Report reference
86529R1

Risk – Low to Moderate/Low

It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing of soil samples) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities and associated ground works (which would include a thorough inspection of any exposed sub surface soils/Made Ground) would likely be sufficient.

Note: it is presumed from available development plans that the existing basement will remain uninhabited. Should future use of the Site include a habitable basement (i.e. sleeping accomodation), it is recommended that further assessment of the residual vapour risks posed by the local ground conditions is recommended. This could include ambient air / vapour sampling and testing within the existing on-Site basement.

GeoSmart Information

Executive Summary

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site. GeoSmart are providing consultancy and professional opinion based upon our collation, interpretation and assessment of information contained within an Envirocheck report, and other sources where expressly stated (i.e. site visits, photographs, and anecdotal evidence). It is acknowledged that the risk assessment findings are based on documentary sources of information alone.

Site analysis

1. **Probability/likelihood** of a contaminant hazard at the Site	High likelihood	
	Likely	
	Low likelihood	
	Unlikely	
2. Potential **severity/consequence** of any impacts	Severe	
	Medium	
	Mild	
	Minor	
3. **Overall land quality risks posed by the Site**	Very high	
	High	
	Moderate	
	Moderate/low	
	Low	
	Very low	

Summary of existing and proposed development

The Site is currently used within a mixed residential / commercial capacity as an end-of-terrace, three-storey property with a retail unit on the ground floor and residential flats on upper floors, as well as an unoccupied basement.
Development proposals comprise the conversion of the property into four 1 and 2 bed self-contained residential flats including a first floor rear extension, dormer extensions, associated internal reconfiguration and minor external alterations.

Environmental Setting

British Geological Survey mapping indicates the absence of any superficial deposits beneath the Site. The bedrock geology consists of the Lambeth Group which is classified as a Secondary (A) Aquifer. Artificial deposits (infilled ground) are mapped c. 20 m west of the Site, and worked ground (void) is mapped c. 35 m south. Historical mapping suggests the likely absence of any appreciable Made Ground / infilled ground within 50 - 100 m of the Site.

The nearest water feature is the River Kennet , located c. 30 m west of the Site boundary.

There are no environmentally sensitive land uses within 500 m of the Site.

Site History

The Site was first developed in the 1800s, with an undefined building identified on-Site from historical mapping, which was presumed to be part of a wider brick and tile works. This building (along with the surrounding land area) was cleared and replaced with an assumed residential dwelling prior to 1899. There was potentially some demolition / construction / alterations to the on-Site building during the mid 1900s.

Radon

The Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).

Coal Mining

The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues.

Summary of Conceptual Site Model (CSM)

Source of Contamination
Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils.
Limited potential for volatile organic contaminants to be present within the subsurface soils.
Potential for asbestos containing materials within the subsurface soils.
Limited potential for dissolved phase contaminants to be present within shallow groundwater.

Receptors
Human Health, Controlled Water (groundwater within the underlying bedrock Secondary (A) Aquifer; and the nearest surface water feature (River Kennet) c. 30 m west).

Human Health (pathway)
Ingress into water supply pipework and subsequent water ingestion.
Migration of any soil vapours into the proposed structure; inhalation indoors.
Migration of any ground gasses into the proposed structure.

Controlled Waters (pathway)
Dissolution into pore water/shallow groundwater and subsequent migration. Dissolution into aqueous phase and preferential migration via drainage structures. Lateral and vertical groundwater movement via natural or artificial flow paths.

Preliminary Risk Assessment

Given the potential presence of Made Ground / infilled ground beneath the Site it is possible that some residual contamination is present within the sub surface. However, given the time that has elapsed since former light industrial use of the Site (>100 years) plus the absence of any proposed soft standing on-Site, the preliminary assessment suggests that the risks posed by in situ land quality to human health and controlled waters receptors are likely to be **low to moderate/low.**

Recommendations / Next Steps

No immediate action but observe a watching brief

It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing of soil samples) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities and associated ground works (which would include a thorough inspection of any exposed sub surface soils/Made Ground) would likely be sufficient.

Note: it is presumed from available development plans that the existing basement will remain uninhabited. Should future use of the Site include a habitable basement (i.e. sleeping accomodation), it is recommended that further assessment of the residual vapour risks posed by the local ground conditions is recommended. This could include ambient air / vapour sampling and testing within the existing on-Site basement.

1. Introduction

1.1 Background

The study site (from herein known as 'the Site') is situated at 1 Elgar Road in Reading, RG2 0BH. A location plan of the Site is shown in Section 1.5. A proposed development plan of the Site is shown in Section 1.6.

GeoSmart was commissioned by Ishaivanee Vadivel in July 2025 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested in order to support a proposed planning application for the Site.

The proposed development is for the conversion of the existing property into four 1 and 2 bed self-contained residential flats including a first floor rear extension, dormer extensions, associated internal reconfiguration and minor external alterations.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 3.4 for details.

1.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

1.3 Report contents

This report is divided into two sections, as described below:

Section	Content	Purpose
Section 2: **LAND QUALITY ASSESSMENT**	A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations	To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present
Section 3: **SUPPORTING INFORMATION**	A collection of site specific information on which the land quality assessment is based	To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments

