1 Executive summary

1.1 General

1.1.1 We recommend the following executive summary is not read in isolation to the main report which follows.

1.1.2 *Due to an elapsed period of 3 years the Preliminary Investigation Report has been reviewed to account for:*

- a) *Changes in guidance and industry practice*
- b) *Accommodate for activities on site and the surrounding area during the lapsed time period*
- c) *Minor changes in development proposals*

1.2 Site description, history and development proposals

1.2.1 The site is located in the centre of Reading at the junction of Eaton Place and Oxford Road. At time of initial reporting (2019 to 2023) a two to three storey commercial L-shaped premises occupies the southern and eastern quadrants of the site. A three level semi-basement car park occupies the northwest quadrant and the remaining open space comprises hardstandings used for car parking with limited soft landscaping with semi-mature trees.

1.2.2 *At time of the latest report revision (2026) enabling works had commenced including the stripping out of the existing office buildings and partial demolition.*

1.2.3 A review of historical Ordnance Survey maps indicates the site was occupied by residential dwellings in the west half of the site and open space in the east from 1879 up to 1957, when a warehouse was constructed in the east half of the site. In 1962 a warehouse was constructed in the west half of the site. In 1993 both warehouses were demolished and replaced with the existing building. The surrounding land has been predominantly residential, except a works adjoining the site to the north from 1957 to 1993.

1.2.4 We understand the scheme comprises:
“Change of use and redevelopment of the ground, first and second floors of the building from Class E (offices) to C3 (dwelling houses) to comprise 40 x1 bedroom and 12 x2 bedroom dwelling units.”

Along with a 2-storey roof extension to accommodate 15 further dwellinghouses. Along with car parking, cycle parking and associated landscaping, amenity space, plant and refuse areas, and access arrangements

The proposed works will comprise partial demolition of existing office blocks and redevelopment.

1.2.5 *The updated proposed development layout is presented in Appendix E.*

1.3 Ground conditions

- 1.3.1 Based on published records, the likely sequence of soils underlying the site is as follows:

Summary of geology and likely aquifer containing strata						
Strata	Bedrock or superficial	Approximate thickness	Typical soil type	Likely permeability	Aquifer designation	
Taplow Gravel Formation	Superficial	3.5m – 6.1m	Sands and Gravels	Permeable	Secondary	A
White Chalk Subgroup	Bedrock	200m	Chalk	Permeable	Principal	aquifer
Table 1.3.1						

1.4 Preliminary engineering appraisal

- 1.4.1 It is likely, due to the scale of proposals, that a piled foundation will be required, bearing onto the White Chalk Subgroup at depth. It is likely that chalk will be encountered from ~6.0m, with water possibly present at ~6.5m based on historic borehole records.
- 1.4.2 There are records of historic chalk mining and dissolution features in close proximity to the site. It is critically important that the risks posed by historic mining and instability/dissolution features are further assessed and considered during the ground investigation stage.
- 1.4.3 We recommend machine excavated trial pits to confirm the near surface geology along with dynamic probing to assess the potential for dissolution features, as well as deep boreholes to provide parameters for foundation design.

1.5 Preliminary chemical and gaseous contamination risk assessments

- 1.5.1 Potential sources of chemical and gaseous contamination have been identified. Further investigations are required to refine the preliminary risk assessments.
- 1.5.2 Recommendations for further investigations are provided in Section 7.
- 1.5.3 *Potential additional sources of contamination have been identified since time of initial reporting and are discussed throughout the revised report.*

2 Introduction

2.1	Objectives
2.2	Client instructions and confidentiality
2.3	Site location and scheme proposals
2.4	Report format and investigation standards
2.5	Status of this report
2.6	Report distribution
2.7	Soiltechnics liability

2.1 Objectives

- 2.1.1 This report describes a desk study (preliminary investigation) carried out for Eaton Court, Parish Place, Reading, RG1 7LL.
- 2.1.2 This report has been prepared to support a detailed planning application for the development and where possible address paragraphs 120 and 121 of the National Planning Policies frameworks.

2.2 Client instructions and confidentiality

- 2.2.1 This report was initially prepared in August 2019 and revised in 2021 and 2023 for Cannon Capital Development Ltd. This latest revision is dated February 2026 for Ivaro Ltd, who have reliance on the report.
- 2.2.2 This report has been prepared for the sole benefit of our above-named instructing clients, but this report, and its contents, remains the property of Soiltechnics Limited until payment in full of our invoices in connection with production of this report.
- 2.2.3 This report is final based on our current instructions.

2.3 Site location and scheme proposals

- 2.3.1 The national grid reference for the approximate centre of the site is 537437, 177161.

2.3.2 We understand the scheme comprises the following:

“Change of use and redevelopment of the ground, first and second floors of the building from Class E (offices) to C3 (dwelling houses) to comprise 40 x1 bedroom and 12 x2 bedroom dwelling units.”

Along with a 2-storey roof extension to accommodate 15 further dwellinghouses. Along with car parking, cycle parking and associated landscaping, amenity space, plant and refuse areas, and access arrangements

The proposed works will comprise partial demolition of existing office blocks and redevelopment.

2.3.3 The proposed development layout is shown in Appendix E.

2.4 Report format and investigation standards

2.4.1 Sections 2 to 3 of this report describe the factual aspects of the investigation with Section 4 presenting an engineering appraisal of desk study information relating to project proposals. Section 5 provides a risk assessment of likely chemical contamination with section 6 describing a similar risk assessment in relation to gaseous contamination. Section 7 outlines a strategy for future ground investigations required to progress the scheme to detailed design and construction.

2.4.2 This report describes both contamination and geotechnical aspects of the site. The desk study process followed the principles of BS 10175:2026 ‘Investigation of potentially Contaminated Sites – Code of Practice’ and limited to a preliminary investigation as described in this document.

2.5 Status of this report

2.5.1 This report is final and comprises a preliminary desk-based assessment. As the scheme progresses some further investigation is proposed to refine the assessments contained within.

2.6 Report distribution

- 2.6.1 This report has been prepared to assist in the design and planning process of the development and normally will require distribution to the following parties, although this list may not be exhaustive:

Table summarising parties likely to require information contained in this report	
Party	Reason
Client	For information / reference and cost planning
Developer / Contractor / project manager	To ensure procedures are implemented, programmed and costed
Planning department	To support a planning application
Environment Agency	If ground controlled waters are affected and obtain approvals to any remediation strategies
Independent inspectors such as NHBC / Building Control	To ensure procedures are implemented and compliance with building regulations
Project design team	To progress the design
Principal Designer (PD)	To advise in construction risk identification and management under the Construction (design and management) regulations
Table 2.6	

2.7 Soiltechnics liability

- 2.7.1 Soiltechnics disclaims any responsibility to our Client and others in respect of any matters outside the scope of this report. This report has been prepared with reasonable skill, care and diligence in accordance with the terms of our contract, taking account of the manpower, resources, investigations and testing devoted to it by agreement with our Client. This report is confidential to our Client and Soiltechnics accepts no responsibility of whatsoever nature to third parties to whom this report or any part thereof is made known. Any such party relies upon the report at their own risk.

3 Desk study information and site observations

3.1	General
3.2	Description of the site
3.3	Injurious and invasive weeds and asbestos
3.4	History of the site
3.5	Geology and geohydrology of the area
3.6	Landfill and infilled ground
3.7	Radon
3.8	Flood risk
3.9	Enquiries with Local Authority Building Control and Environmental Health Officers
3.10	Unexploded Ordnance (UXO) Risk

3.1 General

3.1.1 We have carried out a desk study which was limited to a review of readily available information including:

- a) Review of published Ordnance Survey maps dating back to 1879 at various published scales
- b) Inspection of geological maps produced by the British Geological Survey together with relevant geological memoirs
- c) Consultation with Statutory Undertakers
- d) Site reconnaissance
- e) Other relevant published documents

3.1.2 We have obtained old Ordnance Survey maps using the Envirocheck database system. In addition to retrieval of historical and current Ordnance Survey data, Envirocheck provide information compiled from outside agencies.

