

EnviroSmart

Phase 1 Contaminated Land Assessment

Site address

132 and 134 Oxford Road
Reading
RG1 7NL

Date issued

February 2025

Report status

Final

Grid Reference

470640, 173440

Site Area

0.06 ha

Report prepared for

Chris Broderick

Report reference

84506R1

Risk – Low to Moderate/Low

No immediate action but observe a watching brief during all proposed redevelopment activities and any associated ground works.

Undertake further radon gas assessment / radon measurements.

Executive Summary

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site. GeoSmart are providing consultancy and professional opinion based upon our collation, interpretation and assessment of information contained within an Envirocheck report, and other sources where expressly stated (i.e. site visits, photographs, and anecdotal evidence). It is acknowledged that the risk assessment findings are based on documentary sources of information alone.

Site analysis

1. Probability/likelihood of a contaminant hazard at the Site	High likelihood	
	Likely	
	Low likelihood	
	Unlikely	
2. Potential severity/consequence of any impacts	Severe	
	Medium	
	Mild	
	Minor	
3. Overall land quality risks posed by the Site	Very high	
	High	
	Moderate	
	Moderate/low	
	Low	
	Very low	

Summary of existing and proposed development

The Site is currently occupied by two vacant buildings including lower ground floor levels (no. 132 and 134), with car parking to the front and open areas to the rear. There is an existing shed in the north of no. 134. Development proposals comprise the change of use from commercial to residential, including the alteration of the existing properties to provide 9 one-bedroom apartments (4 apartments at no. 132 and 5 apartments at no. 134) and a new bike shed to the rear of no. 132. It is noted that the lower ground floor within both properties will also be used for living accommodation. It is understood that changes to existing landscaping are not proposed.

Environmental Setting

The underlying superficial geology consists of the Taplow Gravel Member which is classified as a Secondary (A) Aquifer; the bedrock geology consists of the Seaford Chalk Formation and Newhaven Chalk Formation (Undifferentiated) which are classified as a Principal Aquifer.

There are no significant surface water features within 250 m of the Site.

There are no environmentally sensitive land uses within 500 m of the Site.

Site History

The Site was first developed prior to 1879 as two assumed residential properties including private gardens; property no. 134 was extended to the rear during the 1930s. According to historical mapping, property no. 132 was used as a school in the 1970s. The Site was most recently used as offices (currently vacant). Off-Site land uses include residential and commercial land use (including a former nursery and garage services).

Radon

The Site lies in an area where 1 to 3% of homes are at or above the UK radon action level (200 Bq/m³).

Coal Mining

The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues.

Summary of Conceptual Site Model (CSM)

Source of Contamination

Limited potential for inorganic and low volatility organic contaminants to be present within the subsurface soils.
Limited potential for volatile organic contaminants to be present within the subsurface soils.
Limited potential for asbestos containing materials within the subsurface soils.
Limited potential for dissolved phase contaminants to be present within shallow groundwater.
Limited potential for radon within the subsurface.

Receptors

Human Health, Controlled Water (groundwater within the underlying superficial Secondary (A) Aquifer and bedrock Principal Aquifer).

Human Health (pathway)

Dermal contact, ingestion & inhalation of soils & soil dust. Consumption of home grown produce (limited). Ingress into water supply pipework and subsequent water ingestion. Migration of vapours to surface; inhalation indoors. Liberation of sub surface ACMs and inhalation of asbestos fibres. Migration of any sub surface gases into on-Site buildings.

Controlled Waters (pathway)

Dissolution into pore water/shallow groundwater and subsequent migration. Dissolution into aqueous phase and preferential migration via drainage structures.

Preliminary Risk Assessment

Overall, the preliminary risk classification of the Site in relation to the proposed redevelopment is considered to be **Low to Moderate/Low**.

Recommendations / Next Steps

No immediate action but observe a watching brief

It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities and any associated ground works will likely be sufficient.