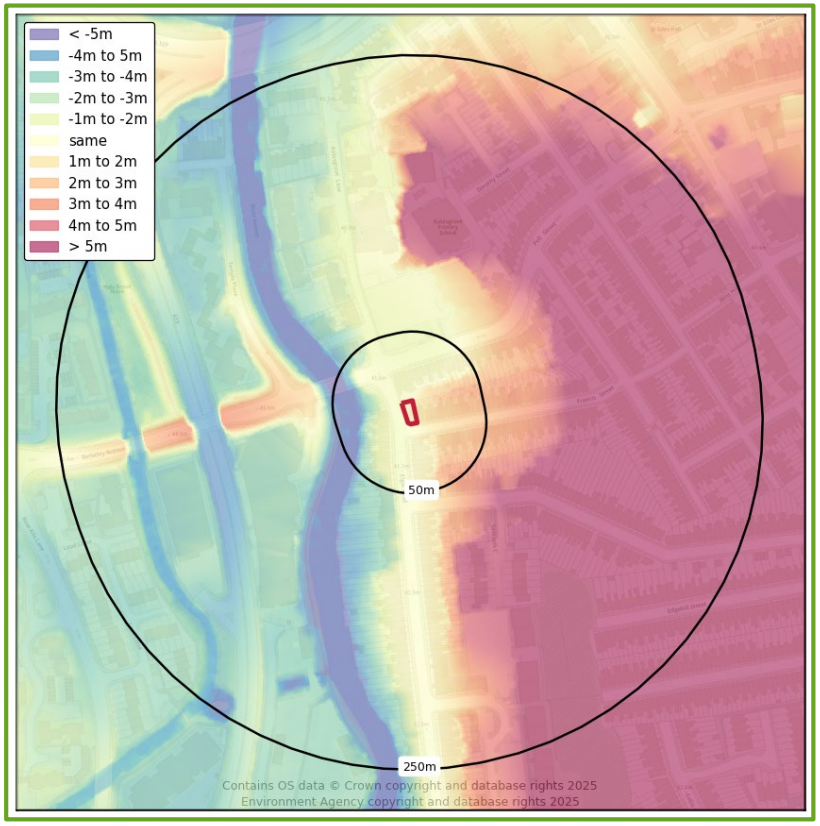

1.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

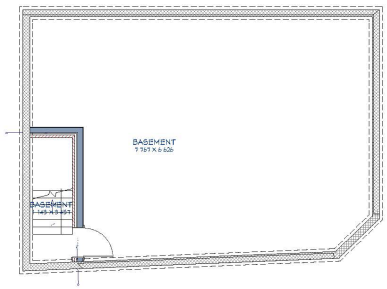

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

2. Land quality assessment

2.1 Site details

Site name:	1 Elgar Road	Current land cover:	Building cover (100%)
Current use:	Mixed commercial (retail) / residential development		
Proposed use:	Residential flats	Site area:	0.02 ha

2.2 Conceptual understanding (potential sources of contamination)

Site history
(historical land use taken within 250m radius of the Site boundary)

Date	Description of land use On-Site	Off-Site
1879	The Site is partially developed, with an undefined building mapped in the northern part of the Site. The Site is appears to form part of the adjacent Katesgrove Kilns site (fabrication of bricks, tiles and drain pipes).	Residential properties are mapped across the land to the north of the Site. The Katesgrove Kilns site (fabrication of bricks, tiles and drain pipes) including assorted light industrial buildings is directly south of the Site. Some modest excavations are shown c. 50 m south with the main brickfield mapped c. 150 m south-east. The River Kennet is mapped c. 30 m west. A timber yard is mapped c. 100 m northwest and an iron works is c. 130 m northwest (both on the opposite side of the river from the study Site).
1879 (historical town plan)	No changes on-Site.	A clay mill associated with the Katesgrove Kilns is mapped c. 60 m east.
1883	No discernible changes.	

POTENTIAL **SOURCES** OF CONTAMINATION

Source description

The land use history suggests that there is the potential for contamination to have occurred on-Site relating to the following:

Commercial (retail):
- Potential storage of fuels and/or miscellaneous chemicals.
- Miscellaneous small scale fuel and chemical spills.
- Made Ground associated with former development/demolition activities.
- Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface.

(continued overleaf)

LIKELY

PROBABILITY OF CONTAMINATION

2.2 Conceptual understanding (potential sources of contamination)

Site history
(historical land use taken within 250m radius of the Site boundary)

Date	Description of land use	
	On-Site	Off-Site
1899	The building in the north of the Site is no longer mapped, and a new undefined (likely residential) building is mapped across the majority of the Site.	The Katesgrove Kilns site has been cleared and the local area redeveloped with terraced residential housing. A public house is mapped c. 15 m north. The former timber yard c. 100 m northwest appears to no longer be mapped.
1900	No discernible changes.	
1901	No discernible changes.	
1912	A further structure appears to have been erected in the northwest corner of the Site.	No discernible changes.
1913 - 14	No discernible changes.	
1931 - 32	No discernible changes.	Extensive redevelopment has occurred c. 100m to the west of the Site (beyond the R Kennet) including rail lines and a saw mill.
1933	No discernible changes.	
1938	No discernible changes.	
1948 (historical aerial image)	No discernible changes.	
1958	The configuration of the on-Site building appears to have changed, indicating there may have been a period of demolition/construction or alterations to the building.	A depot is mapped c. 90 m southwest (beyond the R Kennet).

POTENTIAL **SOURCES** OF CONTAMINATION

Source description

The land use history suggests that there is the potential for contamination to have occurred on and off-Site relating to the following:

Residential:
- Miscellaneous small scale fuel or chemical spills relating to domestic land-uses (i.e., fuels used for garden machinery, herbicides, paints/creosote, detergents, etc.).
- Potential for localised/historical deposition of residential waste materials (ash, litter, packaging, etc.).
- Made Ground/demolition waste materials associated with demolition of the residential buildings.

Kilns / brickworks:
- Potential for bulk storage of fuels and/or miscellaneous chemicals, including oils and lubricants.
- Spillage or leakage of fuels and chemicals from bulk containers or during operation (e.g. metal oxides, plasticisers, enamelling materials).
- Potential for localised deposition of kiln ash, brick and workshop wastes.

It is noted that the significant time that has elapsed since operation of the kilns (>100 years) may constrain any risks to future Site users.

The land use history suggests that there is the potential for contamination to have occurred off-Site relating to the following:

Timber yard:
- Potential for bulk storage of fuels and/or miscellaneous chemicals.
- Spillage and leakage of liquid chemicals used in treatment processes.

