Executive Summary

TRC Companies Limited (TRC) was commissioned by Arrow Planning on behalf of A F Jones Stonemasons (the 'Client') to undertake a Tier 1 Desk Based Geoenvironmental and Geotechnical Site Assessment at A F Jones Stonemasons, 33 Bedford Road, Reading, RG1 7EX (hereafter referred to as the 'Site').

This Executive Summary is part of the complete report; and findings, opinions or conclusions in this Executive Summary are made in context with the complete report. TRC recommends that the user reads the entire report for all supporting information related to findings opinions and conclusions.

Executive Summary	
Site Details	
Client	A F Jones Stonemasons
Site Address & Grid Reference	A F Jones Stonemasons, 33 Bedford Road, Reading, RG1 7EX Easting 470680, Northing 173550
Site Area	0.04 ha
Proposed Development	The proposed development will comprise the conversion / refurbishment of the existing building from an office to a residential property.
Site Setting	
Current Site Use	The Site currently comprises offices and a car park for A F Jones Stonemasons.
Site History	Earliest available mapping (1879-1880) shows that the Site was already developed and appeared to comprise a terraced building (likely residential). The Site largely remained the same until sometime between the 1960s and early 1970s, where the Site appears in its current configuration with either the demolition of some buildings and construction of new buildings / structures, or extensions or the existing buildings. It is not known when it became A F Jones Stonemasons.
Expected Geology	Made Ground – Expected associated with previous developments. Superficial deposits – Taplow Gravel Member Bedrock geology – Seaford Chalk and New Haven Chalk Formation (White Chalk Subgroup)
Expected Hydrogeology	Superficial deposits –Secondary (A) Aquifer, Bedrock geology - Principal Aquifer The Site does not lie within a groundwater source protection zone. Groundwater is therefore considered to be sensitive to contamination. There is potential for groundwater flooding to occur at ground surface.

Executive Summary	
Expected Hydrology	The nearest surface water feature is 228 northwest of the Site. It is shown in the Landmark Envirocheck report; however, aerial mapping does not show the surface water feature, therefore it might be culverted. There is potential for the surface water to be in hydraulic continuity with groundwater beneath the Site. Surface water is therefore considered to be moderately sensitive to contamination. The Site is located within Flood Zone 1. he long-term yearly chances of flooding for the Site are very low for surface water and rivers and the sea flooding, with groundwater and reservoir flooding unlikely in this area.
Mining	The Site is not in an area affected by coal mining. The Site is not in an area affected by any other mining activity.
Radon	BGS records indicate that the Site is in a lower probability radon area where between 1-3% of homes are estimated to be at or above the Action Level. On this basis, the BGS states that…"no radon protective measures are necessary in the construction of new dwellings or extensions".
Unexploded Ordnance Risk Assessment	The Site is not in an area affected by historical UXO risk.
Environmental Assessment	
Initial Conceptual Site Model	On Site: The potential Made Ground from previous phases of development at the Site could be a source of asbestos fibres in soil, heavy metals, polycyclic aromatic hydrocarbons (PAH), total petroleum hydrocarbons (TPH) and ground gases. Off Site: The Made Ground from previous phases of development, electricity substation and tank are a potential source of asbestos fibres in soil, heavy metals, PAH, TPH, polychlorinated biphenyls (PCB) and ground gases. Potentially complete contaminant linkages have been identified and are considered to pose a potential risk to the identified receptors.
Geotechnical Assessment	
Geotechnical Hazards	The following potential geotechnical hazards have been identified: • Made Ground expected to depths of approximately 1m bgl; • Buried obstructions, such as old foundations, cobbles in Made Ground, Taplow Gravel Member and White Chalk Subgroup; • Ground conditions aggressive to buried concrete; • The anticipated volume change potential (shrink-swell capacity) of soils; • Shallow groundwater level; • Settlement prone soils, such firm clays; • Running sands; • Dissolution features in Chalk; • Need for Environment Agency consultation and approvals; and, • Party Walls.

Executive Summary	

Summary and Conclusions

Based on this assessment it is considered that the former land uses could potentially/ impact the underlying soil and groundwater conditions.

A number of potential geotechnical hazards are anticipated associated with the proposed development.

Recommendations

Based on the proposed development comprising conversion / refurbishment of the existing office buildings into a residential building, it is considered that no further works including an intrusive investigation is required.

Should there be any change to the proposed plans including redevelopment of the Site, then a Tier 2 intrusive investigation is undertaken to further appraise underlying soil and groundwater quality and assess ground gas conditions. The Tier 2 ground investigation should include geotechnical testing to confirm the underlying geology, groundwater regime and engineering properties of the underlying soils. The ground investigation should be designed and assessed based on the requirements of BS5930:2015, Eurocode 7 Part 2 (and the associated National Annex), and NHBC Standards. The investigation and assessment should be tailored to ensure that the geotechnical hazards, discussed in this report are addressed and appropriate mitigation measures are proposed to inform the structural and civil engineering design. A Geotechnical Design Report may need to be prepared at a later stage in accordance with Eurocode 7, once the Tier 2 ground investigation and assessment have been completed and the final scheme details are known.

1.0 Introduction

1.1 Appointment and Purpose

TRC Companies Limited (TRC) was commissioned by A F Jones Stonemasons (the 'Client') to undertake a Tier 1 Desk Based Geoenvironmental and Geotechnical Site Assessment at A F Jones Stonemasons, 33 Bedford Road, Reading, RG1 7EX (hereafter referred to as the 'Site').

A Site location plan is presented as Figure 1 in Annex A.

This report has been prepared in accordance with TRC's proposal dated 4th October 2024 and the respective terms and conditions contained therein.

This Tier 1 report has been commissioned to assess environmental and geotechnical considerations, predominantly with respect to ground conditions at the Site, which will be used to support a future planning application.

1.2 Proposed Development

The proposed development will comprise the conversion / refurbishment of the existing building from an office to a residential property.

Based on the above and the anticipated Site-specific ground conditions presented in this report, the proposed development is considered to fall into geotechnical category 1 with respect to BS EN 1997 (Eurocode 7).

The end user sensitivity is considered to be "high" for the proposed residential end use.

