APPENDIX F
Conceptual Model Cross Section

CONCEPTUAL CONTAMINATION GROUND MODEL

Offsite Potential Sources -
Current: Potential contamination and/or ground gas associated with nearby historical landfilling (780m northeast) and potentially infilled land (364m southwest)
Historical: Potential contamination and/or ground gas associated with off-site historical gasworks (500m northeast)
Potential unknown Made Ground associated with historical development within the area surrounding the site

Onsite Potential Sources -

Current: Potential unknown Made Ground associated with existing structures and historical demolition on the site
Historical: Potential contamination associated the sites historical use as a timber yard

Proposed Residential Development

Low Risk of Contamination.
Low Risk of Ground Gases

CLIENT: Watercastle Ltd
PROJECT No: P25-232pra
PROJECT TITLE: Abbey Wharf, 57-75 King's Road, Reading, RG1 3AB

Ordnance Survey Plan

Published 1962 - 1973

Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Map Name(s) and Date(s)

SU7173NE 1962 1:1,250	SU7273N 1973 1:1,250
SU7173SE 1962 1:1,250	SU7273S 1971 1:1,250

Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Published 1883

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography Published 1948

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Ordnance Survey Plan

Published 1973

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Reading

Published 1990

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2024

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities, and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

1.0 INTRODUCTION

Paddock Geo Engineering Limited (PGE) were instructed by Watercastle Ltd; the Client, to undertake a Preliminary Contamination Risk Assessment (Stage 1 Tier 1 of a Site Contamination Assessment) of the subject site, referred to as Abbey Wharf, 57-75 King's Road, Reading, RG1 3AB.

The overall objective of the Preliminary Contamination Risk Assessment (PRA) was to assess any potential risks to the proposed development of the site from contamination or any other potential geo-environmental or geotechnical hazards. The Risk Assessment undertaken relates to the proposed residential re-development of the site.

1.1 Terms of Reference

- British Standard BS10175:2011+A2:2017 Investigation of Potentially Contaminated Sites - Code of Practice;
- CLR7 Assessment of Risks to Human Health from Land Contamination 2002, DEFRA / Environment Agency (withdrawn);
- CLR8 Potential Contaminants for the assessment of Land 2002, DEFRA / Environment Agency (withdrawn);
- PPG23 (PPS23) Planning and pollution control (contaminated land aspects) 2002;
- GPLC1 Guiding Principles for Land Contamination 2010, Environment Agency;
- Environmental Protection Act: 1990 – Contaminated Land Statutory Guidance, April 2012, DEFRA;
- CIRIA C665 Assessing risks posed by hazardous ground gases to buildings, CIRIA 2007; and
- BS 8576:2013 Guidance on investigations for ground gas - Permanent Gases and Volatile Organic Compounds (VOCs).
- Land Contamination Risk Management (LCRM), 2023, Environment Agency

2.0 THE SITE AND SURROUNDING AREA

2.1 Site Description

The site is rectangular in shape, covers approximately 0.21ha and is centred on an approximate National Grid Reference (NGR) 472030, 173410.

Site Location Plans and an Aerial Photograph are presented in Appendix A.

2.2 Proposed Development

The proposed development is understood to comprise the change of use of ground, first, second, third and fourth floors in an existing building from Class E (offices) to C3 (dwelling houses) to comprise 78 apartments (27 x studios, 43 x 1 bed and 8 x 2 bed apartments). The proposal is understood to include no areas of soft standing or residential gardens.

The soil contamination exposure characteristics for the proposed development will be residential. A proposed site layout plan is included within Appendix A.

2.3 Walkover Survey

2.3.1 Site Area

A site walkover survey was conducted on 11th July 2025 by a representative of Paddock Geo Engineering Limited. A series of photographs taken during the walkover survey are presented in Appendix B along with a Site Walkover Survey Plan.

The site is rectangular in shape situated between Kings Road and the River Kennet on Abbey Wharf, Reading, RG1 3AB.