(continued overleaf)

LIKELY

PROBABILITY OF CONTAMINATION

2.2 Conceptual understanding (potential sources of contamination)

Site history
(historical land use taken within 250m radius of the Site boundary)

Date	Description of land use	
	On-Site	Off-Site
1962	No discernible changes.	
1963 - 69	No changes on-Site.	An electricity substation is mapped c. 80 m west (to the west of the R Kennet). The depot c. 70 m southwest is now mapped as case and pallet works.
1971	No changes on-Site.	A garage is mapped c. 90 m northwest. An electricity substation is mapped c. 110 m south-east.
1972	No discernible changes.	
1973	No discernible changes.	
1976 (partial map)	*The Site is not within the available mapping extent.*	Warehouses are mapped from c. 100 m to the south.
1979	No discernible changes.	
1981 - 82 (partial map)	*The Site is not within the available mapping extent.*	No discernible changes off-Site.
1986 - 87 (partial map)	No changes on-Site.	The garage c. 90 m northwest is no longer mapped. The remainder of the original Katesgrove Kilns site (c. 200 m south of the Site) has been redeveloped.
1990	No discernible changes.	
1991 - 92 (partial map)	No discernible changes.	
1993 - 1995	No discernible changes.	
1996 (partial map)	No discernible changes.	

POTENTIAL **SOURCES** OF CONTAMINATION

Source description

- Disposal of waste products.
Note: given that the timber yard was positioned on the opposite side of the R Kennet, this feature is considered unlikely to pose any contamination risks to the study Site.

Public house:
- Miscellaneous small scale fuel or chemical spills associated with ad hoc commercial activities.
- Potential for localised/historical deposition of domestic/commercial wastes.
- Made Ground associated with former development/demolition activities.
- Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.

Industrial land (including assorted depot and works):
- Potential for bulk storage of fuels and/or miscellaneous chemicals.
- Miscellaneous fuel and chemical spills or leaks (i.e., fuels used for heating & powering machinery/vehicles, oils and lubricants, paints/thinners, degreasers, etc.).
- Miscellaneous material storage.
- Potential for Made Ground.
- Potential for localised deposition of boiler ash/coke and other industrial combustion wastes and by-products.
- Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.

(continued overleaf)

LIKELY

PROBABILITY OF CONTAMINATION

2.2 Conceptual understanding (potential sources of contamination)

Site history *(historical land use taken within 250m radius of the Site boundary)*	Date	Description of land use On-Site	Off-Site	POTENTIAL **SOURCES** OF CONTAMINATION	Source description	**PROBABILITY** OF CONTAMINATION
	1999	No changes on-Site.	The public house c. 15 m north appears to no longer be mapped.		**Electricity substations (c. 1960s/1970s):** - Potential for Polychlorinated Biphenyls (PCB) contamination to have occurred. The identified electricity substation were constructed before 1980, therefore it is possible that PCBs may be present as the use of PCBs ceased in the late 1970s.However, as the substations are located at a reasonable distance to the Site (> 50 m), this potential source will not be carried forward into the risk assessment.	**LIKELY**
	1999 (aerial image)	No discernible changes.				
	2006	No discernible changes.				
	2024	No discernible changes.				
	2025	No discernible changes.				
Additional information	Aerial imagery between 2003 - 2025 indicates no significant changes have occurred on or in the immediate vicinity of the Site. However, the works c. 70 m west were demolished and cleared in c. 2017, and new multi-storey buildings constructed between 2018 - 2020.					

2.2 Conceptual understanding (potential sources of contamination)

<table>
<tr>
<td>Current land use</td>
<td>The Site is currently used in a mixed residential / commercial capacity as an end-of-terrace property (including a basement level) with Use Class E at ground floor (convenience store) and C3 above.

There are no known buried storage tanks at the Site.

There is no known bulk fuel or chemical storage on Site.</td>
<td rowspan="2">POTENTIAL SOURCES OF CONTAMINATION</td>
<td>The Site's current use is unlikely to have given rise to significant land contamination.</td>
<td>UNLIKELY</td>
<td rowspan="2">PROBABILITY OF CONTAMINATION</td>
</tr>
<tr>
<td>Neighbouring industrial land uses
(see environmental data report in Section 3.3 for full listing)</td>
<td>There are one or more potentially contaminative land uses are located within 250 m of the Site:

</table>
</td>
<td>Despite the presence of potential contaminative activities in the area surrounding the Site, since none occur within close proximity (i.e., within a 50 m radius of the Site) they are unlikely to pose a significant contamination hazard in relation to the Site itself.

Contemporary trade directory entries include:
- Keyline Civils Specialist / Keyline Builders Merchants c. 80 m south. Status: inactive. Two (2) entries.

- Contract Ironing (ironing & home laundry services) c. 100 m northwest. Status: inactive.

Records of Licensed Discharge Consents include:
- The Occupier of 5/9 Berkeley Avenue c. 175 m southwest. Type: sewage discharges - final/treated effluent - not water company. Status: lapsed (under Environmental Act 1995, Schedule 23). Revocation date: 1996.</td>
<td>UNLIKELY</td>
</tr>
</table>

2.2 Conceptual understanding (potential sources of contamination)

EA recorded pollution incidents *(see environmental data report in Section 3.3 for full listing)*	One or more Environment Agency pollution incidents to controlled waters have been recorded within 250 m of the Site. These include: An incident occurred in 1990 c. 110 m northwest of the Site. The pollutant was unknown chemicals (cause not given) and the incident was categorised as significant. An incident occurred in 1994 c. 135 m south of the Site. The pollutant was unknown / miscellaneous (cause not given) and the incident was categorised as minor. An incident occurred in 1995 c. 140 m southwest of the Site. The pollutant was unknown / miscellaneous (cause not given) and the incident was categorised as minor. An incident occurred in 1996 c. 180 m west of the Site. The pollutant was miscellaneous / other (cause not given) and the incident was categorised as minor. An incident occurred in 1995 c. 180 m west of the Site. The pollutant was miscellaneous / unknown (cause not given) and the incident was categorised as minor. An incident occurred in 1996 c. 215 m south of the Site. The pollutant was oils (other) (cause not given) and the incident was categorised as minor.	POTENTIAL **SOURCES** OF CONTAMINATION	Given the scale, timing, location and nature of the recorded incidents these past events do not appear to pose a significant contamination hazard to the Site.	**LOW LIKELI-HOOD**	**PROBABILITY** OF CONTAMINATION
Landfills / waste sites *(taken within 500m radius of the Site boundary, see environmental data report in Section 3.3 for full listing)*	There are no BGS recorded landfills located within 500 m of the Site. There are no Environment Agency listed historical landfills located within 500 m of the Site. There are no registered landfills located within 500 m of the Site. There are no Local Authority listed historical landfills located within 500 m of the Site.		Given the absence of any historical or operational landfills within close proximity of the Site no associated contamination hazards have been identified.	**LOW LIKELI-HOOD**	

