthropology Chapters. This information is then collated and a qualitative risk assessment^{7,8} undertaken to assess the source-pathway-receptor linkages. The potential for a pollution event to occur is evaluated using a risk classification tool⁹. The level of risk is assigned by considering the likelihood that a pollution event might occur with the consequence of its occurrence. The consequence is essentially a measurement of the severity of a hazard (or source) and sensitivity of the receptor (e.g. aquifer type or end user).

The Table presented overleaf details the various components of the site conceptual model and evaluates the risks associated with each viable potential pollution linkage. Where additional explanation is required, Justification Notes have been given at the end of the Table. The risks associated with each potential pollution linkage are also discussed within the report conclusions.

Methodology

The qualitative risk assessment firstly considers the source of contamination and potential contaminants associated with the source(s) (or hazards). As well as the type of source, the extent, concentration and availability of a contaminant is also assessed.

The effect of a hazard on an identified receptor is largely governed by the sensitivity of a receptor. Receptors may typically include people, buildings, animals, plants and local resources (such as groundwater, surface waters, mines etc). A change in the receptor should be considered if the end-use of the site changes, for example, if a commercial site is to be redeveloped into a residential housing estate as a residential occupier is considered more sensitive than a commercial occupier. The presence of contamination (as a potential hazard) does not necessarily mean that there is a risk. It is the exposure pathway and the quantity of contamination that reaches the receptor which may determine the effect on a receptor (such as the integrity of a barrier between a contamination source and receptor).

The risk classifications for both likelihood and consequence is based on methodology presented in Contaminated Land Risk Assessment, A Guide to Good Practice (CIRIA C552, 2001) and has been developed from procedures outlined in the EA's LCRM. The Department for the Environment Transport and the Regions (DETR), with the EA and Institute of Environment & Health, has also published guidance on risk assessment (Guidelines for Environmental Risk Assessment and

⁷ Guidance for the Safe Development of Housing on Land Affected by Contamination R&D66, NHBC, 2008.

⁸ Construction Industry Research and Information Association (CIRIA). Contaminated Land Risk Assessment. A Guide to Good Practice. CIRIA C552 2001.

⁹ Department of the Environment, Transport and the Regions, Environment Agency and Institute of Environmental Health. Guidelines for Environmental Risk Assessment and Management. HMSO July 2000.

Management). The guidance states that the designation of risk is based upon a consideration of both:

- ▶ The magnitude of the potential consequence (severity) of risk occurring which takes into account both the potential severity of the hazard and the sensitivity of the receptor; and
- ▶ The likelihood of an event occurring (probability) which takes into account the both the presence of the hazard and receptor and the integrity of the pathway.

The magnitude of consequence (severity) and likelihood (probability) is defined in the CIRIA guidance, together with examples. The two classifications are then compared (as shown on Table 1) to obtain an estimation of risk for each pollution linkage, ranging from “very high risk” to “very low risk”. A description of the risks and likely actions required is presented in Table 2. The benefit of estimating the risk in this way is that it can be revised after each investigation phase as the conceptual model and corresponding pollution linkages are refined.

Comparison of Consequence VS. Probability

		Consequence			
		Severe	Medium	Mild	Minor
Likelihood	High likelihood	Very high risk	High risk	Moderate risk	Moderate/low risk
	Likely	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely	Moderate/low risk	Low risk	Very low risk	Very low Risk

Description of the Classified Risks and Likely Action Required

Level of Risk	Description of Classification
Very High Risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, or there is evidence that severe harm to a designated receptor is currently happening. If this risk is realised, it is likely to result in significant environmental and financial liability to current and/ or future site owners/ occupiers. Urgent investigation (if not already undertaken) and remediation is likely to be required.
High Risk	Harm is likely to arise to a designated receptor from an identified hazard.

	If risk is realised, it is likely to present a sizeable environmental and financial liability to current and/ or future site owners/ occupiers. Urgent investigation is required, and remediation work may be necessary in the short term and likely over the longer term.
Moderate Risk	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely the harm would be relatively mild. Investigation is normally required to clarify the risk and determine the potential environmental liability. Some remedial works may be required over the longer term.
Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild. Limited investigation may be recommended to clarify the risk, dependant on the sensitivity of the receptor and viewpoint of those of interest. Any remedial works are likely to be fairly limited.
Very Low Risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is likely to be mild or minor.

The acceptability of risk will always depend upon the viewpoint of those of interest, whether it is an occupier of a site, a regulator or stakeholder. As a result, it could be that action will be required to deal with a level of risk even if it is classified as very low.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