Undertaken further radon assessment / measurement

Given that the Site lies in an area where 1% to 3% of homes are at or above the UK radon action level (200 Bq/m³) and the fact that the redevelopment plans include basement accommodation, we recommend that further Radon Assessment is undertaken.

Further information can be found at <http://www.ukradon.org/information/>. Additionally, local building control may have further knowledge in relation to radon risks within the area.

1. Introduction

1.1 Background

The study site (from herein known as 'the Site') is situated at 132 and 134 Oxford Road in Reading, RG1 7NL. A location plan of the Site is shown in Section 1.5. A proposed development plan is shown in Section 1.6.

GeoSmart was commissioned by Chris Broderick in February 2025 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested in order to support a proposed planning application for the Site.

The proposed development is for the change of use from commercial to residential, including the alteration of the existing properties to provide 9 one-bedroom apartments (4 at no. 132, 5 at no. 134) and a new bike shed to the rear of no. 132. It is noted that the lower ground floor within both properties will also be used for accommodation. It is understood that changes to existing landscaping are not proposed.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 3.4 for details.

1.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

1.3 Report contents

This report is divided into two sections, as described below:

Section	Content	Purpose
Section 2: LAND QUALITY ASSESSMENT	A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations	To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present
Section 3: SUPPORTING INFORMATION	A collection of site specific information on which the land quality assessment is based	To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments

1.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

1.5 Site location plan

1.6 Proposed Site plan (no. 132)

A horizontal scale bar with alternating black and white segments. It is labeled '0' at the left end and '10 m' at the right end.

136 The Dakota Road, Heading Hill, N.L.

Category	Proposed	Old	Ratio
Capital	1.1	1.0	1.1
Operating	1.1	1.0	1.1
Total	1.1	1.0	1.1

2. Land quality assessment

2.1 Site details

Site name:	132 and 134 Oxford Road	Current land cover:	Mix of hardstanding/building cover (65%) and permeable surfacing (35%)
Current use:	Inactive commercial development (offices)		
Proposed use:	Residential flats	Site area:	0.06 ha

2.2 Conceptual understanding (potential sources of contamination)

 Site history <i>(historical land use taken within 250m radius of the Site boundary)</i>	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LOW LIKELIHOOD PROBABILITY OF CONTAMINATION
		On-Site	Off-Site			
	1879	The Site is split into two plots, each occupied by a single property (assumed residential in nature) situated in the south. The central and northern parts of the Site appear to be occupied by private garden spaces.	Extensive residential development is mapped in the locality of the Site, including dwellings mapped adjacent to the east of the Site and to the south (beyond Oxford Road). The land directly to the north and west appears to be undeveloped. A public house is mapped c. 85 m east.		The land use history suggests that there is the potential for contamination to have occurred <u>on-Site</u> relating to the following: Residential: - Miscellaneous small scale fuel or chemical spills relating to domestic land-uses (i.e., fuels used for garden machinery, herbicides, paints/creosote, detergents, etc.). - Potential for localised/historical deposition of residential waste materials (ash, litter, packaging, etc.). - Made Ground/demolition waste materials associated with any former building works. Commercial (school and offices): - Storage of fuels and/or miscellaneous chemicals. - Miscellaneous small scale fuel and chemical spills. - Made Ground associated with any former development/demolition activities. - Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings. <i>(continued below)</i>	
	1879 - 80 (historical town plan)	No discernible changes on-Site. The dwellings are mapped as 'Campbell Villas'.	No discernible changes off-Site.			
	1883	No discernible changes.				
	1899	No discernible changes on-Site.	A nursery (Victoria Nursery) is mapped adjacent to the west and c. 20 m north.			
	1900	No discernible changes.				
	1901	No discernible changes.				
1912	No discernible changes on-Site.	A tramway is mapped along Oxford Street directly to the south of the Site.				