2.2 Conceptual understanding (potential sources of contamination)

 Landfills / waste sites *(taken within 500m radius of the Site boundary, see environmental data report in Section 3.3 for full listing)*	The following areas of potentially infilled land are recorded within 250 m of the Site: Unknown filled ground, classified as 'non-water', was recorded on Site in 1995. *It is noted that this cannot be identified on the available historical mapping.* Unknown filled ground, classified as 'water', was recorded c. 110 m west of the Site in 1900. Unknown filled ground, classified as 'water', was recorded c. 210 - 220 m south/southwest of the Site in 1913, 1962 and 1883. four (4) entries. Unknown filled ground, classified as 'water', was recorded c. 235 - 250 m west of the Site in 1883. Two (2) entries. The following other waste sites are registered within 250 m of the Site: 0 Records of registered waste transfer sites. 0 Records of registered waste treatment or disposal sites. 0 Records of licenced waste management facilities.	POTENTIAL SOURCES OF CONTAMINATION	Potentially infilled land has been identified on-Site and within the local area; this appears to relate to the historical presence of the Katesgrove Kilns site (including associated clay / brick pits). Following a review of available historical mapping, it appears that no major excavations were performed within 50 m of the Site. The reference on BGS mapping to the presence of worked ground (void) to the south of the Site may suggest the absence of any widespread infilling within this area. It is also noted that the area within 100 m to the south of the Site was redeveloped for housing prior to 1899, indicating that any infill materials located within this area will have been present for over 125 years. Note: given the reasonable distances to the off-Site areas of infilled ground (> 100 m) and the time that has elapsed since potential infilling ceased, it is less likely that appreciable quantities of ground gas and leachate will continue to be produced at these site. Given the absence of any waste treatment, transfer or disposal sites within close proximity of the Site no associated contamination hazards have been identified.	**LOW LIKELI-HOOD**	PROBABILITY OF CONTAMINATION

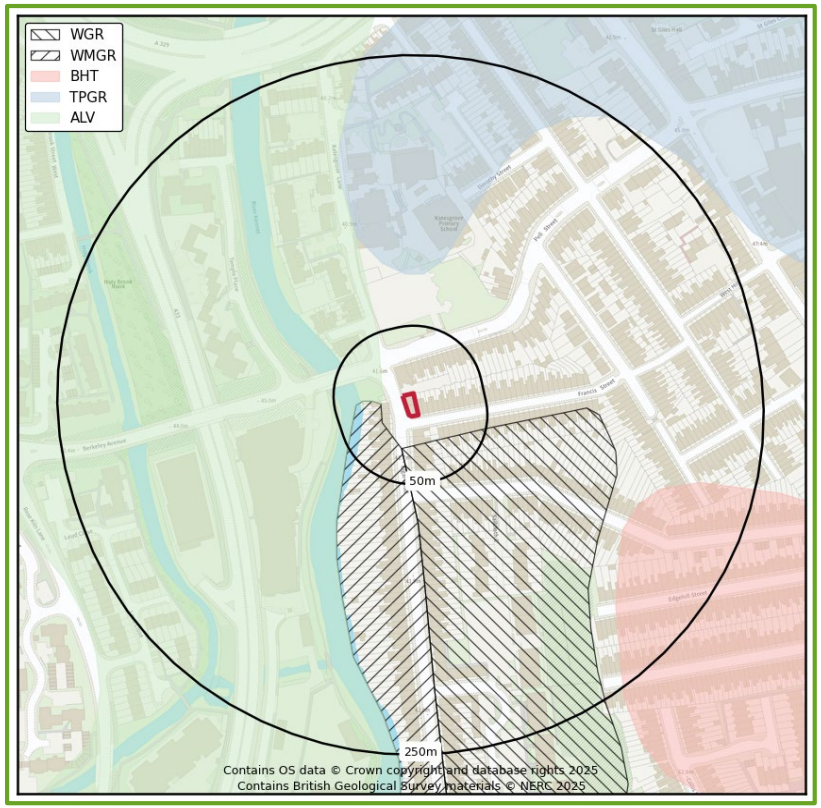

2.2 Conceptual understanding (potential sources of contamination)

Rn Radon *(see environmental data report in Section 3.3 for full listing)*	According to current UK radon mapping the Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).	POTENTIAL **SOURCES** OF CONTAMINATION	<1% of homes are at or above the UK radon action level (200 Bq/m3).	**UNLIKELY**	**PROBABILITY** OF CONTAMINATION