1.3 Available Information and Standards

This Tier 1 report presents the findings of a desk study based on the following information:

- Historical uses of the Site and surroundings;
- Current use and condition of the Site;
- Environmental setting in terms of geology, hydrogeology, hydrology and surrounding land uses, based on publicly available environmental records;
- A Landmark Envirocheck Report (Annex B); and,

This Tier 1 report has been conducted with due regard to the following guidance:

- The National Planning Policy Framework;
- BS5930:2015 (+A1:2020) Code of Practice for Ground Investigations;
- BS EN 1997 Eurocode 7;
- BS10175:2011 (+A2:2017) Investigation of Potentially Contaminated Sites – Code of Practice; and,
- Land Contamination Risk Management (LCRM) 2020 (2023 update).
- NHBC Standards

1.4 Significant Assumptions

This report presents TRC's observations, findings, and conclusions as they existed on the date that this report was issued. This report is subject to modification if TRC becomes aware of additional information after the date of issue of this report that is material to its findings and conclusions.

The reliability of information provided by others to TRC cannot be guaranteed to be accurate or complete. Performance of this Tier 1 report is intended to reduce, but not eliminate, uncertainty of geo-environmental and geotechnical conditions associated with the Site; therefore, the findings and conclusions made in this

report should not be construed to warrant or guarantee the Site, or express or imply, including without limitation, warranties as to its marketability for a particular use. TRC found no reason to question the validity of information received unless explicitly noted elsewhere in this report.

1.5 User Reliance

This report was prepared for A F Jones Stonemasons. Reliance on the report by any other third party is subject to requesting and fully executing a reliance letter between TRC and the third party that acknowledges the TRC Standard Terms and Conditions with the Client, to the same extent as if they were the Client thereunder.

TRC has been provided with information from third parties for information purposes only and without representation or warranty, express or implied as to its accuracy or completeness and without any liability on such third parties part to revise or update the information. Where reliance has been provided by third parties to potential purchasers this is noted in our report.

2.0 Site Location and Description

2.1 Site Location

The Site comprises an approximate 0.04 ha plot of land located at A F Jones Stonemasons, 33 Bedford Road, Reading, RG1 7EX, centred on National Grid Reference Easting 470685, Northing 173552, situated approximately 870m southwest from Reading Railway Station.

The site location is presented as Figure 1 in Annex A.

2.2 Site Description

2.2.1 General

A site walkover has not been undertaken prior to the preparation of this report. Aerial photography from Google Earth has been used to infer the condition of the Site.
The Site currently comprises offices and a car park for A F Jones Stonemasons.

2.1 Surrounding Area

The Site is located within an area of predominantly residential land use. Land uses in the immediate vicinity include the following principal features:

Table 2.1: Summary of Surrounding Land Use

Direction	Land Use
North	Terraced residential dwellings of Bedford Road
East	Bedford Road with residential dwellings beyond
South	Battle Street with a large vacant plot of land and residential dwellings beyond
West	Terraced residential dwellings of Battle Street

2.4 Summary

TRC has noted the following potential sources of contamination when reviewing available satellite imagery

- Anticipated presence of Made Ground due to past developments.

3.0 Previous Assessment, Investigations or Remediation

TRC is not aware of any previous assessments or reports undertaken for the Site.

4.0 Review of Site Data

4.1 Environmental Setting

The environmental setting of the Site can influence the susceptibility to, and relative magnitude of, environmental and geotechnical impacts and liabilities associated with on and off-site sources of contamination and geotechnical hazards.

The following sections present a summary of environmental and geotechnical reviews conducted on available records.

4.1.1 Geology

The following information has been reviewed:

- The British Geological Survey (BGS) geological map, scale 1:50,000, sheet number 268, Reading, 2000;
- The BGS website;
- The BGS historical boreholes with reference no. SU77SW809, SU77SW1104 and SU77SW1092 and,
- The Landmark Envirocheck Report (Annex B).

Based on the above information, the Site is underlain by: variable thickness of Made Ground, sandy gravel, over Chalk at depth.

The anticipated site geology is summarised in Table 4.1.

Table 4.1: Summary of Anticipated Geology

Strata	Depth to Base (m bgl)	Depth to Base (m aOD)*	Thickness (m)	Typical Description
Made Ground	1.0	40.6	1.0	Heterogeneous mix of sandy, gravelly clay with brick fragments, flint, mudstone, limestone and concrete obstructions.
Taplow Gravel Member	4.0	37.6	3.0	Sandy gravels, recorded as firm sandy clay in proximity to site in historical BGS boreholes.
Seaford Chalk and New Haven Chalk Formation (White Chalk)	>50	<-8.4	>46.0	Chalk with flints. With discrete marl seams, nodular chalk, sponge-rich and flint seams throughout. Typology of flints and incidence of marl seams is important for correlation.

** Assuming a ground level of 41.6 metres Above Ordnance Datum (m aOD) across the Site*

4.1.2 Mining

The Landmark Envirocheck indicates that the Site is not within an area that may be affected by coal mining. The Site is not in an area affected by any other mining activity.

4.1.3 Radon

BGS records indicate that the Site is in a lower probability radon area where between 1-3% of homes are estimated to be at or above the Action Level. On this basis, the BGS states that…"no radon protective measures are necessary in the construction of new dwellings or extensions".

4.1.4 Seismicity

The national foreword to BS EN 1998-1:2004+A1:2013 'Eurocode 8: Design of Structures for Earthquake Resistance – Part 1' states that there are no requirements in the UK to consider seismic loading, and the whole of the UK may be considered an area of very low seismicity in which the provisions of EN 1998 need not apply.

4.1.5 Hydrogeology

British Geological Survey (BGS) geological mapping and hydrogeological mapping presented by DEFRA (MAGIC website) indicate the following hydrogeological information for the Site:

Table 4.2: Summary of Hydrogeology

Geology	Geological Description	Aquifer Status	Aquifer Description
Superficial Deposits: Taplow Gravel Member	Sand and gravel, locally with lenses of silt or clay.	Secondary (A) Aquifer	Permeable strata capable of supporting water supplies at a local rather than strategic scale and in some cases forming an important source of base flow to rivers, lakes or wetlands.
Bedrock Geology: Seaford Chalk and New Haven Chalk Formation (White Chalk)	Chalk with flints. With discrete marl seams, nodular chalk, sponge-rich and flint seams throughout.	Principal Aquifer	Geological strata that exhibit high intergranular and/or fracture permeability. They usually provide a high level of water storage and can support water supply and/or base flow to rivers, lakes and wetlands on a strategic scale.