The site is level and comprises a single five storey commercial building of brick construction which extend across the full extent of the site area.

The building is bordered by public footpaths and public highway along its southern and eastern boundary and public foot paths and the River Kennet along its northern and western boundary. At the time the site walkover was undertaken the building was occupied by various different business set over different floors. Access to the building was from the south off Kings Road.

The building was noted to contain an underground carpark within a basement while the water level of the River Kennet sat at approximately 3 to 4m the ground surface of the existing commercial building. The river ran through a tunnel, underneath Kings Road at the southwestern corner of the site.

The site appears to be low risk for potential sources of onsite contamination. The most likely sources of onsite contamination are associated with potential Made Ground across the developed areas of the site.

2.3.2 Surrounding Area

The area surrounding the site is largely urban commercial. The River Kennet forms the northern and western site boundaries. The wider surrounding area generally comprises of commercial buildings in all directions.

2.4 Previous Investigations

PGE are not aware of any previous intrusive investigations or environmental walkovers for the subject site or the immediate area.

3.0 GEO-ENVIRONMENTAL SETTING

3.1 Geology

Information on the underlying geology at the site has been obtained from the British Geological Survey (BGS) online Geoindex Map Viewer and Geological Mapping information provided by Landmark within the Envirocheck Report (a copy of which is provided in Appendix C).

The geological maps indicate that the site is directly underlain by superficial Alluvium. The bedrock at the site is formed of the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated)

No artificial ground/Made Ground are indicated to be present on the site.

3.1.1 Borehole Records

A search of the online BGS database for published borehole records within the area identified the nearest available borehole record is located at 100m to the northeast (SU77SW134). The borehole record is shown to fall within an area containing comparable geology.

Borehole reference SU77SW134, was drilled to 20.0m bgl. The encountered geology comprised Made Ground to 3.40m bgl over superficial sand and gravel to 5.40m bgl over chalk to >20m bgl.

3.2 Radon

The subject site is indicated within the Envirocheck Report and the BGS Radon Indicative Atlas (2022) to be in an area of low probability radon potential, where less than 1% of dwellings are estimated to be above the radon action level. As such, no radon protective measures are considered necessary in the construction of buildings.

3.3 Hydrogeology, Hydrology and Site Sensitivity

Site specific sensitivity maps provided by Landmark Information Group are included within Appendix D and were referenced for the following sub-sections.

3.3.1 Hydrogeology

The superficial Alluvium is classified as a Secondary A aquifer and the bedrock strata across the site are classified as a principal Aquifer.

The site is not situated within a Groundwater Source Protection Zone (SPZ) and none are mapped within 1km of the site.

Four groundwater abstractions are listed within 1km of the site. The nearest groundwater abstraction to the site is listed as licence number 28/39/22/0600, located 671m east at a former gasworks, for use as pump & treat pollution remediation.

Based on the foregoing, the groundwater vulnerability across the site is considered by Envirocheck to be 'Moderate' on the basis of the underlying Principal Aquifer designation.

3.3.2 Hydrology

The Envirocheck Report indicates that there are 26no. permanent surface water features within 500m of the site boundary. The nearest recorded surface water feature is the River Kennet at 10m west of the site.

The Envirocheck report records two surface water abstractions within 1km of the site. The nearest surface water abstraction to the site is listed under licence number 28/39/22/0594 which is operated by Oracle Shopping Centre Ltd from an amenity lake or pond.

3.3.3 Ecological Receptors

No major ecological receptors are indicated to be present within 1km of the site.

3.4 Flood Risk

The flood map included in Appendix D indicates the site is located within flood zone 1 (< 1 in 1000 (0.1%) annual probability of flooding in any given year). Flood Zone 1 is the lowest risk classification with regards to flooding from rivers or the sea.

Further to the above, the site is shown to be at Low risk of flooding from surface water.

The BGS groundwater flood susceptibility mapping indicates the site is situated within an area with a potential for groundwater flooding to occur at the surface.