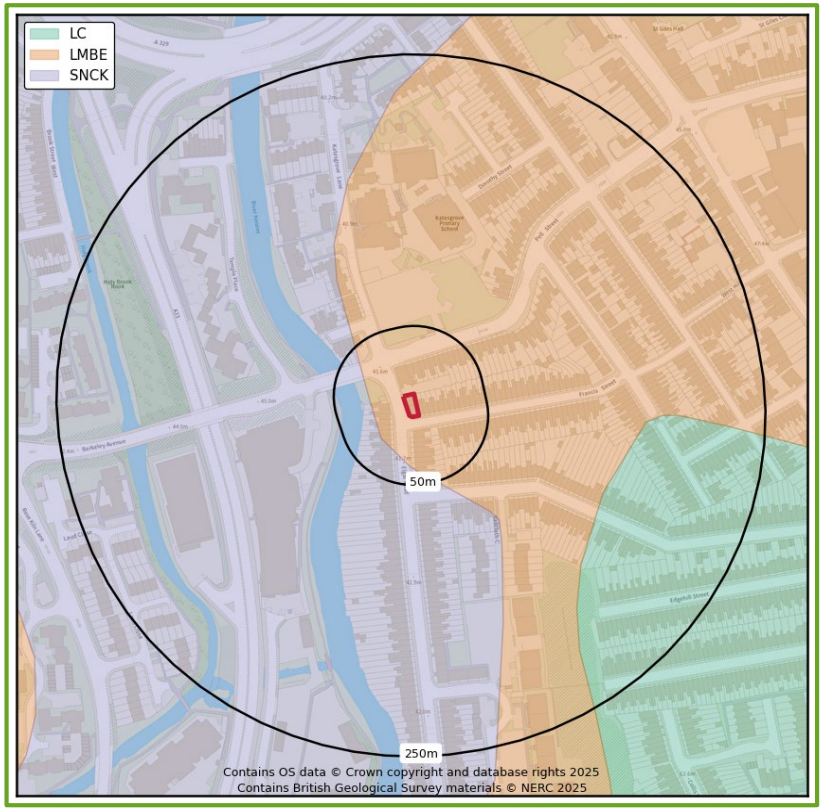

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

Geology and Groundwater *(see the environmental data report in Section 3.3 for full details)*	British Geological Survey mapping indicates the absence of any superficial deposits beneath the Site. *It is noted that artificial deposits (infilled ground) are mapped c. 20 m west of the Site, and worked ground (void) is mapped c. 35 m south.* British Geological Survey mapping indicates that the bedrock geology consists of the Lambeth Group (LMBE) which comprises of clay, silt and sand and is classified as a Secondary (A) Aquifer. According to the GeoSmart Groundwater Flood Risk (GW5) Map (GeoSmart, 2024). The risk of groundwater flooding at the Site is 'negligible'. The Site does not lie within a groundwater Source Protection Zone (SPZ). There are no groundwater abstraction licences within 250 m of the Site.	POTENTIAL **RECEPTORS**	A Secondary (A) Aquifer comprises permeable layers capable of supporting water supply at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment is not considered necessary for the Site. The depth to groundwater beneath the Site is unknown. The absence of any groundwater abstractions does not necessarily indicate a low resource potential. Small scale abstractions, such as for private water supplies, may not be listed.	**MEDIUM**	**POTENTIAL SEVERITY** OF IMPACT

Superficial Geology (BGS, 2025)

Bedrock Geology (BGS, 2025)

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

Geohazards *(see the environmental data report in Section 3.3 for full details)*	The Site does not lie within a 'Coal Mining Reporting Area'. There are no brine affected areas within 75 m of the Site. The following are located within 500 m of the Site: - Katesgrove Kilns, a former opencast mine where common clay and shale was extracted from Lambeth Group, is located c. 55 - 370 m south / southeast of the Site. Five (5) entries. - Ivy Bridge Brick Field, a former opencast mine where common clay and shale was extracted from HEAD (brickearth) deposits, is located c. 255 - 310 m southeast of the Site. Two (2) entries. - Reading Chalk Mine, a former underground mine where chalk was extracted from Seaford Chalk Formation, is located c. 415 - 500 m west / northwest. Fourteen (14) entries. - Coley Pottery / Kilns, a former opencast mine where common clay and shale was extracted from Lambeth Group, is located c. 440 - 495 m west / southwest. Three (3) entries. - Mining instability (as a result of conclusive rock mining) has been recorded on-Site. - Man-made mining cavities for chalk have been recorded between c. 20 - 460 m of the Site. Thirteen (13) entries. - Natural cavities for chalk (Lambeth Group) have been recorded between c. 205 - 500 m of the Site. Fourteen (14) entries.	POTENTIAL **RECEPTORS**	The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues. The Site does not lie within an area of former brine working and is therefore unlikely to be affected by related ground stability issues. Multiple mineral sites are recorded within the local area; however, most of the identified sites, with the exception of the Katesgrove Kilns, are located an appreciable distance from the Site. The Site is mapped within an area of historical iron ore mining. Both man-made and natural cavities have been identified within 500 m of the Site.	**MEDIUM**	**POTENTIAL SEVERITY** OF IMPACT

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

 Geohazards *(see the environmental data report in Section 3.3 for full details)*	Artificial ground / Made Ground is anticipated on Site. The following natural hazards are present at or within 50 m of the Site: Compressible ground deposits Ground dissolution Shrinking or swelling clay	POTENTIAL **RECEPTORS**	BGS GeoIndex Onshore mapping does not have any artificial deposits recorded at the Site. However, infilled ground is mapped c. 20 m west of the Site. In addition, the Envirocheck data report includes reference to unknown filled ground beneath the Site and surrounding land. Furthermore, historical demolition / redevelopment works have occurred on-Site, which may have given rise to local Made Ground. The Site has ground stability hazards that should be considered further as part of the redevelopment plans.	**MEDIUM**	**POTENTIAL SEVERITY** OF IMPACT

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

Surface water *(see the environmental data report in Section 3.3 for full details)*	The nearest water feature is the River Kennet, located c. 30 m to the west of the Site. The Site lies within a Flood Zone 1 (low probability). There are no surface water abstraction licences within 250 m of the Site.	**POTENTIAL** RECEPTORS	The relatively close proximity of the identified surface water feature(s) suggests that a potential linkage could occur if any contamination were present on Site. Mobile contamination may potentially enter nearby water features via any shallow groundwater or possibly via preferential flow pathways such as buried services.	**MILD**	**POTENTIAL SEVERITY** OF IMPACT
Environmental designations *(see the environmental data report in Section 3.3 for full details)*	There are no environmentally sensitive land uses within 250 m of the Site.		No relevant environmentally designated sites/receptors have been identified.	**NEGLIGIBLE**	
Human receptors	Proposed residents/users of the Site.		Human receptors are proposed to be present on Site.	**SEVERE**	