The Site does not lie within a groundwater source protection zone (SPZ).

The nearest active groundwater abstraction is 444m north of the Site and is for process water from metal abstraction.

The underlying aquifers are unconfined.

The Landmark Envirocheck report indicates potential for groundwater flooding to occur at ground surface.

4.1.6 Hydrology

The nearest surface water feature is 228 northwest of the Site. It is shown in the Landmark Envirocheck report; however, aerial mapping does not show the surface water feature, therefore it might be culverted.

There is potential for the surface water to be in hydraulic continuity with groundwater beneath the Site.

The nearest surface water abstraction is located 973m southeast of the Site and is for lake and pond throughflow.

The Site does not lie within Flood Zone 1 (low probability of flooding from rivers or the sea). The long-term yearly chances of flooding for the Site are very low for surface water and rivers and the sea flooding, with groundwater and reservoir flooding unlikely in this area.

4.1.7 Sensitive Land Uses

The Site is located in a Nitrate Vulnerable Zone (NVZ), named Thames Wallingford to Caversham Nvz, however there are no other sensitive land uses with 2km of the Site.

4.1.8 Summary of Site Sensitivity

The Site is considered to be of "moderate to high" environmental sensitivity, based on the following key factors:

- The published geology indicates that the Site is underlain by Made Ground over Taplow Gravel Member over White Chalk.
- The superficial geology is classified as Secondary A aquifer and the bedrock geology is classified as a Principal Aquifer.
- The Site is not within a Source Protection Zone and there are none within a 2km radius of the Site.
- The Site is within a NVZ.
- There is one surface water feature 228m northwest of Site.
- Residential end use for the Site.

4.2 Environmental Regulatory Database Review

The following environmental data have been obtained from a Landmark Envirocheck Report (Annex B), which includes a search of databases held by regulatory bodies including the EA, BGS, the Department for the Environment, Food and Rural Affairs (DEFRA), City, District and Borough Councils and County Councils.

The table below summarises key features identified on-site and within the 500m search radius.

Table 4.3: Summary of Environmental Regulatory Database Review

Database	On-Site	0-500m	Description
Agency and Hydrological			
Contaminated Land Register Entries and Notices	0	1	186m northwest: George Street Allotments, remediation statement
Discharge Consents	0	6	Companies include: Network Rail Infrastructure, Jarvis Facilities Ltd, Reading Transport Ltd and Thames Water Utilities
Local Authority Pollution Prevention and Controls	0	2	Hobbs of Reading and Oxford Road Service Station for pollution prevention and air pollution control
Substantiated Pollution Incident Register	0	1	231m north: 23rd July 2007, unknown oils in Thames Region resulted in significant incident for Land Impact.
Waste			
Historical Landfill Sites	0	2	Cow Lane, last input date was 31st December 1959 and the Site was operational for 9 years.
Licensed Waste Management Facilities	0	1	271m west: E G W Carter 271m from Site recycling mixed metals authorised by EA.
Local Authority Landfill Coverage	1	0	Reading Unitary Council has supplied landfill data on Site.
Potentially Infilled Land (Non-Water)	0	1	469m northwest: Unknown filled ground (pit, quarry).
Potentially Infilled Land (Water)	0	1	281m northwest: Unknown filled ground (pond, marsh, river, stream, etc.).
Industrial Land Use			
Contemporary Trade Directory Entries	0	95	Variety of companies within 500m of Site, mostly sites are inactive. Active entries include a stained glass designer and producer, domestic cleaning services, garage services, petrol filling services and window frame manufacturers.

Database	On-Site	0-500m	Description
Fuel Station Entries	0	3	2 obsolete petrol stations and Krisco Reading Service Station has a BP garage 224m southwest of the Site.
Points of Interest – Commercial Services	0	39	Mostly repair and servicing of vehicles, a few recycling services that recycle scrap metals.
Points of Interest – Manufacturing and Production	0	17	Tanks or works mostly generic or unspecified works.
Points of Interest – Public Infrastructure	0	16	Mostly transport infrastructure, bus stations and petrol and fuel stations.
Points of Interest – Recreational and Environmental	0	2	Recreational playgrounds.

The Landmark Envirocheck report indicates very low or no hazard for collapsible ground, compressible ground, ground dissolution, landslides, running sands, shrinking and swelling of clay for the Site.

Also, based on the Landmark Envirocheck report non-coal mining. were identified within 49m of the Site, it is stated to be highly unlikely that this will cause any risk.

4.3 History of the Site and the Surrounding Area

The history of development on the Site and immediate surrounding area was investigated with reference to historical Ordnance Survey (OS) mapping and aerial photographs. The findings are presented in subsequent sections below.

4.3.1 Historical Mapping

A summary of the development history of the Site and immediate surrounding area obtained from historical OS mapping and aerial photographs (Annex B) is detailed in the table below.

Table 4.4: Summary of Historical Mapping

Edition and Scale	On-Site Activities	Off-Site Activities (within ~ 250m)
1879-1880 (1:500)	The Site appears to comprise a terrace style building on the eastern part of the site and another building in the western part. There also appears to be a very small structure close to the centre of the Site.	The surrounding areas of the Site comprise rows of terraced buildings (likely houses).
1883 (1:10,560)	No significant changes to the Site.	There appears to be a dairy located approximately 100m west of the Site. There are several branches of a railway line located approximately 250m west and 250m north of the Site.
1899 (1:2,500)	There appears to be another building adjacent to the southern boundary of the Site.	The dairy is no longer present and appears to be replaced with terraced buildings. There is a nursery (Victoria Nursery), located less then 50m south of the Site.
1912 (1:2,500)	No significant changes to the Site.	No significant changes to the surrounding area.