The above information does not constitute a flood risk assessment to be undertaken for the site.

4.0 UNEXPLODED ORDINANCE

Available online information and historic records indicate that the site is at a low risk of unexploded ordinance.

5.0 ENVIRONMENTAL DATABASE INFORMATION

A detailed database of environmental information is included within the Envirocheck report as included within Appendix D. The database includes Agency & Environmental, Waste management, Landfills, Hazardous Substances and industrial land uses. The main points of note within this database are presented in Table 1 below. All distances stated are approximate and positional accuracy may be to within 100m in some cases.

Table 1: Summary of Environmental Database Information

Hazard	No. of entries			Details of notable database entries	
	0-250m	251-500m	501-1,000m	Distance (m) & Direction from Site	Additional Information
Discharge consents	13	3	21	6 NW	Discharge Of Other Matter-Surface Water into River Kennet
				15 NE	Discharge Of Other Matter-Surface Water into River Kennet
				67 NW	Discharge Of Other Matter-Surface Water into Holy Brook
				67 NW	Discharge Of Other Matter-Surface Water into Holy Brook
				76 NW	Discharge Of Other Matter-Surface Water into Holy Brook
				95 W	Trade Effluent Discharge-Site Drainage into Holy Brook
Local Authority Pollution Prevention	0	3	3	-	None identified within 250m of the site

Hazard	No. of entries			Details of notable database entries	
	0-250m	251-500m	501-1,000m	Distance (m) & Direction from Site	Additional Information
controls (LAPPC)					
Pollution Incidents to controlled waters	34	13	121	5 W 6 SW 10 W 11 SW 43 E 44 E 48 E 84 NE 86 S 91 S 100 SE	Category 3, Minor Incident, August 1996 Category 3, Minor Incident, October 1993 Category 3, Minor Incident, September 1991 Category 3, Minor Incident, November 1991 Category 3, Minor Incident, August 1992 Category 3, Minor Incident, August 1991 Category 3, Minor Incident, November 1993 Category 3, Minor Incident, January 1998 Category 3, Minor Incident, April 1995 Category 3, Minor Incident, July 1995 Category 3, Minor Incident, April 1998
Registered Radioactive Substance	0	0	14	-	None identified within 500m of the site
Substantiated Pollution Incident Register	1	0	1	197 W	Category 2 - Significant Incident to water, oils
Historical Landfill Sites	0	0	1	780 NE	Inert and industrial waste at Napier Road Reading
Licensed Waste Management Facilities	0	1	1	284 N 632 NW	Mobile plant treatment for soil Mobile Plant for land spreading sewage sludge
Local Authority Recorded Landfill Sites	0	0	1	970 NE	Napier Road Landfill – no further details given
Potentially Infilled Land	0	3	5	841 SW 364 SW 430 SW 486 SW	Potentially Infilled Land (Non-Water), 1995 Potentially Infilled Land (Water), 1900 Potentially Infilled Land (Water), 1900 Potentially Infilled Land (Water), 1962
Control of Major Accident Hazards Sites (COMAH)	0	0	3	-	None identified within 500m of the site

Hazard	No. of entries			Details of notable database entries	
	0-250m	251-500m	501-1,000m	Distance (m) & Direction from Site	Additional Information
Contemporary trade directories, Industrial land uses,	27	85	134	56 to 1km in various directions	Active contemporary trade directories of interest within 1km of the site include freight forwarders, tyre dealers, boilers, chemicals and allied products, printers, carpet cleaners, cleaning, car breakers, waste disposal services, chemical manufacturers, window frame manufacturers, and dry cleaners The nearest active entry to the site is listed as Freight Forwarders 56m east
Fuel stations	0	1	4	451 SE	Mfg Reading, BP Petrol Station, Active

A review of the available information has identified limited potentially contaminative land uses within 500m of the site. Those identified are considered further in the initial Conceptual Site Model (CSM) presented in Section 9.0.