2.4 Regulator perspective

Consultation date	7th July 2025	Reading Borough Council
GeoSmart consultant	Emilia Dončić	Catherine Lewis
Consultation outcome	The Council did not respond to GeoSmart within the time frame of this report.	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
On-Site sources: - Potential for Made Ground plus some historically infilled ground - Commercial / retail land use								
1	Potential for **inorganic** and low volatility organic contaminants to be present within the subsurface **soils**	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classifications reflect the potential presence of Made Ground / some infilled ground which may have given rise to localised inorganic and low volatility organic contamination. However the absence of any proposed softstanding on-Site will constrain routine exposure to any subsurface contamination. It would be prudent to ensure any new water supply was installed in clean fill trenches utilising barrier pipework as a precaution.
2		Consumption of home grown produce	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
3		Ingress into water supply pipework and subsequent water ingestion	HH		**MEDIUM**	**LOW LIKELIHOOD**	**MODERATE/LOW RISK**	
4		Building materials in direct contact with aggressive ground	PROP	Future Site buildings	**MEDIUM**	**UNLIKELY**	**LOW RISK**	Given the potential presence of Made Ground beneath the Site, it would be prudent to verify the underlying ground condition to inform future building designs.

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
5	Potential for **inorganic** and low volatility organic contaminants to be present within the subsurface **soils**	Dissolution into pore water/shallow groundwater and subsequent migration	CW	Lambeth Group (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The potential presence of Made Ground / some infilled ground may have given rise to some localised contamination which could potentially impact on the bedrock aquifer and nearby watercourse. However, it is noted that the Site occupies a modest area, which will be entirely covered by hard standing. The Site does not reside within a mapped SPZ and there are no licensed groundwater or surface water abstractions recorded within 250 m of the Site.
6		Dissolution into pore water/shallow groundwater and subsequent lateral migration	CW	River Kennet (c. 30 m west)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
7		Dissolution into aqueous phase and preferential migration via drainage structures	CW		**MEDIUM**	**UNLIKELY**	**LOW RISK**	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
8	Potential for **volatile organic** contaminants to be present within the subsurface **soils**	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classifications reflect the likely absence of any significant sources of volatile organic contamination based on the known Site history (including the absence of any light industrial activity on and around the Site for over 100 years). The risks will also be constrained by the absence of any proposed softstanding on-Site. Note: the Client has confirmed the absence of any bulk fuel or chemical storage on-Site and it is also assumed from available development plans that the existing basement will remain uninhabited.
9		Consumption of home grown produce	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
10		Ingress into water supply pipework and subsequent water ingestion	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
11		Migration of vapours to surface; inhalation indoors	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
12		Migration of vapours to surface; inhalation outdoors	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
13		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Lambeth Group (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classifications reflect the likely absence of any significant sources of volatile organic contamination based on the known Site history. It is also noted that the Site occupies a modest area, which will be entirely covered by hard standing. In addition, the Site does not reside within a mapped SPZ and there are no licensed groundwater abstractions recorded within 250 m of the Site.
14		Dissolution into pore water/shallow groundwater and subsequent migration	CW	River Kennet (c. 30 m west)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
15		Dissolution into aqueous phase and preferential migration via drainage structures	CW		**MEDIUM**	**UNLIKELY**	**LOW RISK**	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
16	Potential for **asbestos** containing materials within the subsurface **soils**	Liberation of sub surface ACMs and inhalation of asbestos fibres	HH	Future Site occupants	**MEDIUM**	**UNLIKELY**	**LOW RISK**	Given the potential presence of Made Ground / some infilled ground local to the Site, it is possible that ACMs may occur within the sub surface. However the absence of any proposed softstanding on-Site will significantly constrain routine exposure to any subsurface contamination.
17	Potential for **dissolved phase** contaminants to be present within **shallow groundwater**	Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Lambeth Group (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classifications reflect the likely absence of any significant sources of dissolved phase contamination.
18		Lateral and vertical groundwater movement via natural or artificial flow paths	CW	River Kennet (c. 30 m west)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
19	Potential for elevated **methane** to be present within the sub-surface **soils**	Lateral and vertical migration into on-Site buildings; potential to cause an explosion	HH	On-Site properties and their occupants	**SEVERE**	**UNLIKELY**	**MODERATE/LOW RISK**	Based on the prevailing conceptual understanding an appreciable gas source is considered unlikely. Despite a record of possible infilled ground below the Site, this is not supported by available historical mapping, which indicates the absence of any appreciable excavations (and thus infilling) within 50 m of the Site.
20		Lateral migration towards off-Site buildings; potential to cause an explosion	HH	Off-Site properties and their occupants	**SEVERE**	**UNLIKELY**	**MODERATE/LOW RISK**	
21	Potential for elevated **carbon dioxide** to be present within the subsurface **soils**	Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation	HH	Occupants of on-Site buildings	**SEVERE**	**UNLIKELY**	**MODERATE/LOW RISK**	
22		Lateral migration towards off-Site buildings; potential to cause asphyxiation	HH	Occupants of off-Site buildings	**SEVERE**	**UNLIKELY**	**MODERATE/LOW RISK**	
23	Potential for **radon** within the subsurface	Lateral migration towards on-Site buildings; potential to cause long term health effects	HH	Occupants of on-Site buildings	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The Site lies in an area where <1% of homes are at or above the UK radon action level (200 Bq/m3).
					OVERALL RISK RATING *(on-Site sources)*		**LOW to MODERATE/LOW RISK**	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
Off-Site sources: - The former Katesgrove Kilns site (fabrication of bricks, tiles and drain pipes). - Potential for Made Ground plus some historically infilled ground. - Former public house c. 15 m north.								
24	Potential for both **inorganic** and **volatile organic** contaminants to be present within the subsurface **soils**	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Future Site occupants	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The former public house was located a modest distance from the Site and is considered unlikely to have given rise to any significant ground contamination. The former Katesgrove Kilns site may have given rise to assorted land contamination. However, the impacts of any such contamination will be constrained by the time that has elapsed since operation of the kilns / brickworks (>100 years) as well as the absence of any proposed softstanding on-Site.
25		Consumption of home grown produce	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
26		Ingress into water supply pipework and subsequent water ingestion	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
27		Migration of vapours to surface; inhalation indoors	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
28		Migration of vapours to surface; inhalation outdoors	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
29	Potential for elevated **methane** to be present within the sub-surface **soils**	Lateral and vertical migration into on-Site buildings; potential to cause an explosion	HH	On-Site properties and their occupants	**MEDIUM**	**UNLIKELY**	**LOW RISK**	Potentially infilled land has been identified within the local area; this appears to relate to the historical presence of the Katesgrove Kilns site (including associated clay / brick pits). the available historical mapping suggests that no major excavations were performed within 50 m of the Site and the reference on BGS mapping to the presence of worked ground (void) to the south of the Site may suggest the absence of any widespread infilling within this area. It is also noted that the area within 100 m to the south of the Site was redeveloped for housing prior to 1899, indicating that any infill materials located within this area will have been present for over 125 years. Given the reasonable distances to the off-Site areas of infilled ground (> 100 m) and the time that has elapsed since potential infilling ceased, it is less likely that appreciable quantities of ground gas and leachate will continue to be produced at these sites.
30	Potential for elevated **carbon dioxide** to be present within the subsurface **soils**	Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation	HH	Occupants of on-Site buildings	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
						OVERALL RISK RATING *(off-Site sources)*	**LOW RISK**	