Edition and Scale	On-Site Activities	Off-Site Activities (within ~ 250m)
1913-1914 (1:10,560)	No significant changes to the Site.	No significant changes to the surrounding area.
1931 (1:2,500)	No significant changes to the Site.	No significant changes to the surrounding area.
1932-1933 (1:10,560)	No significant changes to the Site.	No significant changes to the surrounding area.
1938 (1:10,560)	No significant changes to the Site.	No significant changes to the surrounding area.
1948-1949 (1:10,560) Aerial Photography	No significant changes to the Site.	No significant changes to the surrounding area.
1957-1959 (1:1,250)	No significant changes to the Site.	Victoria Nursery is now renamed as Bedford Nursery.
1961 (1:2,500)	No significant changes to the Site.	No significant changes to the surrounding area.
1962-1971 (1:1,250)	The Site appears to be in its current configuration, with either the demolition of the buildings in the south and west and construction of a larger building / structure, or extensions of the existing buildings.	Bedford Nursery has now been replaced with Central Swimming Pool. There appears to be an electricity substation and tank directly south of the pool.
1973-1976 (1:10,000)	No significant changes to the Site.	No significant changes to the surrounding area.
1977-1988 (1:1,250)	No significant changes to the Site.	No significant changes to the surrounding area.
1986-1993 (1:1,250) Partial mapping	No significant changes to the Site.	No significant changes to the surrounding area.
1993 (1:1,250)	No significant changes to the Site.	No significant changes to the surrounding area.
1999 (1:1,250)	No significant changes to the Site.	No significant changes to the surrounding area.
2006 (1:10,000)	No significant changes to the Site.	No significant changes to the surrounding area.
2024 (1:10,000)	No significant changes to the Site.	The Central Swimming Pool appears to have been demolished.

4.3.2 Summary of the History of the Site and Surrounding Area

Based on the information obtained by TRC, the history of the Site and surrounding area can be summarised as follows:

- Earliest mapping shows that the Site was already developed and appeared to be a terraced property (likely residential). The Site largely remained the same until sometime between the 1960s and early 1970s, where the Site appears in its current configuration with either the demolition of some buildings and construction of new buildings / structures, or extensions or the existing buildings. It is not known when it became A F Jones Stonemasons.
- The surrounding area has largely comprised residential properties, with a dairy formerly located approximately 100m west of the Site in the 1880s until the 1890s. There are several branches of a railway line approximately 250m west and north of the Site. Historically there was a nursery south of the Site,

which was replaced by a swimming pool which appeared to be demolished by 2024. Mapping also showed a electricity substation directly south of the swimming pool, although it is not known whether these are still present.

4.4 Planning Department Records

The Reading Borough Council planning portal was searched to appraise the history of planning applications for the Site. The database records show 3 applications in the last 31 years. The following details were found:

- Installation of a roof light at 33 Bedford Road was approved in 2022.
- In 2023, it was approved for the Site to gain a certificate of lawfulness for existing use of the site as it is primarily used as an office with ancillary parking and outbuildings, falling within use of class E.
- The oldest application in 1994 was approved for alterations to front of building including a new display area and erection of new workshop and storage area to the rear of the Site.

4.5 Unexploded Ordnance (UXO) Records

Based on online UXO mapping available on the Zetica website the Site lies in an area of “low” risk of potential UXO.

Given the low-risk potential for UXOs to be present below site and in accordance with the guidance given in CIRIA C681, no further control measures relating to UXOs will be required prior to undertaking intrusive investigations.

5.0 Preliminary Environmental Risk Assessment

5.1 General

The methodology of this risk assessment uses the source-pathway-receptor contaminant linkage to provide a qualitative appraisal of environmental risks and potential liabilities associated with soil and groundwater contamination at the Site.

The initial conceptual site model (CSM) is prepared based on the current proposed development, which will comprise redevelop the Site's office to residential housing. Should proposals change then the CSM will need to be revisited.

5.2 Contamination Sources

Based on the information presented in this report the following sources of contamination have been identified.

Table 5.1: Summary of Potential Contamination Sources

Potential Sources	Potential Contaminants
On-site	
Made Ground from previous phases of development	Metals, polycyclic aromatic hydrocarbons (PAH) compounds, total petroleum hydrocarbons (TPH), asbestos, ground gas
Off-site	
Made Ground from previous phases of development	Metals, PAH compounds, TPH, asbestos, ground gas
Electricity substation and tank (less than 100m southwest of the Site)	TPH, polychlorinated biphenyls (PCB)

5.3 Pathways

Based on the information presented in this report the following potentially active pathways have been identified.

- Dermal contact or ingestion with soil and groundwater
- Inhalation of soil dust or respirable fibres of asbestos
- Surface runoff
- Leaching of contaminants and vertical migration into groundwater
- Lateral migration of contaminants in groundwater
- Contact with buried services
- Migration of ground gas and ingress into buildings

5.4 Receptors

Based on the information presented in this report the following receptors have been identified.

- Current/Future site users
- Neighbouring site users
- Construction and maintenance workers

5.5 Initial Conceptual Site Model

Based on the information presented in this report the following potential contaminant linkages have been identified.

Table 5.2: Potential Contaminant Linkages

Source	Pathway	Receptor	Potential Contaminant Linkage
On-Site Sources			
Made Ground from previous phases of development	Dermal contact, ingestion and inhalation pathways	Future site users	**No** The Site is covered in hardstanding.
		Neighbouring residents/site users	**No** Property to be refurbished, no intrusive works anticipated and Site is covered in hardstanding.
	Leaching of contaminants and vertical migration into groundwater	Groundwater (Secondary (A) Aquifer overlying Principal Aquifer)	**No** The Site is underlain by a Secondary (A) Aquifer which overlies a Principal Aquifer. The Site is covered in hardstanding which will limit infiltration of potential contaminants. .
	Migration of ground gas/organic vapour ingress into buildings	Future site users	**No** There is potential for ground gas and vapours to enter and accumulate in buildings. However, existing buildings have been present since the 1880s and 1960s/1970s with no known issues relating to ground gas reported. Refurbishment will not alter the floor design of the building.
		Construction workers	**No** No excavations anticipated.
Active Off-Site Sources			
Made Ground from previous phases of development	Dermal contact, ingestion and inhalation pathways	Future site users	**No** The Site is covered in hardstanding.

Source	Pathway	Receptor	Potential Contaminant Linkage
Electricity substation and tank (less than 100m southwest of the Site)		Construction workers	**No** No excavations anticipated.