2.2 Conceptual understanding (potential sources of contamination)

 Site history (historical land use taken within 250m radius of the Site boundary)	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LOW LIKELIHOOD	PROBABILITY OF CONTAMINATION
	On-Site	Off-Site					
	1913 - 14	No discernible changes.			The land use history suggests that there is the potential for contamination to have occurred <u>off-Site</u> relating to the following:		
	1931	The footprint of the dwelling in the southwest of the Site (Nr 134) has been extended towards the north.	A series of suspected lock-up garages have been erected c. 10 m to the north-east.		Nurseries: - Miscellaneous small scale fuel and chemical spills (i.e. fuel used for heating, oils and lubricants, herbicides/pesticides, fertilisers, etc.) - Bulk storage of fuels and/or miscellaneous chemicals.		
	1932 - 33	No discernible changes.			Public houses: - Miscellaneous small scale fuel or chemical spills associated with ad hoc commercial activities / heating oil storage. - Potential for localised/historical deposition of domestic/commercial wastes. - Made Ground associated with former development/demolition activities. - Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.		
	1938	No discernible changes.					
	1948 - 49 (historical aerial photograph)	No discernible changes.					
	1959	No discernible changes on-Site.	Public houses are mapped c. 85 m northwest and c. 90 m east. Several of the greenhouses c. 30 m to the north within the neighbouring nursery are no longer mapped. The tramway is no longer mapped along Oxford Road.				
	1961	No discernible changes.			Tramway: - Fuel/oil/lubricant residues from associated carriages. It is noted that the tramway was cleared over 65 years ago, hence the potential for any significant residual contamination is considered to be low.		
1962	No discernible changes.						

2.2 Conceptual understanding (potential sources of contamination)

 Site history <i>(historical land use taken within 250m radius of the Site boundary)</i>	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description Electricity substation: - Potential for Polychlorinated Biphenyls (PCB) contamination to have occurred. - As the identified electricity substation was constructed before 1980, it is considered possible that PCBs would be present as the use of PCBs ceased in the late 1970s. Engineering works: - Potential for bulk storage of fuels and/or miscellaneous chemicals. - Miscellaneous fuel and chemical spills (i.e., fuels used for heating & powering machinery/vehicles, oils and lubricants, paints/thinners, degreasers, etc.). - Potential for localised deposition of boiler ash/coke and other industrial combustion wastes and by-products. - Made Ground on-Site associated with former development/demolition activities on-Site. - Asbestos containing materials (ACM) may have been incorporated within the on-Site built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings. Unspecified tank: - Miscellaneous fuel and chemical spills.	LOW LIKELIHOOD	PROBABILITY OF CONTAMINATION
	On-Site	Off-Site					
	1971	The property in the southeast (Nr 132) is labelled as a school.	The neighbouring nursery is no longer mapped; a swimming pool is mapped c. 30 m north with associated car parking (including adjacent to the west of the Site). An electricity substation is mapped c. 20 m north, and a tank is mapped c. 15 m north. An undefined building is mapped adjacent to the northeast. The public house c. 85 m east is no longer mapped.				
	1973 - 76	No discernible changes.					
	1977 - 78 (partial map)	No discernible changes on-Site.	An engineering works is mapped c. 45 m south.				
	1979	No discernible changes.					
	1986 (partial map)	No discernible changes on-Site.	The building adjacent to the northeast is mapped as a church. The engineering works c. 45 m south appears to no longer be mapped.				
	1990	No discernible changes.					
	1990 (military map)	No discernible changes.					
	1993	No discernible changes.					
1995	No discernible changes.						

2.2 Conceptual understanding (potential sources of contamination)

 Site history (historical land use taken within 250m radius of the Site boundary)	Date	Description of land use		POTENTIAL SOURCES OF CONTAMINATION	Source description	LOW LIKELIHOOD	PROBABILITY OF CONTAMINATION
	On-Site	Off-Site					
	1999	No discernible changes.			As above.		
	1999 (aerial image)	No discernible changes. Aerial imagery confirms two buildings are located in the south of the Site. The surrounding area is comprised of residential and commercial land.					
	2003 - 05 (aerial image)	No discernible changes.					
	2006	No discernible changes.					
	2006 - 18 (aerial image)	No discernible changes.					
	2020 - 25 (aerial image)	No discernible changes on-Site.	The swimming pool c. 30 m north has been demolished.				
	2024	No discernible changes.					
2025	No discernible changes.						