2.6 Next Steps

✓	**No immediate action but observe a watching brief**	GeoSmart Information	Given the potential presence of Made Ground / infilled ground beneath the Site it is possible that some residual contamination is present within the sub surface. However, given the time that has elapsed since former light industrial use of the Site (>100 years) plus the absence of any proposed soft standing on-Site, the preliminary assessment suggests that the risks posed by in situ land quality to human health and controlled waters receptors are likely to be **low to moderate/low.** It is noted that whilst a limited intrusive site investigation (including appropriate laboratory testing of soil samples) could be adopted in order to validate the preliminary risk assessment conclusions, a watching brief during all proposed redevelopment activities will likely be sufficient. *Note: it is presumed from available development plans that the existing basement will remain uninhabited. Should future use of the Site include a habitable basement (i.e. sleeping accomodation), it is recommended that further assessment of the residual vapour risks posed by the local ground conditions is recommended. This could include ambient air / vapour sampling and testing within the existing on-Site basement.* The watching brief should be maintained throughout the entire development phase of works and any possible evidence of contamination encountered during the redevelopment works should be alerted to the Local Authority. Appropriate actions would then be required to further inspect, sample and analyse any suspect materials, and formulate an appropriate remediation plan, as necessary.

3. Supporting Information

The following supporting information is contained in this section:

Section	Content
3.1	Referenced materials used in the EnviroSmart reporting
3.2	Site photographs
3.3	Published environmental data records (Landmark Envirocheck report 1 Elgar Road, Reading, RG2 0BH REF: 380794334_1_1) including: • Aerial photographs and site map • Environmental permits, incidents and registers • Landfill and other waste sites • Current land use information • Geology • Hydrogeology and hydrology • Flooding • Designated environmentally sensitive sites • Other environmental factors
3.4	Risk assessment methodology
3.5	Historical land use maps

Disclaimer

This report has been prepared by GeoSmart in its professional capacity as soil and water specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by GeoSmart solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to GeoSmart at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, GeoSmart may, by prior written agreement, agree to such release, provided that it is acknowledged that GeoSmart accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. GeoSmart accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against GeoSmart except as expressly agreed with GeoSmart in writing.

Important consumer protection information

This search has been produced by GeoSmart Information Limited, Suite 9-11, 1st Floor, Old Bank Buildings, Bellstone, Shrewsbury, SY1 1HU.
Tel: 01743 298100
Email: info@geosmartinfo.co.uk

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code

• provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
• sets out minimum standards which firms compiling and selling search reports have to meet
• promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals
• enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.
By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:
• display the Search Code logo prominently on their search reports
• act with integrity and carry out work with due skill, care and diligence
• at all times maintain adequate and appropriate insurance to protect consumers
• conduct business in an honest, fair and professional manner
• handle complaints speedily and fairly
• ensure that products and services comply with industry registration rules and standards and relevant laws
• monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award up to £5,000 to you if the Ombudsman finds that you have suffered actual financial loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the Code.
Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs contact details:

The Property Ombudsman scheme
Milford House
43-55 Milford Street
Salisbury
Wiltshire SP1 2BP
Tel: 01722 333306
Fax: 01722 332296
Email: admin@tpos.co.uk

You can get more information about the PCCB from www.propertycodes.org.uk

Please ask your search provider if you would like a copy of the search code

Complaints procedure

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly. If you want to make a complaint, we will:

- Acknowledge it within 5 working days of receipt.
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
- Provide a final response, in writing, at the latest within 40 working days of receipt.
- Liaise, at your request, with anyone acting formally on your behalf.

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs): Tel: 01722 333306, E-mail: admin@tpos.co.uk.

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision. Complaints should be sent to:

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

3.4 Risk assessment methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

Classification	Definition
High likelihood	There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term.
Low likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.