6.0 Preliminary Geotechnical Hazards Assessment

Based on the available information presented in the preceding sections, the anticipated geotechnical hazards associated with the Site are summarised in the table below.

Table 6.1: Summary of Geotechnical Hazards

Hazard	Distance	Description
Made Ground	On-Site	A limited thickness of Made Ground is expected to underly the Site associated with previous developments. Made Ground has high variability and poor engineering properties. Consequently, unless adequately treated, the Made Ground is not considered a suitable founding stratum.
Buried Obstructions	On-Site	There is potential of buried obstructions within the Made Ground associated with past developments such as relict foundations. Also, the potential presence of large gravels and cobbles within the Made Ground, Taplow Gravel Member and cobbles of flint with the White Chalk Subgroup cannot be ruled out at this stage. Buried obstructions may delay construction operations and will require consideration for the selection of appropriate equipment.
Buried Concrete	On-Site	Made Ground and superficial deposits should be assessed for their aggressiveness to buried concrete to assist with the design of buried concrete for future developments.
Volume Change Potential	On-Site	Taplow Gravel Member my be present as cohesive material with reference to proximal historical BGS borehole logs. This material will likely exhibit volume change potential when subject to moisture content changes. The volume change potential characteristics should be investigated and assessed to inform the design of foundations.
Shallow Groundwater Level	On-Site	It is currently unknown if shallow groundwater is present beneath the Site within the Taplow Gravel Member. Also, shallower perched groundwater within Made Ground cannot be ruled out at this preliminary stage. Shallow groundwater, if present, will require management during construction, including dewatering, in relation to maintaining stability of proposed excavations and facilitating construction activities in dry conditions.

Hazard	Distance	Description
Settlement Prone Natural Soils	On-Site	Taplow Gravel Member is described as 'firm clay' in proximal historical BGS borehole logs. Such material may be compressible which may lead to short and long term settlement effects that could impact the proposed development if not appropriately dealt with.
Running Sand	On-Site	Running sand phenomena during excavations within Taplow Gravel Member cannot be ruled out especially if these deposits exist on-site in a loose state and are affected by the presence of shallow groundwater.
Potential Dissolution Features in Chalk	On-Site	45 natural cavities are indicated in chalk within 1000m of the Site, the nearest being 425m east of the Site. A majority of these features are noted as solution pipes. Should dissolution features be present within the chalk beneath the Site, this may have implications to the foundation design and drainage design, including the final location of any proposed soakaways.
Deep Foundations and Environmental Agency Consultation	On-Site	Should a deep foundation solution such as piling or deep ground improvement be required, the Environment Agency should be consulted with regards to construction operations within the Chalk which is a Principal Aquifer. A foundation risk assessment will likely be required.
Party Walls	Northern and Western Site Boundary	The neighbouring properties share a party walls with the subject site. Any impact of the proposed development on the neighbouring property should be assessed. Discussions with the neighbouring property owner via a party wall agreement will be required prior to finalising the design.

The above potential geotechnical hazards should be investigated with a site-specific ground investigation and be further assessed as discussed in the following sections.

7.0 Summary and Conclusions

7.1 Findings

The published geology is of Taplow Gravel Member (Secondary A Aquifer) over Seaford Chalk and New Haven Chalk Formation (Principal Aquifer). The strata are unconfined and the Site does not lie within a groundwater source protection zone. Therefore, groundwater is considered to be sensitive to mobile contamination.

Earliest available mapping (1879-1880) shows that the Site was already developed and appeared to comprise a terraced building (likely residential). The Site largely remained the same until sometime between the 1960s and early 1970s, where the Site appears in its current configuration with either the demolition of some buildings and construction of new ones, or extensions or the existing buildings. It is not known when it became A F Jones Stonemasons.

The surrounding area has largely comprised residential properties, with a dairy formerly located approximately 100m west of the Site in the 1880s until the 1890s. There are several branches of a railway line approximately 250m west and north of the Site. Historically there was a nursery south of the Site, which was replaced by a swimming pool which appeared to be demolished by 2024. Mapping also showed a electricity substation directly south of the swimming pool, although it is not known whether these are still present.

There is an unnamed surface water feature that lies 228 northwest of the Site. It is shown in the Landmark Envirocheck report; however, aerial mapping does not show the surface water feature, therefore it might be culverted.

7.2 Summary of Environmental Risk

Based on this assessment, it is considered that the former land uses could potentially impact the underlying soil and groundwater conditions.

It is understood that the proposed development will comprise the conversion of the existing building from an office to a residential property.

The Site will continue to be covered in hardstanding which will minimise the potential for direct contact with potential contamination by future site users.

There is potential for ground gases and organic vapours to enter and accumulate in buildings, however, existing buildings have been present since the 1880s and 1960s/1970s with no known issues relating to ground gas reported. Refurbishment will not alter the floor design of the building.

It is not considered that construction and maintenance workers and neighbouring site users could come into contact with contaminated soils and soil dust during the refurbishment phase.

The published geology is of Taplow Gravel Member (Secondary (A) Aquifer) over the bedrock of the White Chalk (Principal Aquifer). The Site does not lie within a groundwater SPZ. The aquifers are unconfined and therefore groundwater is considered to be sensitive to mobile contamination; however, the Site is covered and will remain covered in hardstanding, therefore limiting infiltration of potential contaminants.

There is an unnamed surface water feature that lies 228 northwest of the Site. It is shown in the Landmark Envirocheck report; however, aerial mapping does not show the surface water feature, therefore it might be culverted. The Site has the potential to be in hydraulic continuity with the groundwater in the Taplow Gravel Member. Given the distance from the Site, it is considered unlikely that the surface water will be sensitive to contamination and there is limited potential for contamination migration in groundwater from the Site to impact surface water receptors.

7.3 Summary of Geotechnical Hazards

Based on the available information, a number of potential geotechnical hazards are anticipated associated with the proposed development. These are Made Ground, buried obstructions, ground's aggressiveness to buried concrete, volume change potential soils, shallow groundwater, settlement prone soils, running sands, potential chalk dissolution features, EA consultation and party walls present to the north and west.

The proposed development will just comprise conversion / refurbishment of the existing buildings from offices to residential.