6.0 GEOTECHNICAL RISKS

The geotechnical risks that could impact the site and any shallow foundations present are listed below.

6.1 Ground Instability

Table 2: Summary of Geotechnical Risk

Hazard	Assessed On-Site Risk (and area within 10m of the site)	
	Present	Level
Potential for Collapsible Ground Stability	✓	Very Low
Potential for Compressible Ground Stability	✓	Moderate
Potential for Ground Dissolution Stability	✓	Very Low
Potential for Landslide Ground Stability	✓	Very Low
Potential for Running Sand Ground Stability	✓	Low
Potential for Shrinking or Swelling Clay	✓	Very Low

The information in Table 2 indicates that the site is generally at worst case moderate risk of being affected by ground instability arising from the geological conditions at the site. The information gained from the Landmark database, as detailed in Table 2, is information relating to natural bedrock strata, as such does not represent likely hazards from any potential Made Ground.

6.2 Mineral Extraction

The mining history of the site and surrounding area has been deduced primarily from information supplied within the Envirocheck Report along with a review of online Coal Authority mapping database.

The available information indicates that the site is not located within a Coal Mining Reporting Area. The consulted environmental database (Appendix D) lists three BGS recorded mineral sites, eleven manmade cavities and seven natural cavities within 1km of the site. This include;

BGS Recorded Mineral Sites

- Ivy Bridge Brick Field, open cast clay and shale at 918m south – ceased
- Katesgrove Kilns, open cast clay and shale at 926m south – ceased
- Ivy Bridge Brick Field, open cast clay and shale at 989m south – ceased

Man-Made Mining Cavities

- Historical Chalk/Lime Quarry-Potential Chalk Mining cavity 324m southeast
- Brick/Tile Kiln Discovered-Potential Chalk Mining cavity 499m south
- Possible Excavation/Shallow Bell Pit cavity 578m southwest
- Crown Hole Collapse cavity 673m south
- Historical Brick Kiln-Potential Chalk Mining cavity 694m south
- Chalkwell/Possible Shaft Entry Pillar and Stall Chalk Mine cavity 754m southwest
- Historical Brick Works/Extensive Clay Excavations-Potential Chalk Mining cavity 799m southwest
- Historical Brickworks-Multiple References to Chalk Mining cavity 897m southwest
- Historical Brick Kiln-References to Chalk Mining cavity 900m south
- Shaft described-for Pillar and Stall Chalk Mine cavity 939m southwest
- Historical Brick Works-Potential Chalk Mining cavity 939m south

Natural Cavities

- Solution Pipe 459m west
- Solution Pipe 509m west
- Solution Pipe 520m west
- Solution Pipe 640m west
- Solution Pipe 717m southwest
- Solution Pipe 865m east
- Solution Pipe 909m west

Based on the foregoing, and given the distance and time lapsed regarding the potentially infilled land, the site is at low risk from hazards associated with mineral extraction and infilling.

6.3 Landfills and Infilled Land

The EnviroCheck Report identifies a single historical landfill site within 1km of the site which is listed as

- Inert and industrial waste at Napier Road, Reading 780m northeast of the site operated between 1950s and 1970s- remediated.

Infilled land – see Table 1

7.0 HISTORIC LAND USE MAPPING SUMMARY

A review of the available historical maps, as included in the Envirocheck Report, has been carried out and is summarised in Table 3. The reviewed maps comprise County Series, Ordnance Survey Plans and Other Survey Information (at various scales). Maps covering the site were published between 1879 and 2024. The mapping data set is presented in Appendix C.

The maps are reproduced in accordance with Landmark Information Group Limited's Ordnance Survey License.

Any identified uses of the site and the surrounding area that are considered potentially contaminative are shown in ***bold italics***. The distances and directions from the site stated in Table 3 below are approximate.