3.1.3 The study did not extend to research of meteorological information or consultation with other interested parties such as English Heritage (ancient monuments), Ordnance Survey (survey control points), Planning Authorities or Archaeological Units.

- 3.1.4 A copy of records produced by Envirocheck is presented in Appendix D. Envirocheck produce a wealth of factual database information. Although we can provide a discussion on each of the database topics, this would produce a very lengthy document, but some of these discussions would not be relevant to the aims of this report. As a consequence, we have extracted some of the relevant topics and discussed them in this section of the report.
- 3.1.5 The data presented in the following report sections has primarily been extracted from the Envirocheck report.

3.2 Description of the site

- 3.2.1 At time of initial reporting (2019 to 2023) the site comprised a disused commercial premises off Oxford Road and Eaton Place in Reading. The local topography is generally flat, reducing slightly in level to the north-east toward the River Thames, the channel of which is approximately 1km distant. The closest recorded surface water feature is a small tributary of the River Thames, some 402m to the north of the site.
- 3.2.2 The site is roughly square in shape and occupied by a two to three storey building in an L-shaped plan arrangement located in the south and east of the site. The north-west quadrant is occupied by a multi-level car park. The remaining site area is a mixture of block paved car parking areas, small landscaped areas and access pathways. The site itself is essentially flat although levels appear to have been reduced to accommodate the north west car park area.
- 3.2.3 The surrounding land uses are residential to the south, mixed residential and commercial to the east, commercial to the north and mixed residential commercial to the west. A listed building, the Royal Meteorological Society, adjoins the southeast corner of the site.

carpark of Eaton
Court.

- 3.2.4 At time of this report revision enabling works had commenced including the stripping out of the existing office buildings and partial demolition.

3.3 Injurious and invasive weeds and asbestos

3.3.1 Injurious and invasive weeds

- 3.3.1.1 The following weeds are controlled under the Weeds Act 1959:

- Common Ragwort
- Spear Thistle
- Creeping or Field Thistle
- Broad leaved Dock
- Curled Dock

- 3.3.1.2 Whilst it is not an offence to have the above weeds growing on your land, you must:

- Stop them spreading to agricultural land, particularly grazing areas or land used for forage, like silage and hay
- Choose the most appropriate control method
- Not plant them in the wild

Should you allow the spread of these weeds to another party's land, Natural England could serve you with an Enforcement Notice. You can also be prosecuted if you allow animals to suffer by eating these weeds.

- 3.3.1.3 In addition to the above, you must not plant in the wild or cause certain invasive and non-native plants to grow in the wild as outlined in the Wildlife and Countryside act 1981. It is an offence under section 14(2) of the act to '*plant or otherwise cause to grow in the wild*' any plants listed in schedule 9, part II. This can include moving contaminated soil or plant cuttings. The offence carries a fine or custodial sentence of up to 2 years. The most commonly found invasive, non-native plants include:

- Japanese knotweed
- Giant hogweed
- Himalayan balsam
- Rhododendron ponticum
- New Zealand pigmyweed

You are not legally obliged to remove these plants or to control them. However, if you allow Japanese knotweed to spread to another party's land, you could be prosecuted for causing a private nuisance.

- 3.3.1.4 The presence of such weeds on site may have considerable effects on the cost / timescale in developing the site. Japanese knotweed can cause significant damage to buildings, roads and pavements following development, if untreated prior to development.

- 3.3.1.5 Our investigations exclude surveys to identify the presence of injurious and invasive weeds. We did not observe any obvious evidence the above species, however, we recommend specialists in the identification and procedures to deal with injurious and invasive weeds are appointed prior to commencement of any works on site or, if appropriate, purchase of the site.

3.3.2 Asbestos

- 3.3.2.1 We have been made aware that asbestos was present locally within the plant room following a recent pre-demolition survey. Confirmation of disposal of the ACMs has been provided by the Client. The asbestos report and waste disposal ticket are presented in Appendix F.
- 3.3.2.2 Our investigations exclude surveys to identify the presence or indeed absence of asbestos within building fabric on site.

3.4 History of the site

- 3.4.1 An attempt to trace the history of the site has been carried out by obtaining copies of old Ordnance Survey maps provided by Envirocheck. The recent history of the site based on published Ordnance Survey maps is summarised in the following table:

Summary description of site history from Ordnance Survey maps		
Date	Onsite	Offsite
1879	The site is occupied by residential dwellings in the southwest with the remaining land occupied by trees and open space.	The site is bordered by 'Oxford Road' to the south and 'Eton Place' to the east. The Holy Trinity Church is located to the west of the site. The surrounding land is shown as predominantly residential.
1880	The residential dwellings in the southwest are labelled as 'Trinity Villas' with associated glass houses. The open space is shown to be public gardens and a private garden associated with 'Bath Lodge'.	A residential dwelling is shown to the southeast, labelled as 'Bath Lodge'.
1899	As above.	'Eaton Place' borders the east site boundary. No other significant changes shown.
1912	As above.	A tramway is recorded on Oxford road.
1931	New features including glasshouses are recorded in the eastern part of the site.	No significant changes.
1933 - 1938	As above.	No significant changes.
1959 - 1961	'Warehouse' is now recorded in the eastern part of the site.	'Works' and 'Builders' yard' are recorded adjoining the north and north-east site boundary respectively.
1971	'Wallpaper Warehouse' and 'Provision Warehouse' are recorded on site. A second warehouse, recorded as a wallpaper warehouse, now occupies the west-half of the site. The east warehouse is recorded as a 'provision warehouse'.	'Multi-storey Car Park' now recorded 25m to the north-east.
1973-1986	As above.	No significant changes.
1990	The current site layout is recorded.	No significant changes.

Summary description of site history from Ordnance Survey maps

Date	Onsite	Offsite
1993 - 2023	As above.	No significant changes.
2023 – present	Partial demolition of the site.	No significant changes.

Table 3.4.1

3.4.2 Approximately 23m southeast of the site is a dry cleaners, Dots Laundry. The site is not recorded on historical mapping but is recorded on Google Maps and within the Contemporary Trade Directory.

3.5 Geology and geohydrology of the area

3.5.1 Geology of the area

3.5.1.1 Envirocheck reproduce geological map extracts taken from the British Geological Survey (BGS) digital geological map of Great Britain at 1:50,000 scale. A summary of the recorded geological information for the site is presented in the following table:

Summary of Geology and likely aquifer containing strata

Strata	Bedrock or superficial	Approximate thickness	Typical soil type	Likely permeability	Recorded aquifer designation
Taplow Gravel Member	Superficial	3.5m – 6.1m	Sands and Gravels	Permeable	Secondary A Aquifer
White Chalk Subgroup	Bedrock	200m	Chalk	Permeable	Principal aquifer

Table 3.5.1.1

3.5.1.2 Superficial deposits are the youngest geological deposits formed during the Quaternary, which extends back about 2.6 million years. They rest on older deposits or rocks referred to as bedrock. Soil types and assessments of permeability are based on geological memoirs, in combination with our experience of investigations in these soil types.

3.5.1.3 Principal aquifers are defined as deposits exhibiting high permeability capable of high levels of groundwater storage. Such deposits are able to support water supply and river base flows on a strategic scale.

3.5.1.4 Secondary A aquifers are predominantly permeable layers capable of supporting water supplies at a local rather than strategic scale. In some cases, Secondary A aquifers can form an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers.

3.5.2 Water abstractions

- 3.5.2.1 Eleven active ground water and one active surface water abstraction points are located within 1000m of the site. The closest groundwater abstraction point lies 284m to the east of the site with water abstracted for retail purposes, including drinking purposes. The nearest surface water abstraction point is situated 716m east of the site for amenity purposes.
- 3.5.2.2 The site is not located within a zone protecting a potable water supply abstracting from a principal aquifer (i.e. a source protection zone)

3.5.3 Man-made mining cavities

- 3.5.3.1 The Envirocheck report indicates twenty-six man-made cavities within 1000m of the site, all of which are noted to be associated with chalk mining. The nearest is located 345m to the south of the site and is recorded as 'Possible Mineworkings/Ground Anomalies'. As part of our research, we have accessed publicly available reports relating to a subsidence incident that occurred in 2000 approximately 400m to the south of the site (Field Road). The incident was attributed to the collapsed underground chalk workings, which were grouted as part of a remediation scheme.
- 3.5.3.2 The information provided within the Envirocheck report does not give apparent depths or approximate dimensions of each working. The mining cavities within 500m are summarised in the table below.