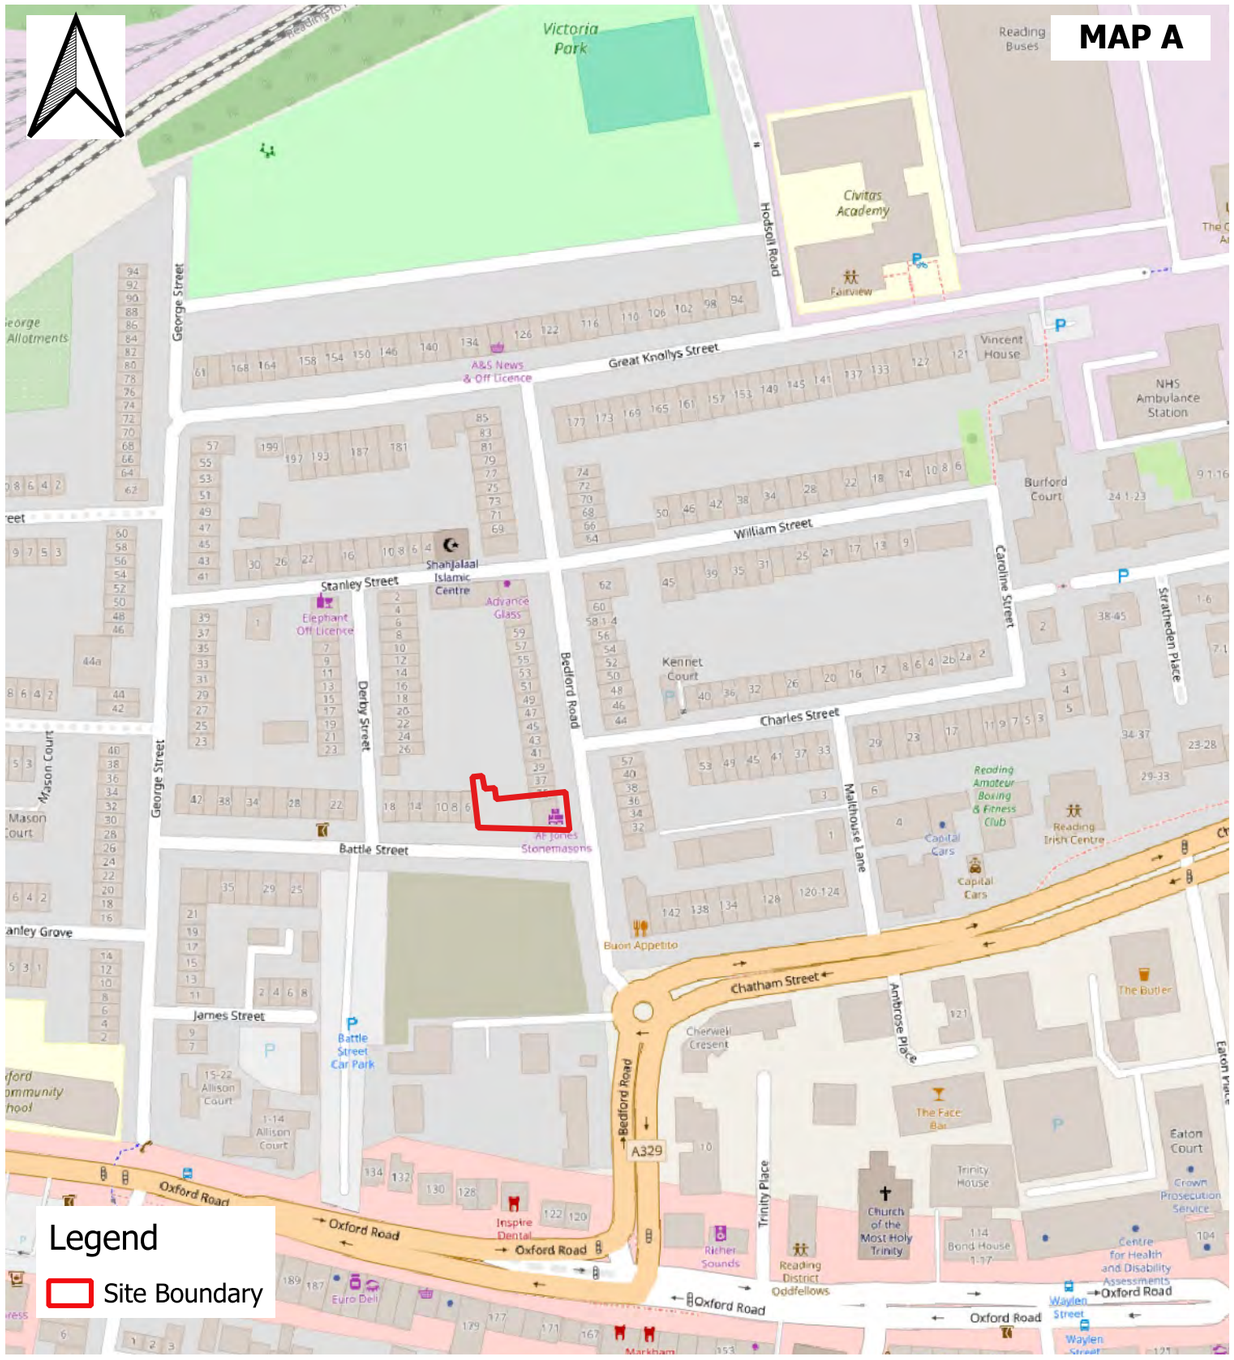

Should there be any redevelopment, a tailored site-specific ground investigation with geotechnical testing should be undertaken to ensure that the geotechnical hazards, discussed in this report are addressed and appropriate mitigation measures are proposed to inform the structural and civil engineering design.