Table 3: Historical Map Review

Date of mapping	Site History	History of the area surrounding the site
1879 (1:2,500) 1883 (1:10,560)	The site is shown to comprise a <i>timber yard</i> which extends across the northern half of the site, around four small residential properties on the southeastern quarter of the site and a Wharf in the southwestern quarter of the site. Both the timber yard and the wharf comprise two small buildings and open laydown areas.	The area surrounding the site is largely residential to the south and west and commercial to the north and northeast. The River Kennet runs along the northern and western site boundary. A prison is shown north of the river, 50m north of the site. A biscuit factory is shown 120m northeast of the site and a <i>gas works</i> is shown 200m east of the site. Abbey <i>saw mills</i> is shown 30m northwest of the site.
1899 (1:2,500) 1900 (1:10,560) 1901 (1:10,560)	No significant change.	An additional <i>gas works</i> is now shown from 500m northeast.
1912 (1:2,500) 1913-1914 (1:10,560)	An additional building is shown to have been constructed within the laydown area of the timber yard.	No significant change.
1931 (1:2,500) 1933 (1:10,560)	No significant change.	No significant change.
1957 (1:2,500) 1962 (1:10,000)	No significant change	A printing works is now shown at 200m southeast of the site. Abbey saw mills is shown to have been replaced with abbey wharf at 30m northwest of the site. A <i>landfill</i> is shown at 780m northeast
1962-1973 (1:2,500) 1973 (1:10,000)	All building associated with the wharf and the timber yard are shown to have been demolished with the majority of the site now shown to be undeveloped. The residential properties in the site southeastern quarter remain present.	The landfill is shown to have been redeveloped into a depot. The area to the west and northwest of the site formerly shown as abbey wharf is now shown as an undeveloped parcel of land. Minor changes are shown within the surrounding area indicating the transformation of some residential properties to commercial use.

Date of mapping	Site History	History of the area surrounding the site
1979-1989 (1:2,500) 1990 (1:10,000)	By 1989 the residential properties are shown to have been demolished and the entire site is now shown as undeveloped.	A number of residential properties 15m south of the site are shown to have been re-developed into larger commercial units. The biscuit factory is shown to have been largely demolished and redeveloped into a new large commercial unit.
1968-1991 (1:2,500)	By 1991 the site is shown to have been redeveloped into its existing form which includes a single commercial unit which extends across the full extent of the site.	No significant change
1993 (1:2,500) 1995 (1:10,000)	No significant change	The majority of the smaller residential properties in the area to the south of the site are shown to have been redeveloped into commercial building.
1999 aerial (1:2,500) 1999 (1:10,000)	No significant change	No significant change
2006 (1:10,000)	No significant change	No significant change
2024 (1:10,000)	No significant change	No significant change

7.1 Historical Mapping Summary

The earliest available map shows that by 1879 the site formed a timber yard across the northern half, around four small residential properties on the southeastern quarter and a Wharf in the southwestern quarter of the site. By 1991 the site is shown to have been redeveloped into its existing layout comprising of a single large commercial building.

By 1979 the area surrounding the site was largely developed as residential to the south and west and commercial to the north and northeast. By this time the surrounding area included a prison 50m north of the site, a biscuit factory 120m northeast and a gas works is shown 200m east of the site. Progressive redevelopment of the area surrounding the site from residential to commercial has been undertaken from around 1990 to the present day.

7.2 Planning Search

A search of Reading Borough Councils planning portal was undertaken for the site and the immediate surrounding area on the 8th July 2025. The aim of the search was to gather details of relevant planning applications.

A single application was identified onsite which relates to the ongoing proposed development at the site as detailed in Table 4.

No further details of onsite or off-site planning applications were available at the time of writing this report.

