

Cancer Centre Refurbishment Design and Access Statement

Royal Berkshire Hospital,
Reading.

The Proposals

This proposal seeks Listed Building Consent for the boring of a hole 300x300mm through the wall that adjoins North Block with the cancer centre extension built in 1998. Also included in the application is the temporary removal of a window, cill and the masonry below the window to create an access door to facilitate the works.

We also attach a full Heritage Report.

Design

The details of the proposal are set out in the attached drawings.

Access

These works do not affect accessibility to the building. The temporary access will allow entry to the building without disturbing the working of the cancer centre. Following completion of the works the removed window, cill and masonry will be restored and the surfaces made good.