Table B: Classification of consequence

Classification	Receptor	Definition	Examples
Severe	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance	High concentrations of cyanide on the surface of an informal recreation area
	Controlled waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource	Major spillage of contaminants from site into controlled water
	Property	Catastrophic damage to buildings/property	Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied)
	Ecology	A short-term risk to a particular ecosystem, or organism forming part of such eco-system	Potentially long term derogation of a designated site or protected species
Medium	Humans	Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)	Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria
	Controlled waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)	Leaching of contaminants from a site to a principal or secondary aquifer
	Property	Significant damage to crops, buildings, structures and services	Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability)
	Ecology	A significant change in a particular ecosystem	Death of a species within a designated nature reserve

Table B: Classification of consequence (continued)

Classification	Receptor	Definition	Examples
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk	Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria
	Controlled waters	Pollution of non-water resources	Pollution of non-classified groundwater
	Property	Damage to sensitive buildings/structures/services	Aggressive ground conditions leading to potential for long term degradation of buried concrete
	Ecology	Damage to the environment	Localised damage to aquatic habitat causing temporary relocation of certain species
Minor	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc.)	The presence of contaminants at such concentrations that protective equipment is required during site works
	Controlled waters	Potential minor release of contamination to local water features	Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality
	Property	Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve	The loss of plants in a landscaping scheme. Discolouration of concrete
	Ecology	Short term, localised damage may occur; consequences are spatially and temporally limited	Short term or localised disruption to in situ flora or fauna; no lasting effects

Table C: Risk classification (comparison of consequence and probability)

Probability	Consequence (severity): Severe	Medium	Mild	Minor
High likelihood	Very high risk	High risk	Moderate risk	Low risk
Likely	High risk	Moderate risk	Moderate/low risk	Low risk
Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

Risk Key

Very High	High	Moderate	Moderate/Low	Low	Very Low
There is a high probability that severe harm could arise to a designated receptor from an identified hazard without appropriate remediation action	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action	It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely any harm would be mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild	The presence of an identified hazard does not give rise to the potential to cause harm to a receptor

Published 1883

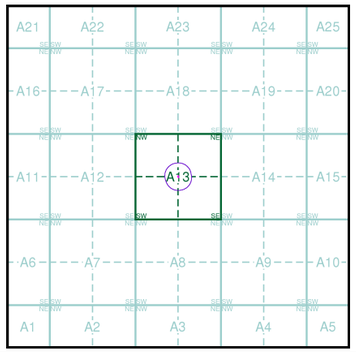

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

GeoSmart Information

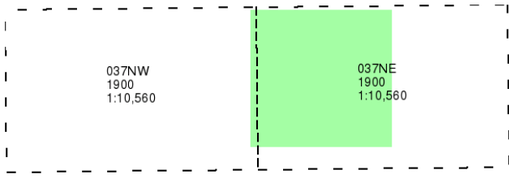

Berkshire

Published 1938

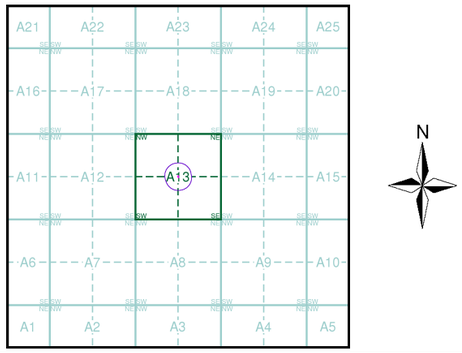

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

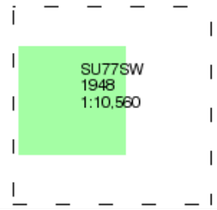

Published 1948

Source map scale - 1:10,560

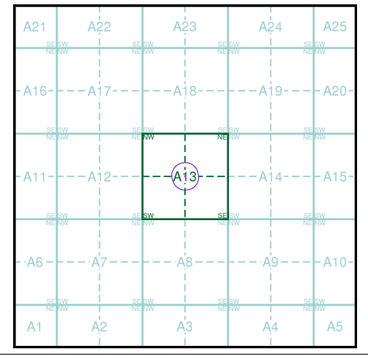

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Reading

Published 1990

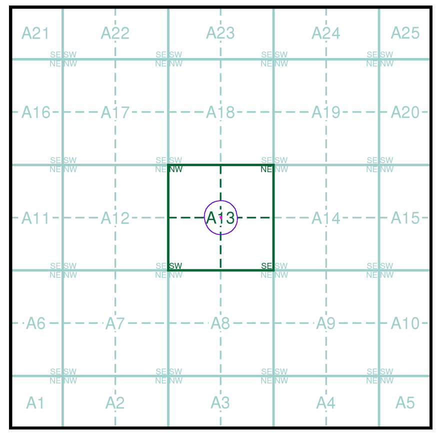

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2024

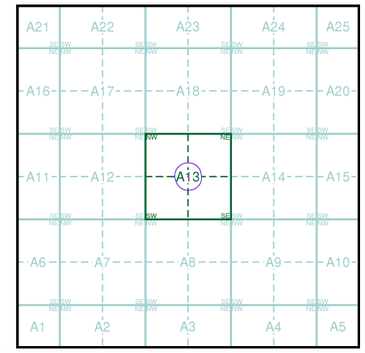

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Ordnance Survey Plan

Published 1958

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1993

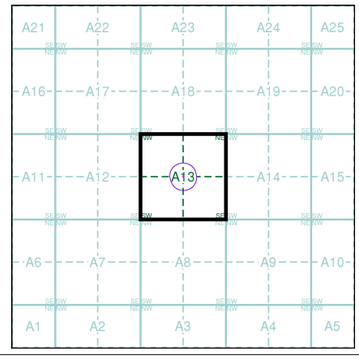

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

GeoSmart Information

Berkshire

Published 1879

Source map scale - 1:500

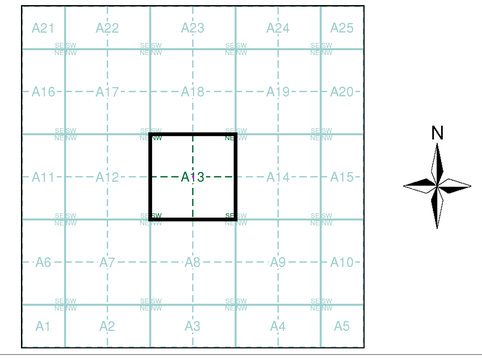

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.