Summary of possible man-made mining cavities		
Distance from site (m)	Direction from site	Cavity type
345	S	Cluster of five possible mine workings/ground anomalies
355	S	Cluster of three possible mine workings/ground anomalies
357	S	Shaft Entry Mine Workings/Ground Anomalies
444	S	MINE GALLERY (EXTENT UNKNOWN) GROUND ANOMALIES
452	S	Multiple Small-Scale Shaft Entry Pillar and Stall Workings
464	S	6x Possible Mine Workings/Ground Anomalies
468	SW	Old Gravel Pit Pre 1883 But Deepened Possibly for Clay Extraction for Brick Making with Associated Chalk Mine Workings
Table 3.5.3.2		

- 3.5.3.2 The Envirocheck report records forty-four natural cavities within 1000m of the site. The nearest is located some 176m east of the site and is recorded as a cluster of solution pipes. Again, the Envirocheck information does not detail relative base depths or approximate sizes of each cavity type. The table below summarises records relating to natural cavities within 500m of the site:

Summary of possible natural cavities		
Distance from site (m)	Direction from site	Cavity type
176	E	Cluster of three solution pipes
216	SE	Three solution widened joints
340	S	Single solution pipe
344	S	Single solution pipe
362	S	Single solution pipe
391	S	Single solution widened joint
393	S	Cluster of three solution widened joint
395	S	Cluster of two solution widened joint
398	S	Single solution pipe
404	S	Single solution pipe
407	S	Single solution pipe
410	SE	Single solution widened joint
415	S	Cluster of two solution pipes
460	S	Single solution pipe
Table 3.5.3.2		

3.5.4 Coal mining

- 3.5.4.1 The site is not recorded to be within an area affected by past or present coal mining, or minerals worked in association with coal.

3.5.5 Shallow mining and natural subsidence hazards

- 3.5.5.1 The British Geological Survey present hazard ratings for shallow mining and natural subsidence hazards. The site has the following ratings;

Table summarising mining and subsidence hazards	
Hazard	Rating
Mining hazard in non-coal mining areas	Highly Unlikely
Potential for collapsible ground stability hazard	Very Low
Potential for compressible ground stability hazard	No hazard
Potential for ground dissolution stability hazard *	Low
Potential for landslide ground stability hazard	Very low
Potential for running sand ground stability hazard	Very Low
Potential for shrinking or swelling clay ground stability hazard	No hazard
Table 3.5.5	

- 3.5.5.2 It should be noted that a high risk of ground dissolution stability hazard is recorded 24m to the south-east of the site.

- 3.5.5.3 In addition to the above hazard ratings, a report completed by Ove Arup and Partners in December 1991, commissioned by the Department of the Environment (DoE) indicates where mining should be borne in mind when considered planning and development of land. The site is recorded to be in an area of conclusive rock mining as indicated by that report.

3.5.6 Borehole records

- 3.5.6.1 The British Geological Survey (BGS) retain records of boreholes formed from ground investigations carried out on a nationwide basis. The location of boreholes with records held by the BGS is recorded on the borehole map contained in Appendix D. We do not normally obtain copies of these records but can do on further instructions. There is normally a charge made by the BGS for retrieving and copying these records.

Summary of groundwater observations in boreholes excavated close to the site (based on BGS web site)						
Borehole reference	Borehole date	Borehole depth (m)	Appx. distance from site	Strata	Reported observation	Water level (m)
SU77SW809	2001	10m	200m W	Chalk	Water entered rapidly	6.50m
SU77SW110 7	2005	40m	100m NE	Chalk	Moderate flow	20.50m
SU77SW104	-	30m	340m SE	Chalk	-	19.20m
Table 3.5.6.1						

3.6 Landfill and infilled ground

3.6.1 Landfill

- 3.6.1.1 Two historic landfill sites are recorded within 1000m of the site, the nearest of which is located some 689m to the northwest.

3.6.2 Infilled land

- 3.6.1.2 Twenty-one records of potentially infilled land, pits or quarries, in some cases infilled ponds are recorded within 1000m, the nearest of which is located 496m to the northeast. As with the natural cavities and mine workings, there are no specific records of dimensions for each listing. The table below summarises potentially infilled land records within 500m of the site:

Summary of recorded potentially infilled land		
Distance from site (m)	Direction from site	Infill type
458	Southwest	Non-water – pit/quarry/mine
462	Southwest	Water – infilled pond/marsh/stream
496	Northeast	Water – infilled pond/marsh/stream
Table 3.6.1.2		

3.6.2 BGS Mineral Sites

- 3.6.2.1 The Envirocheck report records eighteen BGS mineral sites within 1000m of the site. The nearest is located some 407m to the south. The table below summarises the records within 500m of the site:

Summary of recorded BGS mineral sites			
Distance from site (m)	Direction from site	Commodity	Extraction method
407	South	Chalk	Underground mining
422	South	Chalk	Underground mining
427	South	Chalk	Underground mining
434	South	Chalk	Underground mining
457	South	Chalk	Underground mining
460	South	Chalk	Underground mining
498	South	Chalk	Underground mining
Table 3.6.2.1			

3.6.3 Worked Ground

- 3.6.3.1 There are four references to worked ground within 1000m of the site, the nearest of which is some 947m to the south of the site. Three records are historical brick workings with extensive clay excavations and potential for chalk mining, one record lists shaft, pillar and stall mining.

3.7 Radon

- 3.7.1 With reference to UKRadon Interactive Map, the site is in an areas where 3% to 5% of properties are affected by radon, and basic radon protection measures are required.

- 3.7.2 The Building Research Establishment publication applies to all new buildings, conversions and refurbishments whether they be for domestic or non-domestic use. For non-domestic buildings, the guidance supplements the requirements for radon protection at work specified in the Ionising Radiations Regulations 1999, legislation made under the Health and Safety at Work Act administered by the Health and Safety Executive (HSE). Further information is contained in the HSE/BRE guide “*Radon in the Workplace*”.

3.8 Flood risk

- 3.8.1 The site is not located within a fluvial or tidal floodplain. The site is located within a low risk area for surface water flooding (1 in 1000 year event), and is located in an area with the potential for groundwater flooding to occur at surface.

- 3.8.2 It should be noted that this information does not constitute a site-specific Flood Risk Assessment (FRA). We understand that a full FRA has been prepared for submission by others with the planning application.

3.9 Enquiries with local authority building control and environmental health officers

3.9.1 We had a phone conversation with the Local Authority Building Control and have been informed that they do not hold records of sinkholes or mine workings in this immediate area. We were advised that a cavity search (Peter Brett Associates) may provide additional information and would recommend this search be undertaken during subsequent works.

3.9.2 We have also contacted Local Authority Environmental Health Officers (EHO) with regard to any information they may hold about the site. They have informed us that there is a fee for searching their records. A copy of EHO correspondence can be found in Appendix C.

3.10 Unexploded ordnance (UXO) risk

3.10.1 We have reviewed open source UXO risk mapping available on zeticauxo.com. The site is recorded to be in an area of low risk. It should be noted that this does not constitute a detailed risk assessment for the purposes of the construction phase, and we recommend a preliminary risk assessment is carried out in advance of any intrusive works.

4 Engineering appraisal

4.1	General
4.2	Preliminary geotechnical assessment

4.1 General

- 4.1.1 We have reviewed the desk study information in order to establish potential engineering considerations at the site in view of development proposals. Should it be proposed for development to continue at the site, we recommend intrusive investigations are carried out to support and verify the following assessment.