2.2 Conceptual understanding (potential sources of contamination)

 Current land use	The Site is currently occupied by two detached properties (including lower ground floor levels) most recently used as commercial offices. There are no known buried storage tanks at the Site. There is no known bulk fuel or chemical storage on Site.				The Site's current use is unlikely to have given rise to significant land contamination.	UNLIKELY	
 Neighbouring industrial land uses (see environmental data report in Section 3.3 for full listing)	There are one or more potentially contaminative land uses are located within 250 m of the Site:			POTENTIAL SOURCES OF CONTAMINATION	Despite the presence of potential contaminative activities in the area surrounding the Site, since none occur within close proximity (i.e., within a 50 m radius of the Site) they are unlikely to pose a significant contamination hazard in relation to the Site itself. The local (< 100 m) contemporary trade directory entries include: Autocare (garage services) c. 60 m southwest. Status: inactive. Auto Solutions (garage services) c. 60 m southwest. Status: inactive. S N D (car body repairs) c. 60 m southwest. Status: inactive. Entroform Ltd (printers) c. 65 m southwest. Status: inactive. Ktc Garage (garage services) c. 65 m southwest. Status: inactive. Aztec Printing (printers) c. 70 m southwest. Status: inactive. Local Authority pollution prevention and control sites: Oxford Road Service Station Texaco (fuel filling station) c. 170 m west. Fuel station entries: Parsons Garage c. 135 m west (obsolete). Krisco Reading Service Station (BP fuel station) c. 170 m west (open).	LOW LIKELY-HOOD	PROBABILITY OF CONTAMINATION
	Distance from Site	Number of active industrial land uses	Number of inactive industrial land uses				
	1 - 50 m	0	0				
	51 - 100m	0	6				
	101 - 250 m	3	20				
	Nr	Nearest distance	Land use / permitted activity / authorisation				
	2	135m W	Fuel station entries				
	0	NA	Underground electrical cables				
	0	NA	Control of major accident hazards sites (COMAH)				
	0	NA	Notification of installations handling hazardous substances (NIHHS)				
	0	NA	Explosives sites				
	0	NA	Planning hazardous substance consents				
	0	NA	Planning hazardous substance enforcements				
	1	250m NW	Sites determined as Contaminated Land under Part IIA of the Environmental Protection Act 1990				
	0	NA	Records of Licensed Discharge Consents.				
	0	NA	Integrated pollution prevention and control sites				
	1	170m W	Local Authority pollution prevention and control sites				
	0	NA	Local Authority pollution prevention and control enforcements				
	0	NA	Records of Category 3 or 4 Radioactive Substance Licences				

2.2 Conceptual understanding (potential sources of contamination)

 EA recorded pollution incidents <i>(see environmental data report in Section 3.3 for full listing)</i>	No Environment Agency pollution incidents have been recorded within 250 m of the Site.	POTENTIAL SOURCES OF CONTAMINATION	No potential for gross contamination has been identified in relation to any pollution incidents occurring near to the Site.	NEGLIGIBLE	PROBABILITY OF CONTAMINATION
 Landfills / waste sites <i>(taken within 500m radius of the Site boundary, see environmental data report in Section 3.3 for full listing)</i>	There are no BGS recorded landfills located within 500 m of the Site. There are no Environment Agency listed historical landfills located within 500 m of the Site. There are no registered landfills located within 500 m of the Site. There are no Local Authority listed historical landfills located within 500 m of the Site. The following other waste sites are registered within 250 m of the Site: 0 Records of registered waste transfer sites. 0 Records of registered waste treatment or disposal sites. 0 Records of licenced waste management facilities.		Given the absence of any historical or operational landfills within close proximity of the Site no associated contamination hazards have been identified. Given the absence of any waste treatment, transfer or disposal sites within close proximity of the Site no associated contamination hazards have been identified.	NEGLIGIBLE	