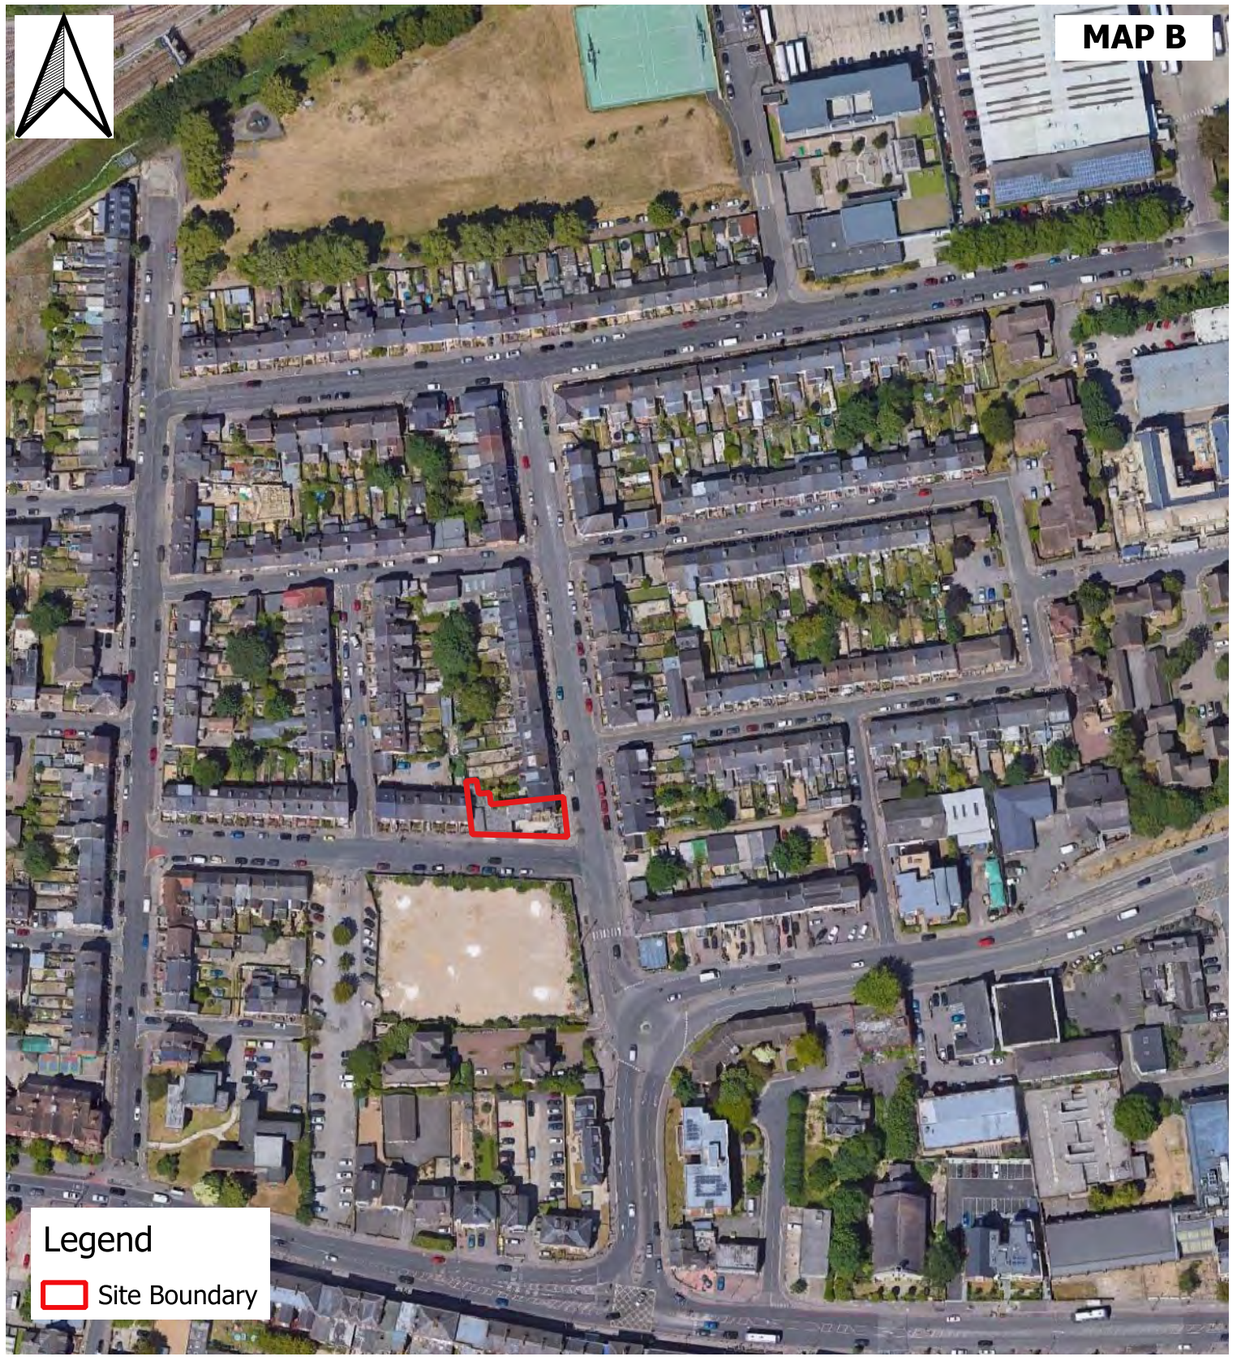

8.0 Recommendations for Further Work

Based on the proposed development comprising conversion / refurbishment of the existing office buildings into a residential building, it is considered that no further works including an intrusive investigation is required.

Should there be any change to the proposed plans including redevelopment of the Site, then a Tier 2 intrusive investigation is undertaken to further appraise underlying soil and groundwater quality and assess ground gas conditions. The Tier 2 ground investigation should include geotechnical testing to confirm the underlying geology, groundwater regime and engineering properties of the underlying soils. The ground investigation should be designed and assessed based on the requirements of BS5930:2015, Eurocode 7 Part 2 (and the associated National Annex), and NHBC Standards. The investigation and assessment should be tailored to ensure that the geotechnical hazards, discussed in this report are addressed and appropriate mitigation measures are proposed to inform the structural and civil engineering design. A Geotechnical Design Report may need to be prepared at a later stage in accordance with Eurocode 7, once the Tier 2 ground investigation and assessment have been completed and the final scheme details are known.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