Application number	Application Details	Site address
PL/25/0642	Change of use of ground, first, second, third and fourth floors (all floors) from Class E (offices) to C3 (dwelling houses) to comprise 78 apartments (27 x studios, 43 x 1 bed	ABBEY WHARF, 57-75 KINGS ROAD, READING, RG1 3AB

Report on behalf of Watercastle Ltd

P25-232pra - Abbey Wharf, 57-75 King's Road, Reading, RG1 3AB

Application number	Application Details	Site address
	and 8 x 2 bed apartments). Prior Notification under Class MA, Part 3 of Schedule 2 of the Town and Country Planning (General Permitted Development) Order 2015.	

7.3 Summary of Environmental Search Data

The review of the available environmental data obtained from the Envirocheck Report, local planning authority and the site walkover survey, as detailed in the preceding sections of this report, have indicated the following potential risks from contamination within 500m of the site (or further if considered significant).

Current or Recent Land Uses

- Potential unknown Made Ground associated with existing structures and historical demolition on the site: **Low Risk;**

Historical Land Uses

- Potential contamination associated the sites historical use as a timber yard: **Low Risk;**
- Potential contamination and/or ground gas associated with nearby historical landfilling (780m northeast) and potentially infilled land (364m southwest): **Low Risk;**
- Potential contamination and/or ground gas associated with off-site historical gasworks (500m northeast): **Low Risk;**
- Potential unknown Made Ground associated with historical development within the area surrounding the site: **Low Risk;**

Site Environmental Features

- The superficial Alluvium beneath the site is classified as a Secondary A aquifer
- The underlying Bedrock strata is listed as a Principal Aquifer.
- The site is not located within a groundwater source protection zone.
- The closest surface water feature is the River Kennet at 10m west of the site.

8.0 Preliminary Conceptual Site Model and Risk Assessment

8.1 Risk Assessment Guidance

Guidance has been published by the Department of the Environment, Transport and the Regions (DEFRA) 'Environmental Protection Act 1990: Part 2A - Contaminated Land Statutory Guidance' (DEFRA April 2012) which promotes the 'risk-based approach' for defining contaminated land. The statutory guidance states:

“Part 2A takes a risk-based approach to defining contaminated land. For the purposes of this Guidance, “risk” means the combination of: (a) the likelihood that harm, or pollution of water, will occur as a result of contaminants in, on or under the land; and (b) the scale and seriousness of such harm or pollution if it did occur.”

A means to assess the risk posed by potential contamination on or under a site is to carry out a preliminary contaminated land risk assessment. The risk assessment process is defined within the statutory guidance:

“For a relevant risk to exist there needs to be one or more contaminant- pathway-receptor linkages - “contaminant linkage” - by which a relevant receptor might be affected by the contaminants in question. In other words, for a risk to exist there must be contaminants present in, on or under the land in a form and quantity that poses a hazard, and one or more pathways by which they might significantly harm people, the environment, or property; or significantly pollute controlled waters. For the purposes of this Guidance:

(a) A “contaminant” is a substance which is in, on or under the land and which has the potential to cause significant harm to a relevant receptor, or to cause significant pollution of controlled waters.

(b) A “receptor” is something that could be adversely affected by a contaminant, for example a person, an organism, an ecosystem, property, or controlled waters. The various types of receptors that are relevant under the Part 2A regime are explained in later sections.

(c) A “pathway” is a route by which a receptor is or might be affected by a contaminant.”

The contaminant linkage is described within the statutory guidance as:

“The term “contaminant linkage” means the relationship between a contaminant, a pathway and a receptor. All three elements of a contaminant linkage must exist in relation to particular land before the land can be considered potentially to be contaminated land under Part 2A, including evidence of the actual presence of contaminants. The term “significant contaminant linkage”, as used in this Guidance, means a contaminant linkage which gives rise to a level of risk sufficient to justify a piece of land being determined as contaminated land. The term “significant contaminant” means the contaminant which forms part of a significant contaminant linkage”.

The following sections relate to a qualitative risk assessment of the site and surrounding environs.

The data within this assessment will be employed to produce a Conceptual Site Model which will be tested to assess if a ‘significant possibility of significant harm’ to human health, non-human health or significant pollution to controlled waters is likely to occur and the risk level posed by any such linkages. The risk level classification system employed in the risk assessment is generally based upon those described in CIRIA C552¹.

