For and on behalf of Paddock Geo Engineering Limited			

1.0 INTRODUCTION

Paddock Geo Engineering Limited (PGE) were instructed by Eaton Reading Ltd; the Client, to undertake a Preliminary Contamination Risk Assessment (Stage 1 Tier 1 of a Site Contamination Assessment) of the subject site, referred to as Eaton Court, Oxford Road, Reading, RG1 7NG.

The overall objective of the Preliminary Contamination Risk Assessment (PRA) was to assess any potential risks to the proposed development of the site from contamination or any other potential geo-environmental or geotechnical hazards. The Risk Assessment undertaken relates to the proposed residential re-development of the site.

1.1 Terms of Reference

- British Standard BS10175:2011+A2:2017 Investigation of Potentially Contaminated Sites - Code of Practice;

2.0 THE SITE AND SURROUNDING AREA

2.1 Site Description

The site is rectangular in shape, covers approximately 0.43ha and is centred on an approximate National Grid Reference (NGR) 470890, 173430 at post code RG1 7NG.

Site Location Plans and an Aerial Photograph are presented in Appendix A.

2.2 Proposed Development

The proposed development is understood to comprise the change of use from office to residential, under permitted development Class MA (application number PL/25/1025).

The proposal includes the conversion of the two- and three-storey wings to residential use, while retaining all external elevations and incorporating car parking, cycle storage, and refuse facilities.

The scheme proposes a total of 52 units, comprising a mix of one and two bedroom apartments.

The soil contamination exposure characteristics for the proposed development will be residential.

A proposed site layout plan is included within Appendix A.

2.3 Walkover Survey

2.3.1 Site Area

A site walkover survey was conducted on 18th February 2026 by a representative of Paddock Geo Engineering Limited. A series of photographs taken during the walkover survey are presented in Appendix B along with a Site Walkover Survey Plan.

The site is roughly rectangular in shape and situated between Oxford Road and Easton Place in central Reading.

At the time the site walkover was undertaken the site was disused as offices/commercial space any construction type works were in progress on the site.

The site comprised a single L-shaped commercial office type building of brick construction which extended along the eastern and southern site boundaries. A separate structure formed a multistorey car park which occupied the northwestern quarter of the site. The two buildings were separated by an open-air courtyard which contained block paving, concrete and asphalt surfacing across access roads and parking areas and minor areas of soft landscaping which contained mature deciduous trees. Access to the courtyard was from the north, off Eastern Place through a gated entrance.

To the south of the office building was a small frontage separating the building from Oxford Road which runs along the southern site boundary. The frontage contained block paving surfacing with additional minor areas of decorative soft landscaping containing mature trees.

The multistorey car park was of brick and concrete construction and was noted to include several parking decks which extended both above and below ground. The office building was also noted to contain a basement level.

The area surrounding the site was general noted to comprise of commercial buildings used for office space and retail.

The site appears to be low risk for potential sources of onsite contamination. The most likely sources of onsite contamination are associated with potential Made Ground across the developed areas of the site.

2.3.2 Surrounding Area

The area surrounding the site is largely residential to the north, west and south and commercial to the east.

A large railway line junction and sidings is present at 450m northwest.

2.4 Previous Investigations

PGE are not aware of any previous intrusive investigations or environmental walkovers for the subject site or the immediate area.

3.0 GEO-ENVIRONMENTAL SETTING

3.1 Geology

Information on the underlying geology at the site has been obtained from the British Geological Survey (BGS) online Geoindex Map Viewer and Geological Mapping information provided by Landmark within the Envirocheck Report (a copy of which is provided in Appendix C).

The geological maps indicate that the site is directly underlain by superficial deposits of the Taplow Gravel Member (sand and gravel).

The bedrock at the site is formed of the Seaford Chalk Formation and Newhaven Chalk Formation (undifferentiated)

No artificial ground/Made Ground are indicated to be present on the site.

3.1.1 Borehole Records

A search of the online BGS database for published borehole records within the area identified a large number of available borehole records in the vicinity of the site. The nearest available borehole record within an area containing comparable geology is located at 14m to the east (SU77SW1108).

Borehole reference SU77SW1108, was drilled to 37.5m bgl. The encountered geology comprised Made Ground to 2.20m bgl over superficial sand and gravel to 7.00m bgl over chalk to >37.5m bgl.