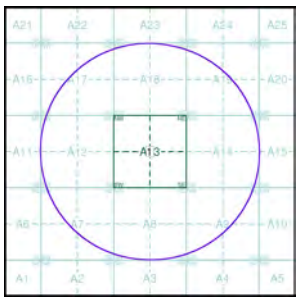

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

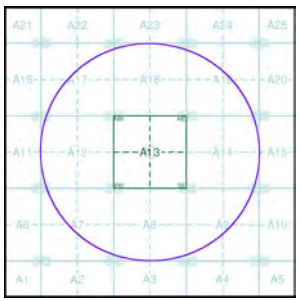

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

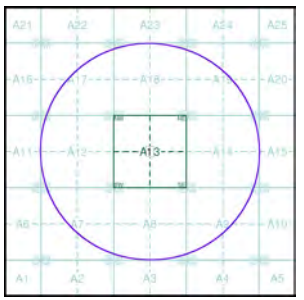

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Oxfordshire

Published 1882

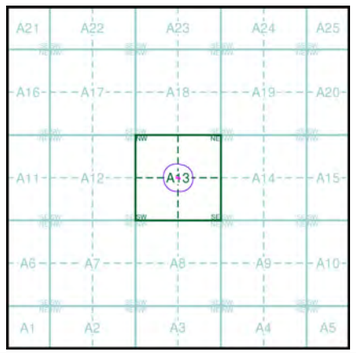

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Published 1883

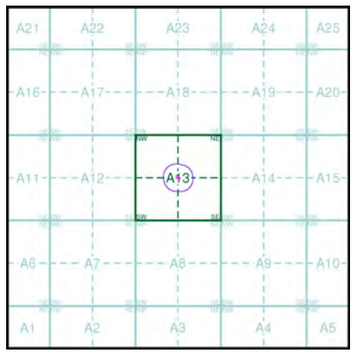

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

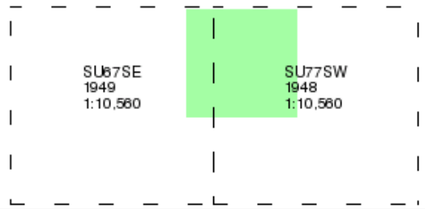

Published 1948 - 1949

Source map scale - 1:10,560

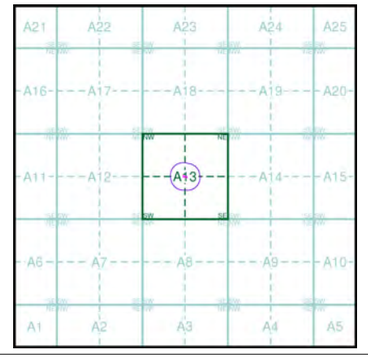

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan

Published 1995

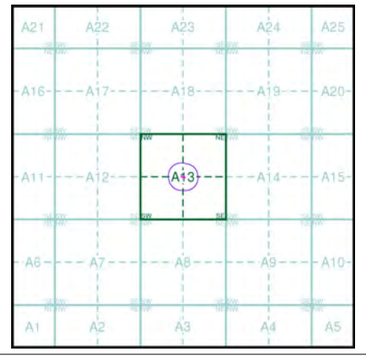

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

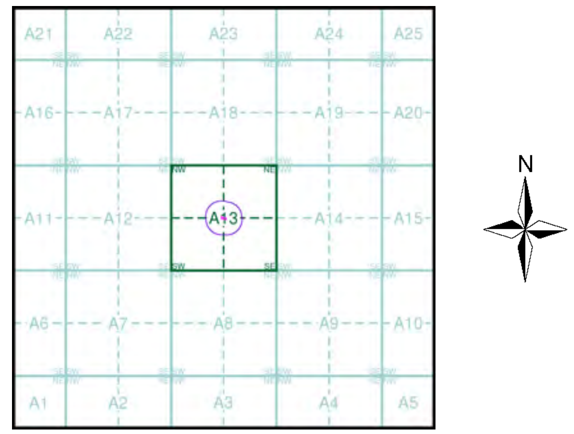

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2024

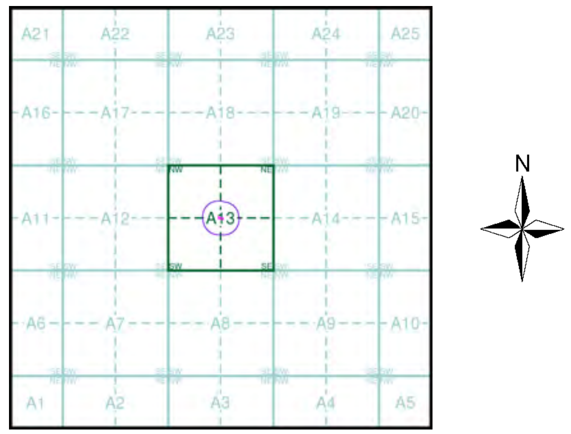

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Berkshire

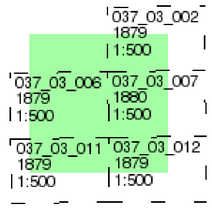

Published 1879 - 1880

Source map scale - 1:500

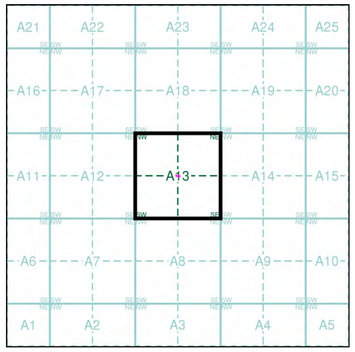

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Published 1879

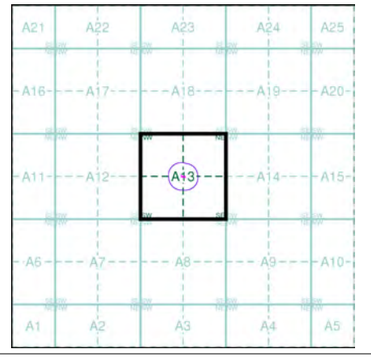

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1973 - 1974

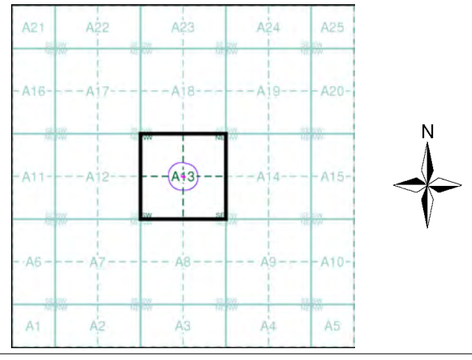

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.