2.2 Conceptual understanding (potential sources of contamination)

Rn Radon (see environmental data report in Section 3.3 for full listing)	According to current UK radon mapping the Site lies in an area where 1 to 3% of homes are at or above the UK radon action level (200 Bq/m3).	POTENTIAL SOURCES OF CONTAMINATION	1 to 3% of homes are at or above the UK radon action level (200 Bq/m3).	LOW LIKELIHOOD	PROBABILITY OF CONTAMINATION
---	---	---	--	-----------------------	-------------------------------------

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Geology and Groundwater <i>(see the environmental data report in Section 3.3 for full details)</i>	British Geological Survey mapping indicates that the underlying superficial geology consists of the Taplow Gravel Member (TPGR) which comprises of sand and gravel and is classified as a Secondary (A) Aquifer. British Geological Survey mapping indicates that the bedrock geology consists of the Seaford Chalk Formation and Newhaven Chalk Formation (Undifferentiated) (SNCK) which comprise of chalk and are classified as a Principal Aquifer. According to the GeoSmart Groundwater Flood Risk (GW5) Map (GeoSmart, 2024). The risk of groundwater flooding at the Site is 'high'. A separate Flood Risk Assessment has been carried out by GeoSmart (ref: 84506.01). The Site does not lie within a groundwater Source Protection Zone (SPZ). There are no groundwater abstraction licences within 500 m of the Site.	POTENTIAL RECEPTORS A Secondary (A) Aquifer comprises permeable layers capable of supporting water supply at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. A Principal Aquifer comprises rock or drift deposits that have high permeability - meaning they usually provide a high level of water storage. They may support strategic water supply and/or river base flow. Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment should be considered for the Site. The depth to groundwater beneath the Site is unknown. The absence of any groundwater abstractions does not necessarily indicate a low resource potential. Small scale abstractions, such as for private water supplies, may not be listed.	SEVERE POTENTIAL SEVERITY OF IMPACT
--	---	--	---

Superficial Geology (BGS, 2025)

Bedrock Geology (BGS, 2025)

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Geohazards <i>(see the environmental data report in Section 3.3 for full details)</i>	The Site does not lie within a 'Coal Mining Reporting Area'. There are no brine affected areas within 75 m of the Site. The following mining instabilities are located within 500 m of the Site: No or limited artificial ground / Made Ground is anticipated on Site. There are no natural hazards (with a hazard rating of moderate or above) at or within 50 m of the Site.	POTENTIAL RECEPTORS	The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues. The Site does not lie within an area of former brine working and is therefore unlikely to be affected by related ground stability issues. Conclusive rock mining in the southwest of the Site. BGS GeoIndex Onshore mapping does not have any artificial deposits recorded at the Site.	MILD	POTENTIAL SEVERITY OF IMPACT
---	---	-----------------------------------	--	--------------------	--

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Surface water <i>(see the environmental data report in Section 3.3 for full details)</i>	There are no significant surface water features within 250 m of the Site. The Site lies within a Flood Zone 1 (low probability). There are no surface water abstraction licences within 500 m of the Site.	POTENTIAL RECEPTORS	No relevant surface water receptors have been identified.	NEGLECTIBLE	POTENTIAL SEVERITY OF IMPACT
 Environmental designations <i>(see the environmental data report in Section 3.3 for full details)</i>	There are no environmentally sensitive land uses within 500 m of the Site.		No relevant environmentally designated sites/receptors have been identified.	NEGLECTIBLE	
 Human receptors	Proposed residents/users of the Site.		Human receptors are proposed to be present on Site.	SEVERE	