4.2 Preliminary geotechnical assessment

4.2.1 Proposed foundations

- 4.2.1.1 Inspection of geological maps of the area record the near surface soils are likely to comprise the Taplow Gravel Member to depths in the range of 3.5 – 6.1m, overlying the White Chalk Subgroup. Groundwater is recorded at around 6.5m depth in local BGS boreholes.
- 4.2.1.2 Due to the scale and variability in height of the proposed development, a piled foundation solution is likely to be required. We recommend a ground investigation consisting of both deep and shallow boreholes is carried out to establish ground conditions and provide geotechnical parameters for the design of piled foundations.
- 4.2.1.3 There is the potential for a significant deposit of Made Ground to be present, resulting from historical redevelopment of the site. Large warehouses are recorded prior to 1990 and it is possible that these included basement plant rooms or storage areas.

4.3 Infiltration potential

- 4.3.1 The Taplow Gravel and White Chalk Subgroup are likely to be permeable and therefore may be suitable for disposal of stormwater using soakaways. The risk of dissolutions features, historical mine workings and potential space constraints will all require careful consideration and will likely ultimately preclude the use of soakaways.

4.4 Mineworkings

- 4.4.1 The potential for the site to be affected by historical chalk mineworkings requires further research leading to a site-specific risk assessment. Inspection of Local Authority records relating to previous investigations in the local area and retrieval of abandonment plans (if existing) will be required. The risk assessment will inform the scope of intrusive ground investigations.

4.5 Dissolution features

4.5.1 CIRIA report PR11 (and C574) states 'The presence of dissolution features should be expected on all calcium carbonate rich chalk sites'. Dissolution features in general comprise the following:

- Sinkhole, formed by dissolution of near surface chalks reducing their volume and creating a surface depression.
- Dissolution pipe, a cone or pipe like cavity typically in filled with chalk which has subsided into the cavity, with the infill chalk much weaker than the surrounding chalk.
- Swallow holes, a surface feature where a void in the chalk continuously or intermittently 'swallows' wholly or partially a surface stream.

4.5.2 Dissolution features are generally located above the ground water table and pose a hazard to foundations because of the presence of one or more of the following:

- Large variations in intact chalk horizon
- Loose chalk or superficial deposits infilling pipes
- Cavities or caves within the chalk
- Dissolution widened discontinuities in the chalk affecting its load carrying capacity

4.5.3 Clearly the risk that these hazards present to a building relates to its vulnerability, which in turn relates to the foundation type. A building on shallow spread type foundations and ground bearing floors is more vulnerable than piled foundations extending through the base of these features supporting a suspended ground floor slab.

4.5.4 Research described in CIRIA report C574 concludes that the majority of recent ground subsidence occurring on the chalk outcrop was induced by man. The most common activities triggering subsidence are as follows

- Dynamic and static loading
- Leaking drains
- Leaking water supply pipes
- Water flows from soakaways
- Overzealous garden watering in dry weather

4.5.5 Our observations of buildings and other structures on and close to the site do not suggest the presence of any adverse movement potentially related to dissolution features. It is also noteworthy that the BGS hazard rating for dissolution features at the site is low (although a high hazard rating is given 24m to the south-east). Intrusive ground investigations will be required to determine the density and consistency of the chalk.

5 Chemical contamination

5.1	Contaminated land, regulations and liabilities
5.2	Objectives and procedures
5.3	Development characterisation and identified receptors
5.4	Identification of pathways
5.5	Assessment of sources of contamination
5.6	Initial conceptual model
5.7	Risk assessment summary and recommendations
5.8	Statement with respect to National Planning Policy Framework

5.1 Contaminated land, regulation and liabilities

5.1.1 Statute

5.1.1.1 Part IIA of the Environment Protection Act 1990 became statute in April 2000. The principal feature of this legislation is that the hazards associated with contaminated land should be evaluated in the context of a site-specific risk-based framework. More specifically contaminated land is defined as:

“any land which appears to the local authority in whose area it is situated to be in such a condition, by reasons of substances in, on or under the land, that:

- a) Significant harm is being caused or there is a significant possibility of such harm being caused; or*
- b) Pollution of controlled waters is being or is likely to be caused”.*

5.1.1.2 Central to the investigation of contaminated land and the assessment of risks posed by this land is that:

- i) There must be contaminants(s) at concentrations capable of causing health effects (*Sources*).
- ii) There must be a human or environmental receptor present, or one which makes use of the site periodically (*Receptor*); and
- iii) There must be an exposure pathway by which the receptor comes into contact with the environmental contaminant (*Pathway*).

5.1.1.3 In most cases the Act is regulated by Borough or District Councils and their role is as follows:

- i) Inspect their area to identify contaminated land
- ii) Establish responsibilities for remediation of the land
- iii) See that appropriate remediation takes place through agreement with those responsible, or if not possible:
 - by serving a remediation notice, or
 - in certain cases, carrying out the works themselves, or
 - in certain cases, by other powers
- iv) keep a public register detailing the regulatory action which they have taken

5.1.1.4 For “special” sites the Environment Agency will take over from the Council as regulator. Special sites typically include: -

- Contaminated land which affects controlled water and their quality
- Oil refineries
- Nuclear sites
- Waste management sites

5.1.2 Liabilities under the Act

5.1.2.1 Liability for remediation of contaminated land would be assigned to persons, organisations or businesses if they caused, or knowingly permitted contamination, or if they own or occupy contaminated land in a case where no polluter can be found.

5.1.3 Relevance to predevelopment conditions

5.1.3.1 For current use, Part IIA of the Environmental Protection Act 1990 provides the regulatory regime. The presence of harmful chemicals could provide a ‘source’ in a ‘pollutant linkage’ allowing the regulator (local authority or Environment Agency) to determine if there is a significant possibility of harm being caused to humans, buildings or the environment. Under such circumstances the regulator would determine the land as ‘contaminated’ under the provision of the Act requiring the remediation process to be implemented.

5.1.4 Relevance to planned development

5.1.4.1 The developer is responsible for determining whether land is suitable for a particular development or can be made so by remedial action. In particular, the developer should carry out an adequate investigation to inform a risk assessment to determine:

- a) Whether the land in question is already affected by contamination through source – pathway – receptor pollutant linkages and how those linkages are represented in a conceptual model
- b) Whether the development proposed will create new linkages e.g. new pathways by which existing contaminants might reach existing or proposed receptors and whether it will introduce new vulnerable receptors, and
- c) What action is needed to break those linkages and avoid new ones, deal with any unacceptable risks and enable safe development and future occupancy of the site and neighbouring land?

5.1.4.2 Building control bodies enforce compliance with the Building Regulations. Practical guidance is provided in Approved documents, one of which is Part C, '*Site preparation and resistance to contaminants and moisture*' which seeks to protect the health, safety and welfare of people in and around buildings, and includes requirements for protection against harm from chemical contaminants.

5.1.5 Pollution of controlled waters

5.1.5.1 Part IIA of the Environment Protection Act 1990, defines pollution of controlled waters as:

'The entry into controlled waters of any poisonous, noxious or polluting matter or any solid waste matter'

5.1.5.2 Paragraphs A36 and A39 of statutory guidance (DETR 2000) further define the basis on which land may be determined to be contaminated land on the basis of pollution of controlled waters.

'Before determining that pollution of controlled waters is being, or likely to be, caused, the Local Authority should be satisfied that a substance is continuing to enter controlled waters, or is likely to enter controlled waters. For this purpose, the local authority should regard something as being likely when they judge it more likely than not to occur'

'Land should not be designated as contaminated land where:

- a) *A substance is already present in controlled waters:*
- b) *Entry into controlled waters of that substance from the land has ceased, and*
- c) *It is not likely that further entry will take place.*

Substances should be regarded as having entered controlled waters where:

- a) They are dissolved or suspended in those waters; or*
- b) If they are immiscible with water, they have direct contact with those waters, or beneath the surface of the waters'*

5.1.5.3 Controlled waters are defined in statute to be:

'territorial waters which extend seawards for 3 miles, coastal waters, inland freshwaters, that is to say, the waters in any relevant lake or pond or of so much of any relevant river or watercourse as is above the freshwater limit, and groundwaters, that is to say, any waters contained in underground strata.'

5.1.6 Further information

5.1.6.1 The above provides a brief outline as regards current statute and planning controls. Further information can be obtained from the Department for the Environment, Food and Rural Affairs (DEFRA) and their web site www.defra.gov.uk.

