

NOTES

1. All dimensions are to be checked on site prior to the commencement of work and any discrepancy is to be reported to the construction manager before construction.
2. All work is to comply with current Building Regulations and allied legislation.
3. All contractors and sub-contractors must ensure that they have the latest issue of this drawing and details before the commencement of work on site.
4. All materials are to be used and installed in strict compliance with the relevant manufacturers instructions and recommendations.
5. All works on site, managed and implemented as a result of the designs indicated on this drawing, are to be given full consideration for compliance with the Health and Safety CDm Regulations in respect of design and implementation on site and no works are to be undertaken if it is considered that compliance with the Building Regulations cannot be achieved.
6. All dimensions shown in millimetres.
7. Footprint of buildings shown at 10m above ground level.

LEGEND

Proposed two storey		Existing trees to be removed	
Proposed single storey		Permeable patio	
Proposed planting		Grassed areas	
Proposed new planting		Existing trees & planting to remain	
Root protection area (RPA)		Proposed shed for cycle storage min 2 spaces	
Refuse and recycling storage & collection points		Proposed driveway	

LANDSCAPE SPECIFICATION

Landscaping generally to be carried out in accordance with BS.4428. All new trees to be supplied as selected standards unless otherwise noted.

Overall height 3.0-3.5m and 1.8-2.1m, straight stem to BS.3936 Part 1 1992. Trees supplied with bare roots with polythene wrapping or as noted otherwise, and planted in a min of 3.0 litres peat. Planting beds to be excavated and lined with screened topsoil enriched with peat free compost/fertiliser or similar manure 50mm deep, top dressed with 75mm deep forest bark mulch.

Site to be cleared of all builders rubble and rotavated levelled and filled before planting commences. Front gardens to be turfed and rear gardens seeded.

All turfing to BS.3936 1990.

Pernicious weeds are to be treated with translocated herbicide during growing season (spot treated).

Tree and shrub planting to BS.3936 Part 1 1992.

Sub-soil areas below planting to be de-compacted before planting commences.

Tree protection to be carried out in accordance with BS.5837 2012.

SCHEDULE OF IMPLEMENTATION

Please note ALL new planting is to be implemented between the months of November to March in the first planting season following the completion of works

PROPOSED PLANTING LEGEND

Fagus Sylvatica - Common Beech Hedging

Planted in double rows at 600mm c/c and staggered, height 500-750mm, pot size 4 litres.

Fagus Sylvatica (also known as the Common Beech or European Beech) is native to South Wales and the southern United Kingdom and belongs to the family of Fagaceae. This is a popular hedging variety of Fagus Sylvatica, which although deciduous, gets its new leaves early every year. In the autumn, its old leaves drop off very slowly, often retaining on the plant throughout the winter. These features make it suitable for hedging. In fact, beech is one of the most popular deciduous hedging plants in the UK. In the winter season we also have this plant available in bare root form.

Fagus Sylvatica produces new foliage between March and April each year. The shape of the leaves are ovate. New leaves emerge in spring in hues of beautiful green-yellow. As the foliage matures over the summer, the leaves become a deeper green. In autumn, they turn reddish-brown.

Fagus Sylvatica is monoecious, meaning it produces both male and female flowers, which it produces during late April and May. Female flowers grow in pairs and are green. Male flowers are in the form of catkins and droop elegantly from long stalks. After the flowering period, edible beech nuts are produced, which these days, are mainly used to feed livestock. Whole enriched oil-nuts start forming in autumn, around September. The leaves of common beech take some time to decay completely.

Fagus Sylvatica can live for hundreds of years and is UK hardy for all regions of United Kingdom. Beech is wild-life friendly providing shelter and food for many species. It is not overly fussy about soil type but thrives in limestone or chalky soils.

SILVER BIRCH - Betula Pendula

New trees to be supplied as 'selected standard', girth 1m above ground to be 100 - 120mm and overall height to be 3.0-3.5m (approx 2.0m straight stem) to BS.3936 Part 1 1992.

Support using single non reinforced tie 75mm from top of stake.

Remove stake on onset of or during the second growing season after planting.
