

Formal Objection to RBC Application # PL/25/0680 – 5 Stoneham Close, RG30 4HB

Once again, we must lodge strong objection to this property owner's repeated attempts to develop his residential back garden for commercial use in Stoneham Close. Our key Objections are:

1. **This will create Huge Traffic Hazard and will greatly increase Road Risks for all local residents and Students/parents of King's Academy Prospect School.**
2. As there is no guest parking space on the plot, **any ON-the-Road Parking will create further serious hazard for local road users and block other residents' houses.**
3. **Current # 5 Stoneham Close house has "No Off-Road Parking Spaces of its own"** and its residents park their vehicles on the road right in front of the proposed new house, blocking visibility and creating hazard for the locality. **Where will the residents of #5 Stoneham Close Park their vehicles?**
4. The proposal suggests new residents will be **entering and exiting directly on a blind corner, on a steep hill with no turning circle.** This is only 30 metres from a major school entrance where **hundreds of children walk past twice a day,** creating Hazard situation for the area.
5. This plan **does not align to the private residential demography of this area** – there are no garden structures/houses in the area. This will destroy the nice residential outlook for the Close and its adjacent houses and will also decrease the value of the current houses.
6. **Violation of Privacy for multiple residential homes** - this garden house will overlook directly onto multiple properties and their gardens, specially over houses in Cockney Hill and Stoneham Close.
7. There will be **no proper front space for the occupants in the proposed build.** This house will be right on the road, and it will be very risky for young children to live in.
8. The **proposed parking space (2 cars) will be very tight** and will be risky to get out.
9. This **build will destroy the beautiful natural habitat and greenery for multiple houses and local area.**
10. This proposed **plot is right on an electrical sub-station.** This can and will create noise and other health risks for any resident living so close to it.
11. **This will significantly alter the character of a pleasant quiet, residential family-centric area** with ungainly changes and make it very crowded.

Look forward to your kind response to our Objections to put a FULL STOP to this planning application.

Thank you.

Sincerely yours,