3.2 Radon

The subject site is indicated within the Envirocheck Report and the BGS Radon Indicative Atlas (2022) to be in an intermediate probability radon area, where 1 to 3% of dwellings are estimated to be above the radon action level. As such, no radon protective measures are considered necessary in the construction of buildings.

3.3 Hydrogeology, Hydrology and Site Sensitivity

Site specific sensitivity maps provided by Landmark Information Group are included within Appendix D and were referenced for the following sub-sections.

3.3.1 Hydrogeology

The superficial deposits are classified as a Secondary A aquifer and the bedrock strata across the site are classified as a principal Aquifer.

The site is not situated within a Groundwater Source Protection Zone (SPZ) and none are mapped within 1km of the site.

A total 14 no. groundwater abstractions are listed within 1km of the site. The nearest groundwater abstraction to the site is listed as licence number Th/039/0023/039, located 233m southeast for use as a heat pump.

Based on the foregoing, the groundwater vulnerability across the site is considered by Envirocheck to be ‘High’ on the basis of the underlying Secondary A and Principal Aquifer designations.

3.3.2 Hydrology

The Envirocheck Report indicates that there are 42no. permanent surface water features within 1km of the site boundary. The nearest recorded surface water feature is an unnamed inland river at 405m north of the site.

3.3.3 Ecological Receptors

No major ecological receptors are indicated to be present within 1km of the site.

3.4 Flood Risk

The flood map included in Appendix D indicates the site is located within flood zone 1 (< 1 in 1000 (0.1%) annual probability of flooding in any given year). Flood Zone 1 is the lowest risk classification with regards to flooding from rivers or the sea.

Further to the above, the site is shown to be at Low risk of flooding from surface water.

The BGS groundwater flood susceptibility mapping indicates the site is situated within an area with a potential for groundwater flooding to occur at the surface.

The above information does not constitute a flood risk assessment to be undertaken for the site.

4.0 UNEXPLODED ORDINANCE

Available online information and historic records indicate that the site is at a low risk of unexploded ordinance.

5.0 ENVIRONMENTAL DATABASE INFORMATION

A detailed database of environmental information is included within the Envirocheck report as included within Appendix D. The database includes Agency & Environmental, Waste management, Landfills, Hazardous Substances and industrial land uses. The main points of note within this database are presented in Table 1 below. All distances stated are approximate and positional accuracy may be to within 100m in some cases.

Table 1: Summary of Environmental Database Information

Hazard	No. of entries			Details of notable database entries	
	0-250m	251-500m	501-1,000m	Distance (m) & Direction from Site	Additional Information
Contaminated Land Register Entries and Notices	0	1	0	391 NW	George Street Allotments, George Street, Reading - Remediation Work Completed
Discharge Consents	0	6	20	-	None within 250m of the site

Contemporary trade directories,	34	84	341	14 to 989 in all directions	Various active and inactive trade directores including joinery Manufacturers, Tyre Dealers, garage service dry cleaners, Laundrettes, printers, glass makers, waste disposal, cable manufacturers, window frame manufacturers, sheet metal work, service centres, tool designers, mot testing, coach operators, electrical engineers, pest control and medical laboratories amongst others. The nearest active trade directory to the site is listed as Garage services at 29m north.
Fuel stations	1	3	5	107 E 355 W 384 W 423 SW 665 NW 703 NW 764 S 848 S 998 N	Welldale service station – obsolete Parsons garage – obsolete BP – open BP – open Cardiff Road Service Station – obsolete BRS -obsolete ESSO – open Save reading – obsolete BP – open

A review of the available information has identified limited potentially contaminative land uses within 500m of the site. Those identified are considered further in the initial Conceptual Site Model (CSM) presented in Section 9.0.

6.0 GEOTECHNICAL RISKS

The geotechnical risks that could impact the site and any shallow foundations present are listed below.

6.1 Ground Instability

A summary of potential ground stability risks associated with the underlying geology at the site, as detailed within the Envirocheck report is included within Table 2.