2.4 Regulator perspective

Consultation date	20th February 2025	Reading Borough Council
GeoSmart consultant	Emilia Dončić	Justine Davies
Consultation outcome	The local authority replied to a consultation request by GeoSmart. The Council declined to answer any queries relating to the Site other than through formal chargeable consultation.	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
On-Site sources (former residences, school, offices)								
1	Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	The risk classifications reflect the likely absence of any significant sources of contamination (based on the known land use history).
2		Consumption of home grown produce	HH		MEDIUM	UNLIKELY	LOW RISK	
3		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	UNLIKELY	LOW RISK	
4		Building materials in direct contact with aggressive ground	PROP	Site buildings	MEDIUM	UNLIKELY	LOW RISK	Aggressive ground conditions are not anticipated to be present. It is noted that no construction works are proposed on-Site.
5		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Taplow Gravel Member (a Secondary (A) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	The risk classifications reflect the likely absence of any significant sources of inorganic or low volatility organic contaminants (based on the known land use history). It is noted that there are no licensed abstractions or mapped SPZs within the local area.
6		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Seaford Chalk Formation and Newhaven Chalk Formation (Undifferentiated) (a Principal Aquifer)	MEDIUM	UNLIKELY	LOW RISK	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
7	Potential for volatile organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	The risk classifications reflect the likely absence of any significant sources of contamination (based on the known land use history).
8		Consumption of home grown produce	HH		MEDIUM	UNLIKELY	LOW RISK	
9		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	UNLIKELY	LOW RISK	
10		Migration of vapours to surface; inhalation indoors	HH		MEDIUM	UNLIKELY	LOW RISK	Given the known history of the Site, it is considered unlikely that there will be a significant source of VOC contamination beneath the Site.
11		Migration of vapours to surface; inhalation outdoors	HH		MEDIUM	UNLIKELY	LOW RISK	
12		Building materials in direct contact with aggressive ground	PROP	Site buildings	MEDIUM	UNLIKELY	LOW RISK	Aggressive ground conditions are not anticipated to be present. It is noted that no construction works are proposed on-Site.
13		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Taplow Gravel Member (a Secondary (A) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	The risk classifications reflect the likely absence of any significant sources of organic contaminants (based on the known land use history). It is noted that there are no licensed abstractions or mapped SPZs within the local area.
14		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Seaford Chalk Formation and Newhaven Chalk Formation (Undifferentiated) (a Principal Aquifer)	MEDIUM	UNLIKELY	LOW RISK	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
15	Potential for asbestos containing materials within the subsurface soils	Liberation of sub surface ACMs and inhalation of asbestos fibres	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	The risk classification reflects the likely absence of any widespread ACMs within the sub surface (based on the known land use history).
16	Potential for dissolved phase contaminants to be present within shallow groundwater	Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Taplow Gravel Member (a Secondary (A) Aquifer)	MEDIUM	UNLIKELY	LOW RISK	The risk classification reflects the likely absence of any significant sources of dissolved contamination
17		Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Seaford Chalk Formation and Newhaven Chalk Formation (Undifferentiated) (a Principal Aquifer)	MEDIUM	UNLIKELY	LOW RISK	
18	Potential for elevated methane to be present within the sub-surface soils	Lateral and vertical migration into on-Site buildings; potential to cause an explosion	HH	On-Site properties and their occupants	SEVERE	UNLIKELY	MODERATE/LOW RISK	Based on the prevailing conceptual understanding an appreciable gas source is considered unlikely. It is acknowledged that both on-Site structures have a lower ground floor / basement level. The landfill gas risk classifications are a reflection of the severity of consequences rather than the likelihood of occurrence.
19		Lateral migration towards off-Site buildings; potential to cause an explosion	HH	Off-Site properties and their occupants	SEVERE	UNLIKELY	MODERATE/LOW RISK	
20	Potential for elevated carbon dioxide to be present within the subsurface soils	Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation	HH	Occupants of on-Site buildings	SEVERE	UNLIKELY	MODERATE/LOW RISK	
21		Lateral migration towards off-Site buildings; potential to cause asphyxiation	HH	Occupants of off-Site buildings	SEVERE	UNLIKELY	MODERATE/LOW RISK	
22	Potential for radon within the subsurface	Lateral migration towards on-Site buildings; potential to cause long term health effects	HH	Occupants of on-Site buildings	MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	
OVERALL RISK RATING (on-Site)							LOW RISK	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
Off-Site sources: - former nursery adjacent to the Site - tank c. 15 m north - former engineering works c. 45m south - commercial land including inactive garage services c. 60 m southwest and public house c. 85 m northwest								
23	Potential for both inorganic and volatile organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	Various commercial and industrial activities have been identified within 100 m of the Site on historical mapping, including a nursery and tank on the adjacent land, which may have given rise to some localised ground contamination. It is noted that the neighbouring nursery was cleared in the early 1970s, which suggests that any associated VOCs may have largely dissipated. The nature of the nearby tank (which was installed prior to 1971) is uncertain. The potential vapour risks reflect the presence of a lower ground floor / basement space which may include sleeping accommodation.
24		Consumption of home grown produce	HH		MEDIUM	UNLIKELY	LOW RISK	
25		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	UNLIKELY	LOW RISK	
26		Migration of vapours to surface; inhalation indoors	HH		MEDIUM	LOW LIKELIHOOD	MODERATE/LOW RISK	
27		Migration of vapours to surface; inhalation outdoors	HH		MEDIUM	UNLIKELY	LOW RISK	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
Off-Site sources: - electricity substation c. 20 m north								
28	Potential contaminant: polychlorinated biphenyls (PCBs)	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	MEDIUM	UNLIKELY	LOW RISK	Given that the identified electricity sub station was constructed prior to 1971, PCB contaminants could potentially be present within the local subsoils. The risks posed by any localised contamination are however likely to be constrained by the off-Site position of the sub station (c. 20 m from the Site boundary), the small scale of the sub station, and the relatively low mobility of PCB contaminants.
29		Consumption of home grown produce	HH		MEDIUM	UNLIKELY	LOW RISK	
30		Ingress into water supply pipework and subsequent water ingestion	HH		MEDIUM	UNLIKELY	LOW RISK	
31		Migration of vapours to surface; inhalation indoors	HH		MEDIUM	UNLIKELY	LOW RISK	
32		Migration of vapours to surface; inhalation outdoors	HH		MEDIUM	UNLIKELY	LOW RISK	
	OVERALL RISK RATING (off-Site)						LOW to MODERATE/LOW RISK	