8.2 Potential Contaminant Sources

The potential contamination sources identified as part of this Preliminary Contamination Risk Assessment are summarised in the table below. The potential contaminants are based on the data within CL8, Department of the Environment (DoE) Industry Profiles, the current and historic site uses.

¹ Rudland, D., Lancefield, R.M., Mayal, P.N. (2001) Contaminated Land Risk Assessment: A Guide to Good Practice. CIRIA C552. UK.

Table 4: Potential Contamination Sources

Current Potential On-Site Contaminant Sources	Potential Contaminants
Potential unknown Made Ground associated with existing structures and historical demolition on the site	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH), asbestos and ground gas.
Historical Potential On-Site Contaminant Sources	Potential Contaminants
Potential contamination associated the sites historical use as a timber yard	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH), asbestos.
Current Potential Off-Site Contaminant Sources	Potential Contaminants
Potential contamination and/or ground gas associated with nearby historical landfilling (780m northeast) and potentially infilled land (364m southwest)	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH) and ground gas
Historical Potential Off-Site Contaminant Sources	Potential Contaminants
Potential contamination and/or ground gas associated with off-site historical gasworks (500m northeast)	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH) and ground gas
Potential unknown Made Ground associated with historical development within the area surrounding the site	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH) and ground gas

8.3 Conceptual Source-Pathway-Receptor Model

The information gathered in this Preliminary Contamination Risk Assessment has been compiled to produce a Source-Pathway-Receptor (S-P-R) model for potential onsite and off-site contamination sources, these are summarised in the tables 5 and 6 below. A Contamination Conceptual Site Model Cross Section is presented in Appendix F.

The risk posed to site construction workers has not been assessed as any risks will be mitigated through good site practices such as dust suppression and the use of Personal Protective Equipment (PPE).

Table 5: Source-Pathway-Receptor Model for onsite sources

Potential Site Contaminant Sources	Potential Pathways	Potential Receptors	Pathway Complete	Risk Level Classification
Current	Dermal / direct contact	Current site users	No	
	Direct ingestion		No	
	Direct inhalation		No	
	Inhalation of Radon		No	

Potential Site Contaminant Sources	Potential Pathways	Potential Receptors	Pathway Complete	Risk Level Classification
Potential unknown Made Ground associated with existing structures and historical demolition on the site Historical Potential contamination associated the sites historical use as a timber yard.	Inhalation of wind-blown dust		No	
	Vapour migration		No	
	Ground gas migration		No	
	Dermal / direct contact	Future site users (residential)	No	
	Direct ingestion		No	
	Direct inhalation		No	
	Inhalation of Radon gas		No	
	Inhalation of wind-blown dust		No	
	Vapour Migration onto the site		No	
	Ground gas migration		Yes	Low
	Direct contact	Services (following redevelopment)	Yes	Low
	Migration of contaminants: non-aqueous phase		Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low
	Migration of contaminants off-site: non-aqueous phase	Adjacent Properties	Yes	Low
	Migration of contaminants off site: aqueous phase		Yes	Low
	Vapour migration		Yes	Low
	Inhalation of wind-blown dust	Ecological Impacts	Yes	Low
	Migration of contaminants: non-aqueous phase		Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low
	Migration of contaminants from site: non-aqueous phase	Controlled groundwater	Yes	Low
	Migration of contaminants from site: aqueous phase		Yes	Low
	Migration of Contaminants: non-aqueous phase	Surface Waters	Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low

Table 6: Source-Pathway-Receptor Model for off-site sources

Potential Site Contaminant Sources	Potential Pathways	Potential Receptors	Pathway Complete	Risk Level Classification
Current Potential contamination and/or ground gas associated with nearby historical landfilling (780m northeast) and	Dermal / direct contact	Current site users	No	
	Direct ingestion		No	
	Direct inhalation		No