Table 2: Summary of Geotechnical Risk

Hazard	Assessed On-Site Risk (and area within 10m of the site)	
	Present	Level
Potential for Collapsible Ground Stability	✓	Very Low
Potential for Compressible Ground Stability	✗	No Hazard
Potential for Ground Dissolution Stability	✓	Low
Potential for Landslide Ground Stability	✓	Very Low
Potential for Running Sand Ground Stability	✓	Very Low
Potential for Shrinking or Swelling Clay	✗	No Hazard

The information in Table 2 indicates that the site is generally at worst case Low risk of being affected by ground instability arising from the geological conditions at the site. The information gained from the Landmark database, as detailed in Table 2, is information relating to natural bedrock strata, as such does not represent likely hazards from any potential Made Ground.

6.2 Mineral Extraction

The mining history of the site and surrounding area has been deduced primarily from information supplied within the Envirocheck Report along with a review of online Coal Authority mapping database.

The available information indicates that the site is not located within a Coal Mining Reporting Area. The consulted environmental database (Appendix D) lists 37 no. BGS recorded mineral sites, 26 no. manmade cavities and 44 no. natural cavities within 1km of the site. Those identified within 500m of the site are listed below.

BGS Recorded Mineral Sites

- Reading Chalk Mine open cast chalk quarry at 408m – 498m - ceased
- Neuk & Bramley Chalk Mine open cast chalk quarry at 500m - ceased

Man-Made Mining Cavities

- Possible Mine Workings/Ground Anomalies Ground Anomalies at 345m – 356m south
- Shaft Entry Mine Workings/Ground Anomalies at 357m south
- MINE GALLERY (EXTENT UNKNOWN) at 444m south
- Multiple Small-Scale Shaft Entry Pillar and Stall Workings at 452m south
- Possible Mine Workings/Ground Anomalies Ground Anomalies at 464m south
- Old Gravel Pit at 468m southwest

Natural Cavities

- Solution Pipe at 176m east
- Solution Widened Joint at 217m southeast
- Solution Pipes at 340m – 362m and 398m – 415m south

- Solution Widened Joints at 391m – 396m south
- Solution Widened Joint at 411m southeast
- Solution Pipe at 460m south

Based on the foregoing and given the distance and time lapsed regarding the potentially infilled land, the site is at low risk from hazards associated with mineral extraction and infilling.

7.0 HISTORIC LAND USE MAPPING SUMMARY

A review of the available historical maps, as included in the Envirocheck Report, has been carried out and is summarised in Table 3. The reviewed maps comprise County Series, Ordnance Survey Plans and Other Survey Information (at various scales). Maps covering the site were published between 1879 and 2024. The mapping data set is presented in Appendix C.

The maps are reproduced in accordance with Landmark Information Group Limited's Ordnance Survey License.

Any identified uses of the site and the surrounding area that are considered potentially contaminative are shown in ***bold italics***. The distances and directions from the site stated in Table 3 below are approximate.

Table 3: Historical Map Review

Date of mapping	Site History	History of the area surrounding the site
1879 (1:2,500) 1883 (1:10,560)	The southwestern portion of the site is shown to contain four terrace style residential properties with residential gardens extending northwards across the northwestern portion of the site. The eastern half of the site is shown to comprise an open soft landscaped wooded area.	The area surrounding the site is largely dense residential in all directions. A railway line is shown at 500m north and west of the site.
1899 (1:2,500) 1900 (1:10,560) 1901 (1:10,560)	No significant change.	A gravel pit is present at 750m northwest
1912 (1:2,500) 1913-1914 (1:10,560)	No significant change.	Some residential developments are shown from 500m west of the site which extend over the former gravel pit. A workhouse is shown adjacent to the residential properties at 1km west of the site.
1931 (1:2,500) 1932-1933 (1:10,560)	No significant change.	No significant change. The work house is now shown as 'Battle Hospital'
1957 (1:2,500) 1961-1962 (1:10,000)	The eastern half of the site is shown to have been developed into a warehouse.	No significant change.

Date of mapping	Site History	History of the area surrounding the site
1962-1971 (1:2,500) 1973-1976 (1:10,000)	The residential properties and associated gardens across the western half of the site are shown to have been demolished and a Wallpaper Warehouse is shown to have been built on the site.	By 1973 the area to the east of the site is shown to have been significantly redeveloped into largely a commercial area from the previous residential including up to the eastern site boundary. A new major public highway (A329) is shown to have been built 250m east of the site.
1977-1988 (1:2,500) 1979 (1:10,000)	No significant change.	No significant change.
1986 (1:2,500) 1990-1992 (1:10,000)	By 1990, all infrastructure across the site is shown to have been demolished and the site redeveloped into its existing form inclusive of two large commercial buildings around a central courtyard.	The Borad Street mall is now shown within the increasing commercial development at 200m southeast
1993 (1:2,500) 1995 (1:10,000)	No significant change.	No significant change.
1999 aerial (1:2,500) 1999 (1:10,000)	No significant change.	No significant change
2006 (1:10,000)	No significant change	No significant change
2024 (1:10,000)	No significant change	No significant change