5.2 Objectives and procedures

5.2.1 Objectives

5.2.1.1 This report section discusses investigations carried out with respect to chemical contamination issues relating to the site. As stated in Section 2.4.2, the investigation process followed the principles of BS10175: 2026 *'Investigation of potentially contaminated sites – Code of Practice'*, but limited to a desk study (preliminary investigation)

5.2.1.2 This section of the report produces *'Conceptual models'* based on desk study information obtained to date. The conceptual model is constructed by identification of *contaminants* and establishment of feasible *pathways* and *receptors*. The conceptual model allows a *risk assessment* to be derived. Depending upon the outcome of the risk assessment it may be necessary to carry out remediation and/or further investigations with a view to eliminating, reducing or refining the risk of harm being caused to identified receptors. If appropriate, our report will provide recommendations in this respect.

5.2.1.3. Clearly, we must consider the current pre-development condition, establishing risks which may require action to render the site safe to all relevant (current) receptors meeting the requirements of current legislation (Part IIA of the Environmental Protection Act 1990).

5.2.1.4 Definition of terms used in the preceding paragraph and subsequent parts of this section of the report are presented in Appendix A.

5.2.2 Procedure to assess risks of chemical contamination

5.2.2.1 For the purposes of presenting this section of this report, we have adopted the following sequence in assessing risks associated with chemical contamination.

Table outlining sequence to assess risk associated with chemical contamination		
Conceptual model element	Contributory information	Outcome
Receptor	Development categorisation	Identification of receptors at risk of being harmed Criteria for risk assessment modelling
Pathways	Geology and ground conditions Development proposals	Identification of critical pathways from sources to receptors
Source	Previous site history Desk study information	Identification of a chemical source

Table 5.2.2

5.2.2.2 We have adopted, in general, the procedures described in CIRIA C552 '*Contaminated land risk assessment - a guide to good practice*' in deriving a risk assessment. Initially we have carried out a 'phase 1 assessment' based on desk study information and site reconnaissance, to produce an initial conceptual model and thus a preliminary risk assessment. This model / assessment is then used to target future fieldwork activities and laboratory testing, ultimately allowing the conceptual model to be updated and risk assessments to be refined.

5.3 Development characterisation and identified receptors

5.3.1 Site characterisation

5.3.1.1 The nature of the site has a significant influence the likely exposure pathways between potentially contaminated soils and potential receptors. The following table summarises elements which characterise the site based on desk study information.

Summary of site characteristics		
Element	Source / criteria	Characteristic
Current land use	Observations	Two to three storey office building with car parking.
Future land use	Advice	Residential development with private and communal amenity space.
Site history	Desk study	Dwellings with gardens recorded until c1959, after which time warehouses are recorded. The current site arrangement is recorded after 1990.
Geology	Desk study	Up to 6.0m of Taplow Gravel overlying the White Chalk Subgroup. Groundwater recorded at ~6.5m.
Groundwater	Aquifer potential	Secondary A aquifer in Taplow Park Gravel Member. Principal aquifer within the White Chalk Subgroup.
	Abstractions	Active groundwater abstraction points approximately 284m from site
	Source protection zone	The site is not located within a source protection zone.
Surface waters	Location	A tributary to the River Thames is located 402m to the north.
	Abstractions	Nearest active extraction 716m east of site.

Table 5.3.1.1

5.3.2 Identified receptors

5.3.2.1 The principal receptors subject to harm caused by any contamination of the proposed development site are as follows.

Principle Receptor	Detail
Humans	Users of the current site
	End user of the developed site
	Construction operatives and other site investigators
Vegetation	Plants and trees, both before and after development
Controlled waters	Ground waters (used for abstraction or feeding rivers / streams etc)
Building materials	Materials in contact with the ground

Table 5.3.2.1

5.3.2.2 This section of the report assesses those receptors tabulated above.

5.3.3 Human receptors

5.3.3.1 The Contaminated Land Exposure Assessment (CLEA) model can be used to derive guideline values, against which land quality data can be compared to allow an assessment of the likely impacts of soil contamination on humans. Parameters used within the model are chosen to allow guideline values to be derived for a variety of land uses and exposure pathways. For example, a construction worker is likely to be exposed in different ways and for different durations than an adult in a residential setting.

5.3.3.2 On the basis that the current site is restricted to commercial activities, an adult is considered the appropriate critical receptor. Following completion of the residential development the critical site user (receptor) is considered to be a child under the age of 6 years. These criteria have been used in the conceptual model for the current and future site use. Our assessment also considers construction operatives as adult receptors.

5.3.4 Vegetation receptors

5.3.4.1 Soil contaminants can have an adverse effect on plants if they are present at sufficient concentrations. The effects of phytotoxic contaminations include growth inhibition, interference with natural processes within the plant and nutrient deficiencies.

5.3.4.2 There are several semi-mature deciduous/coniferous trees present on site. As soft landscaping is proposed in the final development, vegetation is considered to be a potential sensitive receptor under current and future site conditions.

5.3.5 Water receptors

5.3.5.1 The underlying Taplow Gravels and White Chalk Subgroup are designated Secondary and Principal aquifers respectively. Groundwater is therefore considered to be a potential sensitive receptor.

5.3.5.2 Surface waters are remote from the site and therefore not viable receptors.

5.3.6 Building materials

5.3.6.1 Building materials in contact with the ground such as concrete foundations and water supply pipes, are receptive to damage caused by aggressive ground conditions. Generally, risks and preventative measures are impossible to establish at the desk study stage and investigations are required to manage any identified risks. At this stage this receptor group are not considered further.

5.3.7 Summary of identified receptors

5.3.7.1 Based on the above assessments, the following table summarises identified and critical receptors.

Table summarising identified (viable) receptors				
Principle Receptor	Detail	Viable and critical receptors		
		Viability	Critical receptor	
Humans	Users of the current site	Yes	Offices	Adult
	End user of the developed site	Yes	Residential development	Child
	Construction operatives and other site investigators	Yes		Adult
Vegetation	Current site	Yes	Trees on site	Vegetation
	Developed site	Yes	Trees to remain	Vegetation
Controlled waters	Surface waters (Rivers, streams, ponds and above ground reservoirs)	No	Surface waters remote from site	Surface waters
	Ground waters (used for abstraction or feeding rivers / streams etc)	Yes	Secondary and principal aquifers recorded on site	Groundwater
Building materials	Materials in contact with the ground	Yes	Not considered further	Building materials

Table 5.3.7

5.4 Identification of pathways

5.4.1 Pathways to human receptors

5.4.1.1 Guidance published by the Environment Agency in Science Report SC050021/SR3 '*Updated technical background to the CLEA model*' provides a detailed assessment of pathways and assessment and human exposure rates to source contaminants. In summary, there are three principal pathway groups for a human receptor:

Table summarising likely pathways	
Principal pathways	Detail
Ingestion through the mouth	Ingestion of air-borne dusts
Inhalation through the nose and mouth.	Inhalation of air-borne dusts
	Inhalation of vapours
Absorption through the skin.	Dermal contact with dust
	Dermal contact with soil
Table 5.4.1.1	

5.4.1.2 The site is currently occupied by an office building with associated hardstandings. With the site predominantly covered in buildings and hardstandings, pathways for the exposure of site users to contaminated soils are significantly restricted.

5.4.1.3 The site is to be developed for residential use with both private and communal amenity space. Based on the landscaped proposals presented in Appendix E, the areas of private space are small and will be fully paved and therefore are unlikely to be potentially productive. On this basis, pathways associated with the consumption of home-grown produce are not relevant.

5.4.1.4 Pathways associated with the consumption of home-grown produce are not relevant for construction operatives.

5.4.1.5 A summary of our pathway assessment is presented in Section 5.4.4.

5.4.2 Pathways to vegetation

5.4.2.1 Guidance published by the Environment Agency in Science Report SC050021/SR (Evaluation of models for predicting plant uptake of chemicals from soil) provides a detailed assessment of plant uptake pathways. In summary, plants are exposed to contaminants in soils by the following pathways:

- Passive and active uptake by roots.
- Gaseous and particulate deposition to above ground shoots.
- Direct contact between soils and plant tissue.