	Migration of contaminants: non-aqueous phase		Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low
	Migration of contaminants from site: non-aqueous phase	Controlled groundwater	Yes	Low
	Migration of contaminants from site: aqueous phase		Yes	Low
	Migration of Contaminants: non-aqueous phase	Surface Waters	Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low

9.0 POTENTIAL CONTAMINATION RISK SUMMARY

The preliminary contamination risk assessment has identified that a complete Source-Pathway-Receptor (SPR) linkages at the site is likely to exist as part of the proposed development with a worst-case **Low** risk level from potential sources of ground gas and risk drivers identified on the site and surrounding area.

There is the potential for the presence of inorganics, organics, hydrocarbons (PAH and TPH) in Made Ground at the site associated with historical uses and development on the site. However, given the significant redevelopment of the site around 1991, which included the construction of a basement, it is considered likely that any residual contamination associated with the historical timber yard will have been removed.

Further to the above, given there are no significant structural changes or areas of proposed soft landscaping incorporated into the proposed design, any residual contamination will remain encapsulated below the existing building and is unlikely to come into contact with future site users.

Additionally, the risk at the site as a result of migrating ground gas is considered to be low due to the distance from the site of the historical landfill (780m northeast) and the nearest area of potentially infilled land (364m southwest) along with the time that has lapsed (1970s and 1962 respectively), whereby the generation of ground gas from the decomposition of organic materials would have significantly diminished. It is also noted that the historical landfill site subsequently underwent remediation efforts, which would have addressed any residual contamination or gas risks, further minimising the likelihood of ground gas migration to surrounding areas.

Given these factors, there is considered to be a potentially complete S-P-R linkage between any potential sources of ground gas within the vicinity of the site through ground gas migration and inhalation pathways. However, the risk is considered to be LOW. These potential contamination features are also deemed to pose a potential hazard to ecology and controlled waters, albeit with a very low risk level.

Given the discussion above, the site is considered suitable for the proposed development and no further works with regards to contamination are considered necessary.

Further to this, should any unexpected contamination be identified during the future development groundworks, then a suitably qualified and experienced Geo-Environmental Engineer should be consulted and if necessary further assessment should be undertaken.

CERTIFICATION

This report is produced for the sole use of the Client, and no responsibility of any kind, whether for negligence or otherwise, can be accepted for any third party who may rely upon it.

The site walkover survey was carried out within reasonably accessible areas of the site. No responsibility of any kind can be accepted for any conditions or features not identified due to inaccessibility of areas such as locked, unstable or unsafe buildings and heavily overgrown areas.

The conclusions and recommendations given in this report are based on our understanding of the future plans for the site and based on a scope of works agreed by the Client and afforded by the agreed budget. No responsibility is accepted for conditions not encountered, which are outside of the agreed scope of work.

If the future plans for the site are changed, such as the site is developed for a more or less sensitive use, then a different interpretation might be appropriate.

The report has been prepared following the guidelines and principles established in the British Standards, BS 10175:2011, entitled 'Investigation of Potentially Contaminated Sites – Code of Practice' and the DEFRA / EA Contaminated Land Reports CLR7 and CLR8. It necessarily relies on the co-operation of other organisations and the free availability of information and total access. No responsibility can, therefore, be accepted for conditions arising from information that was not available to the investigating team as a result of information being withheld or access being denied.

This report may suggest an opinion on a possible configuration of strata or conditions between exploratory points and below the maximum depth of investigation. However, this is for guidance only and no liability can be accepted for its accuracy.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Geology 1:50,000 Maps Coverage

Map ID:	1

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- In-filled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Berkshire

Published 1879

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the Ordnance Survey, which were adopted for England, Wales and Scotland in the 1940s. The 1854 map of Berkshire was the first to be published by the Ordnance Survey, and covered the whole of what was considered to be the cultivated parts of Great Britain. The published date given below is often many years later than the surveyed date. Before 1938 all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.