7.1 Historical Mapping Summary

The earliest available map shows that by 1879 the southwestern portion of the site contained four terrace style residential properties with residential gardens extending northwards across the northwestern portion of the site. The eastern half of the site comprised an open soft landscaped wooded area. the eastern portion of the site was developed into a warehouse by 1957. The residential properties and gardens were redeveloped into an additional warehouse by 1971. The entire site was redeveloped into its existing layout by 1990.

By 1879 the area surrounding the site was largely developed as residential in all directions. The residential areas to the east of the site were largely redeveloped into commercial around 1973 with further progressive development into commercial until around 1990.

7.2 Planning Search

A search of Reading Borough Councils planning portal was undertaken for the site and the immediate surrounding area on the 19th February 2025. The aim of the search was to gather details of relevant planning applications.

A total 13 no. applications were identified onsite. These generally relate to the change of use of the site and redevelopment for residential inclusive of the most recent and current application. It is noted that the majority of historical application have been refused/rejected until the mot recent ain 2025. The application are summarised in Table 4.

No further details of onsite or off-site planning applications were available at the time of writing this report.

Table 4: Onsite Planning Application Search

Application number	Address	Application Details	Date
PL/14/0116	1 Opal Court Lower Field Road, Reading, RG1 6BW	Reduce trees overhanging garden back to boundary line.	08/01/2014

7.3 Summary of Environmental Search Data

The review of the available environmental data obtained from the Envirocheck Report, local planning authority and the site walkover survey, as detailed in the preceding sections of this report, have indicated the following potential risks from contamination within 500m of the site (or further if considered significant).

Current or Recent Land Uses

- Potential unknown Made Ground associated with existing structures and historical demolition on the site: **Low Risk;**
- Potential unknown Made Ground associated with historical development and demolition within the area surrounding the site: **Low Risk;**

Historical Land Uses

- Potential contamination associated the sites historical use for warehousing: **Low Risk;**
- Potential contamination associated with historical development in the area surrounding the site: **Low Risk.**

Site Environmental Features

- The superficial deposits beneath the site is classified as a Secondary A aquifer
- The underlying Bedrock strata is listed as a Principal Aquifer.
- The site is not located within a groundwater source protection zone.
- The closest surface water feature is an unnamed inland river at 405m north of the site.

8.0 Preliminary Conceptual Site Model and Risk Assessment

8.1 Risk Assessment Guidance

Guidance has been published by the Department of the Environment, Transport and the Regions (DEFRA) 'Environmental Protection Act 1990: Part 2A - Contaminated Land Statutory Guidance' (DEFRA April 2012) which promotes the 'risk-based approach' for defining contaminated land. The statutory guidance states:

"Part 2A takes a risk-based approach to defining contaminated land. For the purposes of this Guidance, "risk" means the combination of: (a) the likelihood that harm, or pollution of water, will occur as a result of contaminants in, on or under the land; and (b) the scale and seriousness of such harm or pollution if it did occur."

A means to assess the risk posed by potential contamination on or under a site is to carry out a preliminary contaminated land risk assessment. The risk assessment process if defined within the statutory guidance:

"For a relevant risk to exist there needs to be one or more contaminant- pathway-receptor linkages - "contaminant linkage" - by which a relevant receptor might be affected by the contaminants in question. In other words, *for a risk to exist there must be contaminants present in, on or under the land in a form and quantity that poses a hazard, and one or more pathways by which they might significantly harm people, the environment, or property; or significantly pollute controlled waters. For the purposes of this Guidance:*

(a) A "contaminant" is a substance which is in, on or under the land and which has the potential to cause significant harm to a relevant receptor, or to cause significant pollution of controlled waters.

(b) A "receptor" is something that could be adversely affected by a contaminant, for example a person, an organism, an ecosystem, property, or controlled waters. The various types of receptors that are relevant under the Part 2A regime are explained in later sections.