2.6 Next Steps

	No immediate action but observe a watching brief		Given the known history of the Site it is considered unlikely that significant contamination is present within the sub-surface. The preliminary risk assessment suggests that the risks posed by in situ land quality are therefore likely to be low to moderate/low. It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities and any associated ground works will likely be sufficient. The watching brief should be maintained throughout the entire development phase of works and any possible evidence of contamination encountered during the redevelopment works should be alerted to the Local Authority. Appropriate actions would then be required to further inspect, sample and analyse any suspect materials, and formulate an appropriate remediation plan, as necessary.
---	--	---	--

2.7 Other recommendations

✓	Undertaken further radon assessment / measurement		Given that the Site lies in an area where 1% to 3% of homes are at or above the UK radon action level (200 Bq/m³) and the fact that the development plans include basement accommodation, we recommend that further Radon Assessment is undertaken. Further information can be found at http://www.ukradon.org/information/ Additionally local building control may have further knowledge in relation to radon risks within the area.
---	--	---	--

3. Supporting Information

The following supporting information is contained in this section:

Section	Content
3.1	Referenced materials used in the EnviroSmart reporting
3.2	Site photographs
3.3	Published environmental data records (Landmark Envirocheck report 132 and 134 Oxford Road, Reading, RG1 7NL. REF: 370353340_1_1) including: • Aerial photographs and site map • Environmental permits, incidents and registers • Landfill and other waste sites • Current land use information • Geology • Hydrogeology and hydrology • Flooding • Designated environmentally sensitive sites • Other environmental factors
3.4	Risk assessment methodology
3.5	Historical land use maps

Disclaimer

This report has been prepared by GeoSmart in its professional capacity as soil and water specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by GeoSmart solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to GeoSmart at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, GeoSmart may, by prior written agreement, agree to such release, provided that it is acknowledged that GeoSmart accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. GeoSmart accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against GeoSmart except as expressly agreed with GeoSmart in writing.