5.4.2.2 All of the above routes of exposure are considered to be viable pathways.

5.4.3 Pathways to controlled waters

5.4.3.1 A number of pathways exist for transport of soil contamination to controlled waters. A summary of these pathways are:

- Percolation of water through contaminated soils.
- Near-surface water run-off through contaminated soils.
- Saturation of contaminated soils by flood waters.

5.4.3.2 The following table summarises the controlled waters pathway assessment:

Table summarising controlled waters pathway assessment			
Pathway	Likelihood of pathway occurring	Receptor	Justification
Percolation of water through contaminated soils	Low likelihood	Groundwater	Near surface soils likely to be permeable but site predominantly covered with buildings and hardstandings, restricting the pathway.
Near surface run-off through contaminated soils	Unlikely	-	Surface water receptor not identified.
Saturation of contaminated soils by floodwaters	Low likelihood	-	Site not located within a floodplain. Site located in a low risk area for surface water flooding. Potential for groundwater flooding to occur at surface.

Table 5.4.4

5.4.4 Summary of identified likely pathways

5.4.4.1 Based on the above assessments, the following table summarises likely pathways of potential chemical contaminants at the site to identified receptors.

Table of likely pathways		
Receptor group	Critical receptor	Pathway
Proposed site users	Child	Ingestion air-borne dusts
		Ingestion of soil.
		Inhalation air-borne dusts
		Inhalation of vapours
		Dermal contact with dust
		Dermal contact with soil
Current site users and construction operatives	Adult	Ingestion of air-borne dusts
		Ingestion of soil
		Inhalation of air-borne dusts
		Inhalation of vapours
		Dermal contact with dust
		Dermal contact with soil
Vegetation		Root uptake, deposition to shoots and foliage contact.
Controlled waters	Groundwater	Percolation of water through contaminated soils
		Saturation of contaminated soils by flood waters

Table 5.4.4

5.5 Assessment of sources of chemical contamination

5.5.1 Introduction

5.5.1.1 Initially, potential sources of contamination are assessed using the following elements of the investigation process.

1. History of the site
2. Desk study information
3. Site reconnaissance
4. Geology

These elements will dictate a relevant soil/water testing regime to quantify possible risks of any identified contaminative sources which may harm identified receptors.

5.5.2 Source assessment – History of the site

5.5.2.1 The history of the site and its immediate surroundings based on published Ordnance Survey maps is described in Section 3.

5.5.2.2 Two warehouses were recorded for an extended period of time with no specific land use, or material storage listed. Given the age of both buildings, there is a high likelihood of asbestos containing materials to be present within any crush associated with these buildings. There is also a possibility that these warehouses had unrecorded basement levels, or a basement heater room with on-site oil storage.

5.5.2.3 A Works is recorded, situated at the northern site boundary. 'Works' is a generic term and could refer to numerous different processes which use solvents or oils, possibly stored below ground for convenience.

5.5.2.4 Clearly, the possibility of potential soil contamination from these land uses would be dependent upon the management of the potential contaminants within each business.

5.5.3 Source assessment – Desk study information

5.5.3.1 Envirocheck presents a detailed database of environmental information in relation to the site including;

- Pollution incidents
- Landfill sites
- Trading activities

5.5.3.2 Based on the Envirocheck data (refer Appendix D) the site has no recorded history of any pollution events or trading activities likely to result in a source of contamination or is located in close proximity to a landfill site.

5.5.3.3 On review of present day mapping and Envirocheck - Contemporary Trade Directory entries, a dry cleaners is recorded approximately 23m southeast of the site area. Dry

cleaners can be a potential source of chlorinated solvents and VOCs that can migrate onto the site. Whilst it is unknown whether the premises stores solvents on site, the potential source cannot be discounted.

5.5.4 Source assessment – Site reconnaissance

5.5.4.1 A full description of the site and observed adjacent land uses is provided in Section 3 of this report. A plan summarising observations made on site during our site reconnaissance visit is presented on Drawing 02.

5.5.4.2 We did not observe any obvious evidence of any current or recent activities on site or adjacent sites likely to result in a potential source of chemical contamination.

5.5.5 Source assessment – Geology

5.5.5.1 Construction and demolition processes inherently produce Made Ground. There may have been basements to former structures which have since been infilled. Made Ground is therefore considered a potential source of contamination.

5.5.5.2 The geological map of the area indicates the topography local to the site is formed in deposits of the Taplow Gravel Member overlying the White Chalk Subgroup. Typically, and in our experience, these deposits do not exhibit any abnormal concentrations of naturally occurring chemical contaminants.

5.5.6 Source assessment - summary

5.5.6.1 Based on the paragraphs above, we have identified the following potential sources of contamination:

Table summarising results of source assessment				
Source	Origin of information	Possible contaminant	Probability of risk occurring	Likely extent of contamination
On site				
Historic warehouses	Historic maps	Unknown – consider common organic, inorganic, TPH and asbestos	Likely	Site wide
Made Ground	Site history	Unknown and subject to investigation	Likely	Site wide
Adjacent sites				
Works	Historic maps	Unknown and subject to investigation	Low likelihood	Limited to northwest corner of site
Dry cleaner	Present day mapping & Envirocheck Report	Chlorinated solvents and VOCs	Moderate	Given the close proximity of the dry cleaners, there is a possibility of contamination migration.
Table reference 5.5.6.1				

5.6 Initial Conceptual Model

- 5.6.1 Based on our assessment of potential contaminative sources, identified receptors and viable pathways to receptors described in preceding paragraphs, we have produced an initial conceptual model in the form of a table.
- 5.6.2 *An updated iCSM is presented as Table 1 in Appendix B.*
- 5.6.2 Based on the conceptual model, potential sources of contamination and pollutant linkages have been identified. This assessment is solely based on desk study information and investigations are required to quantify and refine risks. Recommendations for a scope of intrusive investigations are presented in Section 7.

6 Gaseous contamination

6.1	Legislative framework
6.2	General
6.3	Assessment of source of gases
6.4	Gas migration
6.5	Conclusion
6.6	Statement with respect to National Planning Policy Framework

6.1 Legislative framework

- 6.1.1 There is currently a complex mix of documentation relating to legislative and regulatory procedures on the issue of contamination, and it is not considered a purpose of this report to discuss the detail of these regulations. Essentially, Government Policy is based on *'suitable for use approach'*, which is relevant to both the current and proposed future use of land. For current use Part IIA of the Environmental Protection Act 1990 provides the regulatory regime (see Section 5.1 above). The presence of harmful soil gases could provide a 'source' in a 'pollutant linkage' allowing the regulator (Local Authority) to determine if there is a significant possibility of harm being caused to humans, buildings or the environment. Under such circumstances the regulator would determine the land as 'contaminated' under the provision of the Act requiring the remediation process to be implemented with the Environment Agency responsible for enforcement.
- 6.1.2 The Town and Country Planning (General Development Procedure) Order 1995, requires the planning authority to consult with the Environment Agency before granting planning permission for development on land within 250 metres of land which is being used for deposit of waste, (or has been at any time in the last 30 years) or has been notified to the planning authority for the purposes of that provision.
- 6.1.3 Building control bodies enforce compliance with the Building Regulations. Practical guidance is provided in Approved documents, one of which is Part C, *'Site preparation and resistance to contaminants and moisture'* which seeks to protect the health, safety and welfare of people in and around buildings, and includes requirements for protection against harm from soil gas.

6.2 General

6.2.1 The following assessment relates to the potential for, and the effects of, gases generated by biodegradable matter. A separate, but related class of problem involves migration of vapour phase of hydrocarbons resulting from spillages of petroleum and solvents but will be considered during future site investigations. The potential for the development to be affected by Radon Gas is considered in Section 3 above. The principal ground gases are carbon dioxide (CO₂) and methane (CH₄). The following table provides a summary of the effects of these gases when mixed with air.