(c) A "pathway" is a route by which a receptor is or might be affected by a contaminant."

The contaminant linkage is described within the statutory guidance as:

"The term "contaminant linkage" means the relationship between a contaminant, a pathway and a receptor. All three elements of a contaminant linkage must exist in relation to particular land before the land can be considered potentially to be contaminated land under Part2A, including evidence of the actual presence of contaminants. The term "significant contaminant linkage", as used in this Guidance, means a contaminant linkage which gives rise to a level of risk sufficient to justify a piece of land being determined as contaminated land. The term "significant contaminant" means the contaminant which forms part of a significant contaminant linkage".

The following sections relate to a qualitative risk assessment of the site and surrounding environs.

The data within this assessment will be employed to produce a Conceptual Site Model which will be tested to assess if a 'significant possibility of significant harm' to human health, non-human health or significant pollution to controlled waters is likely to occur and the risk level posed by any such linkages. The risk level classification system employed in the risk assessment is generally based upon those described in CIRIA C552[1].

8.2 Potential Contaminant Sources

The potential contamination sources identified as part of this Preliminary Contamination Risk Assessment are summarised in the table below. The potential contaminants are based on the data within CL8, Department of the Environment (DoE) Industry Profiles, the current and historic site uses.

[1] Rudland, D., Lancefield, R.M., Mayal, P.N. (2001) Contaminated Land Risk Assessment: A Guide to Good Practice. CIRIA C552. UK.

Table 5: Potential Contamination Sources

Current Potential On-Site Contaminant Sources	Potential Contaminants
Potential unknown Made Ground associated with existing structures and historical demolition on the site	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH), asbestos and ground gas.
Historical Potential On-Site Contaminant Sources	**Potential Contaminants**
Potential contamination associated the sites historical use for warehousing	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH), asbestos.
Current Potential Off-Site Contaminant Sources	**Potential Contaminants**
Potential unknown Made Ground associated with historical development and demolition within the area surrounding the site	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH) and ground gas
Historical Potential Off-Site Contaminant Sources	**Potential Contaminants**
Potential contamination associated with historical development in the area surrounding the site	Inorganics (heavy metals and metaloids), Organics, hydrocarbons (PAH and TPH) and ground gas

8.3 Conceptual Source-Pathway-Receptor Model

The information gathered in this Preliminary Contamination Risk Assessment has been compiled to produce a Source-Pathway-Receptor (S-P-R) model for potential onsite and off-site contamination sources, these are summarised in the tables 5 and 6 below. A Contamination Conceptual Site Model Cross Section is presented in Appendix F.

The risk posed to site construction workers has not been assessed as any risks will be mitigated through good site practices such as dust suppression and the use of Personal Protective Equipment (PPE).

Table 6: Source-Pathway-Receptor Model for onsite sources

Potential Site Contaminant Sources	Potential Pathways	Potential Receptors	Pathway Complete	Risk Level Classification
Current Potential unknown Made Ground associated with existing structures and historical demolition on the site **Historical** Potential contamination	Dermal / direct contact	Current site users	No	
	Direct ingestion		No	
	Direct inhalation		No	
	Inhalation of Radon		No	
	Inhalation of wind-blown dust		No	
	Vapour migration		No	
	Ground gas migration		No	
	Dermal / direct contact	Future site users (residential)	No	
	Direct ingestion		No	
	Direct inhalation		No	

Potential Site Contaminant Sources	Potential Pathways	Potential Receptors	Pathway Complete	Risk Level Classification
associated the sites historical use for warehousing.	Inhalation of Radon gas		No	
	Inhalation of wind-blown dust		No	
	Vapour Migration onto the site		No	
	Ground gas migration		Yes	Low
	Direct contact	Services (following redevelopment)	Yes	Low
	Migration of contaminants: non-aqueous phase		Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low
	Migration of contaminants off-site: non-aqueous phase	Adjacent Properties	Yes	Low
	Migration of contaminants off site: aqueous phase		Yes	Low
	Vapour migration		Yes	Low
	Inhalation of wind-blown dust	Ecological Impacts	Yes	Low
	Migration of contaminants: non-aqueous phase		Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low
	Migration of contaminants from site: non-aqueous phase	Controlled groundwater	Yes	Low
	Migration of contaminants from site: aqueous phase		Yes	Low
	Migration of Contaminants: non-aqueous phase	Surface Waters	Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low