Important consumer protection information

This search has been produced by GeoSmart Information Limited, Suite 9-11, 1st Floor, Old Bank Buildings, Bellstone, Shrewsbury, SY1 1HU.

Tel: 01743 298100

Email: info@geosmartinfo.co.uk

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code

- provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
- sets out minimum standards which firms compiling and selling search reports have to meet
- promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals
- enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.

By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award up to £5,000 to you if the Ombudsman finds that you have suffered actual financial loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the Code.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs contact details:

The Property Ombudsman scheme

Milford House

43-55 Milford Street

Salisbury

Wiltshire SP1 2BP

Tel: 01722 333306

Fax: 01722 332296

Email: admin@tpos.co.uk

You can get more information about the PCCB from www.propertycodes.org.uk

Please ask your search provider if you would like a copy of the search code

Complaints procedure

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly. If you want to make a complaint, we will:

- Acknowledge it within 5 working days of receipt.
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
- Provide a final response, in writing, at the latest within 40 working days of receipt.
- Liaise, at your request, with anyone acting formally on your behalf.

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs): Tel: 01722 333306, E-mail: admin@tpos.co.uk.

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision. Complaints should be sent to:

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

3.4 Risk assessment methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

Classification	Definition
High likelihood	There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term.
Low likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.

Table B: Classification of consequence

Classification	Receptor	Definition	Examples
Severe	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance	High concentrations of cyanide on the surface of an informal recreation area
	Controlled waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource	Major spillage of contaminants from site into controlled water
	Property	Catastrophic damage to buildings/property	Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied)
	Ecology	A short-term risk to a particular ecosystem, or organism forming part of such eco-system	Potentially long term derogation of a designated site or protected species
Medium	Humans	Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)	Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria
	Controlled waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)	Leaching of contaminants from a site to a principal or secondary aquifer
	Property	Significant damage to crops, buildings, structures and services	Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability)
	Ecology	A significant change in a particular ecosystem	Death of a species within a designated nature reserve

Table B: Classification of consequence (continued)

Classification	Receptor	Definition	Examples
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk	Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria
	Controlled waters	Pollution of non-water resources	Pollution of non-classified groundwater
	Property	Damage to sensitive buildings/structures/services	Aggressive ground conditions leading to potential for long term degradation of buried concrete
	Ecology	Damage to the environment	Localised damage to aquatic habitat causing temporary relocation of certain species
Minor	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc.)	The presence of contaminants at such concentrations that protective equipment is required during site works
	Controlled waters	Potential minor release of contamination to local water features	Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality
	Property	Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve	The loss of plants in a landscaping scheme. Discolouration of concrete
	Ecology	Short term, localised damage may occur; consequences are spatially and temporally limited	Short term or localised disruption to in situ flora or fauna; no lasting effects

Table C: Risk classification (comparison of consequence and probability)

		Consequence (severity)			
		Severe	Medium	Mild	Minor
Probability	High likelihood	Very high risk	High risk	Moderate risk	Low risk
	Likely	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

Risk Key

Very High	High	Moderate	Moderate/Low	Low	Very Low
There is a high probability that severe harm could arise to a designated receptor from an identified hazard without appropriate remediation action	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action	It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely any harm would be mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild	The presence of an identified hazard does not give rise to the potential to cause harm to a receptor

3.5 Historical land use maps

Historical Ordnance Survey maps relating to the site and its surrounding area have been provided by Landmark.

Oxfordshire

Published 1882

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

Published 1948 - 1949

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was rechecked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Reading

Published 1990

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2024

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Berkshire

Published 1879

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1986 - 1993

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

© Crown copyright and Landmark Information Group Limited 2025. All Rights Reserved.

Berkshire

Published 1879 - 1880

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.