Significant gas concentrations in air		
Gas	Concentration by volume	Consequence
Methane	0.25%	Ventilation required in confined spaces
	5 - 15%	Potentially explosive when mixed with air
	30%	Asphyxiation
	75%	Death after 10 minutes
Carbon Dioxide	0.5%	8-hour long term exposure limit (LTCL) (HSE workplace limit)
	1.5%	15 min short term exposure limit (STCL) (HSE workplace limit)
	>3%	Breathing difficulties
	6 – 11%	Visual distortion, headaches, loss of consciousness, possible death
	>22%	Death likely to occur

Table 6.2.1

6.2.2 Following the current Building Regulations Approved Document C1, Section 2 'Resistance to Contaminants' (2004 incorporating 2010 and 2013 amendments) a risk assessment approach is required in relation to gaseous contamination based on the source-pathway-receptor conceptual model procedure. We have adopted procedures described in the following reference documents for investigation and assessments of risk of the development being affected by landfill type gases (permanent gases) and if appropriate the identification of mitigation measures.

- BS 10175:2026 'Investigation of potentially contaminated sites- Code of Practice'
- BS 8576:2013 'Guidance on investigations for ground gas – Permanent gases and Volatile Organic Compounds (VOCs)'
- BS 8485:2015+A1 2019 'Code of practice for the design of protective measures for methane and carbon dioxide ground gases for new buildings'
- CIRIA Report C665 'Assessing risks posed by hazardous ground gases to buildings' (2007)
- CL:AIRE Research Bulletin RB17 'A pragmatic approach to ground gas risk assessment' (November 2012)

6.2.3 An assessment of the risk of the site being affected by ground gases is based on the following aspects:

- a) Source of the gas
- b) Investigation information
- c) Migration feasibility
- d) Sensitivity of the development and its location relative to the source

6.3 Assessment of source of gases

6.3.1 General sources

6.3.1.1 The following table summarises the common sources of ground gases and parameters affecting the generation of ground gases:

Source and control of gases	
Type	Parameters affecting the rate of gassing
Landfills	Portion of biodegradable material, rate reduces with time
Mine workings	Flooding reduces rate of gassing
Dock silt	Portion of organic matter
Carbonate deposits	Ground / rainwater (acidic) reacts with some carbonates to produce carbon dioxide.
Made Ground	Thickness of Made Ground and proportion of degradable organic matter
Naturally deposited soils/rocks	Portion of organic matter

Table 6.3.1

The rate of decomposition in gas production is also related to atmospheric conditions, pH, temperature, and water content / infiltration.

6.3.1.2 This site is not within a dockland environment or an area affected by coal mine workings. However near surface soils/rocks are likely exhibit high carbonate content. Further to this, there are recorded mine workings underlying parts of Reading and a known history of unrecorded workings.

6.3.2 Landfill and infilled ground sources

6.3.2.1 Waste Management Paper 27 (1991) produced by the Department of the Environment 'Control of Landfill Gases' contains the recommendation to avoid building within 50m of a landfill site actively producing large quantities of landfill type gases and to carry out site investigations within a zone 250m beyond the boundary of a landfill site. No distinction is made between sites of differing ground conditions, but the paper does not advocate the site is safe beyond the 250m zone, dependant, of course, upon the type of landfill and potential for migration of landfill gases.

6.3.2.2 Based on the information provided by Envirocheck relating to landfill, infilled ground and mineral sites, there is unlikely to be a source of ground gas with the potential to affect the subject site associated with landfilling or restoration of opencast workings.

6.3.3 Soil conditions

6.3.3.1 Based on the site history, there is likely to be a significant deposit of Made Ground at the site associated with demolished former structures. At this stage, the composition of the Made Ground is unknown and therefore must be considered a likely source of ground gas.

6.3.3.2 The site is underlain by soils and rocks which have a naturally high carbonate content. Following BS8576 figure 6, such soils are determined to represent a very low potential for generation of a source of carbon dioxide.

6.3.4 Source assessment summary

6.3.4.1 The following table summarises the possibility of a source of landfill type gases.

Source assessment summary		
Potential source origin	Likelihood of source	Evidence
Landfills	Unlikely	Desk study information
Mine workings	Low likelihood	Abandoned mine workings known local to the south of the site. Further investigation required to assess potential for mineworkings beneath the site
Dock silt	Unlikely	Site remote from dockland environment
Carbonate deposits	Low likelihood	Recorded soil conditions indicate high concentrations of carbonates
Made Ground	Likely	Significant thickness of Made Ground possible due to historical redevelopment
Soils	-	Unknown and subject to site investigation
Table 6.3.4.1		

6.4 Conclusion

6.4.1 Based on the above there are possible sources of landfill-type ground gases which may affect the subject site. On this basis, it is considered necessary to consider possible pathways for migration of ground gases, from these potential sources to the site.

6.5 Gas migration

6.5.1 Geological maps record the topography of the area is formed in deposits of Taplow Gravels overlying the White Chalk Subgroup. Based on published memoirs and in our experience, these natural deposits provide little resistance to both lateral and vertical migration of landfill type gases. On this basis it is considered possible that the identified sources of landfill type gases would feasibly migrate to the subject site.

6.6 Conceptual model

6.6.1 Based on the above, there are potential sources of ground gas at the site. Our conceptual model is tabled below.

Conceptual model		
Potential source origin	Potential pathway	Receptors at risk
Mineworkings	Via underlying permeable soils	End users
Carbonate deposits		Construction operatives
Made Ground		Buildings
Table 6.5.1		

- 6.6.2 On this evidence we are of the opinion that the site is at risk of being affected by ground gases (carbon dioxide / methane) sufficient to potentially cause harm to human end users of the site, construction operatives or indeed buildings. On this basis, investigations are required following procedures described in CIRIA report C665, to quantify the risk, and if appropriate, identify mitigation measures selected with reference to documents listed in section 6.2.2 above.

6.7 VOCS

- 6.7.1. Following a review of the surrounding site uses a dry cleaners was identified approximately 23m southeast of the site. The potential use of chlorinated solvents in dry cleaning products presents a vapour risk to proposed end users, this has been acknowledged in the iCSM.

6.8 Radon

- 6.8.1 The site is in a radon affected area and basic radon protection measures are required.

7 Future investigations

7.1 Based on the conclusions above, site investigations will be required as the scheme progresses to refine our assessments. The objectives of the investigations are as follows:

Topic	Objective	Investigation
Unexploded ordnance	Risk assessment	Carry out preliminary risk assessment to CIRA C681.
Ground conditions	Determine soil profiles	Trial pits and boreholes. Dynamic probing to determine strength and consistency of the intact chalk horizon across the site to assess the potential for dissolution features.
Foundations	Identify appropriate foundation solutions (buildings and pavements)	Trial pits to assess near-surface construction risks (i.e., excavation stability, groundwater ingress, nature and distribution of buried obstructions) and viability of spread foundations for low rise aspects of the proposals. Deep boreholes to determine geotechnical properties of soils for piled/raft foundation design. Groundwater installations for monitoring of water levels.
Chemical contamination	Refine risk assessments	Trial pits and shallow boreholes for collection of Made Ground samples for laboratory testing. Soils to be tested for a comprehensive suite of organic & inorganic contaminants and asbestos. Target potential point sources of contamination. Installation of groundwater monitoring standpipes for collection of samples for laboratory testing.
Gas contamination	Refine risk assessments	Install ground gas monitoring points and implement monitoring regime. Consider continuous remote monitoring for more robust risk assessment.

Definition of geo-environmental terms used in this report

Conceptual model

Textual and/or schematic hypothesis of the nature and sources of contamination, potential migration pathways (including description of the ground and groundwater) and potential receptors, developed on the basis of the information obtained from the investigatory process.

Contamination

Presence of a substance which is in, on or under land, and which has the potential to cause harm or to cause pollution of controlled water.

Controlled water

Inland freshwater (any lake, pond or watercourse above the freshwater limit), water contained in underground strata and any coastal water between the limit of highest tide or the freshwater line to the three mile limit of territorial waters.

Harm

Adverse effect on the health of living organisms, or other interference with ecological systems of which they form part, and, in the case of humans, including property.

Pathway

Mechanism or route by which a contaminant comes into contact with, or otherwise affects, a receptor.

Receptor

Persons, living organisms, ecological systems, controlled waters, atmosphere, structures and utilities that could be adversely affected by the contaminant(s).

Risk

Probability of the occurrence of, and magnitude of the consequences of, an unwanted adverse effect on a receptor.

Risk assessment

Process of establishing, to the extent possible, the existence, nature and significance of risk.

Definition of environmental risk/hazard terms used in this report

Based on CIRIA report C552 '*Contaminated land risk assessment – A guide to good practice*'.

Potential hazard severity definition

Category	Definition
Severe	Acute risks to human health, catastrophic damage to buildings/property, major pollution of controlled waters
Medium	Chronic risk to human health, pollution of sensitive controlled waters, significant effects on sensitive ecosystems or species, significant damage to buildings or structures
Mild	Pollution of non-sensitive waters, minor damage to buildings or structures
Minor	Requirement for protective equipment during site works to mitigate health effects, damage to non-sensitive ecosystems or species

Probability of risk definition

Category	Definition
High likelihood	Pollutant linkage may be present, and risk is almost certain to occur in long term, or there is evidence of harm to the receptor
Likely	Pollutant linkage may be present, and it is probable that the risk will occur over the long term
Low likelihood	Pollutant linkage may be present, and there is a possibility of the risk occurring, although there is no certainty that it will do so
Unlikely	Pollutant linkage may be present, but the circumstances under which harm would occur are improbable

Level of risk for potential hazard definition

Probability of risk	Potential severity			
	Severe	Medium	Mild	Minor
High likelihood	Very high	High	Moderate	Low/Moderate
Likely	High	Moderate	Low/Moderate	Low
Low likelihood	Moderate	Low/Moderate	Low	Very low
Unlikely	Low/Moderate	Low	Very low	Very low

See below for definitions of 'very high' to 'very low'

Definition of environmental risk/hazard terms used in this report

Based on CIRIA report C552 '*Contaminated land risk assessment – A guide to good practice*'.

Risk classifications and likely action required:

Very high risk

High probability that severe harm could arise to a designated receptor from an identified hazard OR there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised is likely to result in substantial liability. Urgent investigation and remediation are likely to be required.

High risk

Harm is likely to arise to a designated receptor from an identified hazard. This risk, if realised, is likely to result in substantial liability. Urgent investigation is required and remedial works may be necessary in the short term and are likely over the long term.

Moderate risk

It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is likely that the harm would be relatively mild. Investigation is normally required to clarify risks and to determine potential liability. Some remedial works may be required in the long term.

Low risk

It is possible that harm could arise to a designated receptor from an identified hazard but it is likely that this harm, if realised, would at worst normally be mild.

Very low risk

It is a low possibility that harm could arise to a designated receptor. On the event of such harm being realised it is not likely to be severe.

Your contact is: **Caryl Thomas Environmental Protection**

Dear Ms Thomson

ENVIRONMENTAL INFORMATION REGULATIONS 2004

RE: Environmental Information Request: Eaton Court, 104-112 Oxford Road, Reading, RG1 7FU

Following receipt of your environmental information request, I am writing to confirm the procedure for such requests. Under the Environmental Information Regulations 2004, a reasonable charge may be made for the provision of this information (Regulation 8).

This is currently £74 per hour for an enquiry relating to a commercial property, with a minimum charge of 2 hours per search. Having reviewed your request I estimate that the total cost will be £148.

If you would like to proceed with your enquiry, please make a credit or debit card payment of the above amount by telephoning the Council's call centre on 01189 373787 and giving them the following information: Environmental information search; ref no; cost code: 122A (contaminated land); and request a confirmation email to be sent to yourself and environmental.protection@reading.gov.uk so that we can proceed with your search.

The information will be sent to you within 15 working days of receipt of your payment. If I do not hear from you, I will assume that you do not wish to proceed with your enquiry.

The search will refer to Environmental Protection information, historic maps, planning records and the Environment Agency's historic data. The search may not identify any further information to that already obtained, however due to the officer time required to carry out this enquiry, the fee will still apply.

If you would like to discuss this matter further please contact me.

Yours sincerely,
Caryl Thomas
Business Support Officer

NOTES*

ENVIRONMENTAL INFORMATION REGULATIONS 2004, regulation 2 (1)

"environmental information" has the same meaning as in Article 2(1) of the Directive, namely any information in written, visual, aural, electronic or any other material form on -

- (a) the state of the elements of the environment, such as air and atmosphere, water, soil, land, landscape and natural sites including wetlands, coastal and marine areas, biological diversity and its components, including genetically modified organisms, and the interaction among these elements;
- (b) factors, such as substances, energy, noise, radiation or waste, including radioactive waste, emissions, discharges and other releases into the environment, affecting or likely to affect the elements of the environment referred to in (a);
- (c) measures (including administrative measures), such as policies, legislation, plans, programmes, environmental agreements, and activities affecting or likely to affect the elements and factors referred to in (a) and (b) as well as measures or activities designed to protect those elements;
- (d) reports on the implementation of environmental legislation;
- (e) cost-benefit and other economic analyses and assumptions used within the framework of the measures and activities referred to in (c); and
- (f) the state of human health and safety, including the contamination of the food chain, where relevant, conditions of human life, cultural sites and built structures inasmuch as they are or may be affected by the state of the elements of the environment referred to in (a) or, through those elements, by any of the matters referred to in (b) and (c);

Reasonable Charge

Under Regulation 8 of the Environmental Information Regulations, Reading Borough Council reserves the right to make a reasonable charge for the following:

- (a) determining whether we hold the information requested
- (b) locating the information, or a document containing the information
- (c) retrieving the information
- (d) extracting the information from documents containing it
- (e) other costs of making available the information (e.g. supervision of scanning and photographing of documents, postage and photocopying costs).

This charge is currently set at £50 per hour with a minimum charge of 2 hours.

N.B. Postage and other means of transmission (e.g. CD-Roms) will be charged at cost and photocopying at 10p per A4 sheet

There is no charge for allowing an applicant

- To access any public register or lists of environmental information it holds.
- **Note: Unreasonable Requests**
Reading Borough Council is entitled to refuse to deal at all with requests which are "manifestly unreasonable". In deciding whether a request falls into that category we will adopt the guidance of the Information Commissioner on the parallel Freedom of Information Act provisions. We are likely to treat as manifestly unreasonable any request (which may be the latest in a series of requests) which would impose a significant burden and:
 - clearly does not have any serious purpose or value;
 - is designed to cause disruption or annoyance
 - has the effect of harassing this Authority
 - can otherwise fairly be characterised as obsessive or manifestly unreasonable.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Russian Military Mapping Legends

1:5,000 and 1:10,000 mapping

a. Not drawn to scale b. Drawn to scale

243.8 Values for prominent elevations

186.0 Numbers for spot elevations, depth soundings, contour lines, etc.

0.2 Velocity of the current, width of river bed, depth of river

Fractional terms: length and capacity of bridges; depth of fords and condition of the river bottom; height of forest and the diameter of trees

Russian Alphabet (For reference and phonetic interpretation of map text)

А а (A) Б б (B) В в (V) Г г (G) Д д (D) Е е (E) Ё ё (YO) Ж ж (ZH) З з (Z) И и (I) Й й (Y) К к (K) Л л (L) М м (M) Н н (N) О о (O) П п (P) Р р (R) С с (S) Т т (T) У у (U) Ф ф (F) Х х (KH) Ц ц (TS) Ч ч (CH) Ш ш (SH) Щ щ (SHCH) Ъ ъ (-) Ы ы (Y) Ь ь (') Э э (E) Ю ю (YU or IU) Я я (YA or IA)

1:25,000 mapping

a. Not drawn to scale b. Drawn to scale

Key to Numbers on Mapping

SU77SW_Reading

No.	Description
3	Factories (Including Machinery, Radio Electronics And Tubing)
7	Factory (Use Unknown)
19	Factories (Radio Electronics And Electro Technical)
26	Police Station/Headquarters
40	Railway Station (Freight)
41	Railway Station (Freight And Passenger)

soiltechnics
environmental and geotechnical consultants

Published 1882

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.