Table 7: Source-Pathway-Receptor Model for off-site sources

Potential Site Contaminant Sources	Potential Pathways	Potential Receptors	Pathway Complete	Risk Level Classification
Current Potential unknown Made Ground associated with historical development and demolition within the area surrounding the site **Historical** Potential contamination associated with historical development in the area surrounding the site	Dermal / direct contact	Current site users	No	
	Direct ingestion		No	
	Direct inhalation		No	
	Inhalation of Radon		No	
	Inhalation of wind-blown dust		No	
	Vapour migration		No	
	Ground gas migration		No	
	Dermal / direct contact	Future site users (residential)	No	
	Direct ingestion		No	
	Direct inhalation		No	
	Inhalation of Radon gas		No	
	Inhalation of wind-blown dust		No	
	Vapour Migration onto the site		No	
	Ground gas migration		Yes	Low
	Direct contact	Services (following redevelopment)	Yes	Low
	Migration of contaminants: non-aqueous phase		Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low
	Inhalation of wind-blown dust & Direct Contact	Ecological Impacts (Plants)	Yes	Low
	Migration of contaminants: non-aqueous phase		Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low
	Migration of contaminants from site: non-aqueous phase	Controlled groundwater	Yes	Low
	Migration of contaminants from site: aqueous phase		Yes	Low
	Migration of Contaminants: non-aqueous phase	Surface Waters	Yes	Low
	Migration of contaminants: aqueous phase		Yes	Low

9.0 POTENTIAL CONTAMINATION RISK SUMMARY

The preliminary contamination risk assessment has identified that a complete Source-Pathway-Receptor (SPR) linkages at the site is likely to exist as part of the proposed development with a worst-case **Low** risk level from potential sources of ground gas and risk drivers identified on the site and surrounding area.

There is the potential for the presence of inorganics, organics, hydrocarbons (PAH and TPH) in Made Ground at the site associated with historical uses and development on the site. However, given the significant redevelopment of the site around 1991, which included the construction of a basement, it is considered likely that any residual contamination associated with the historical demolition and use of the site for warehousing will have been removed.

Further to the above, given there are no significant structural changes or areas of proposed soft landscaping incorporated into the proposed design, any residual contamination will remain encapsulated below the existing building and is unlikely to come into contact with future site users.

Given these factors, there is considered to be a potentially complete S-P-R linkage between any potential sources of ground gas within the vicinity of the site through ground gas migration and inhalation pathways. However, the risk is considered to be lower bound. These potential contamination features are also deemed to pose a potential hazard to ecology and controlled waters, albeit with a very low risk level.

Based on the foregoing considerations, the site is considered to be at a sufficiently low potential risk of contamination that it is deemed suitable for the proposed development with no further contamination assessment works considered necessary.

Further to this, should any unexpected contamination be identified during the future development groundworks, then a suitably qualified and experienced Geo-Environmental Engineer should be consulted and if necessary further assessment should be undertaken.

CERTIFICATION

This report is produced for the sole use of the Client, and no responsibility of any kind, whether for negligence or otherwise, can be accepted for any third party who may rely upon it.

The site walkover survey was carried out within reasonably accessible areas of the site. No responsibility of any kind can be accepted for any conditions or features not identified due to inaccessibility of areas such as locked, unstable or unsafe buildings and heavily overgrown areas.

The conclusions and recommendations given in this report are based on our understanding of the future plans for the site and based on a scope of works agreed by the Client and afforded by the agreed budget. No responsibility is accepted for conditions not encountered, which are outside of the agreed scope of work.

If the future plans for the site are changed, such as the site is developed for a more or less sensitive use, then a different interpretation might be appropriate.

The report has been prepared following the guidelines and principles established in the British Standards, BS 10175:2011, entitled 'Investigation of Potentially Contaminated Sites – Code of Practice' and the DEFRA / EA Contaminated Land Reports CLR7 and CLR8. It necessarily relies on the co-operation of other organisations and the free availability of information and total access. No responsibility can, therefore, be accepted for conditions arising from information that was not available to the investigating team as a result of information being withheld or access being denied.

This report may suggest an opinion on a possible configuration of strata or conditions between exploratory points and below the maximum depth of investigation. However, this is for guidance only and no liability can be accepted for its accuracy.

04 DESIGN

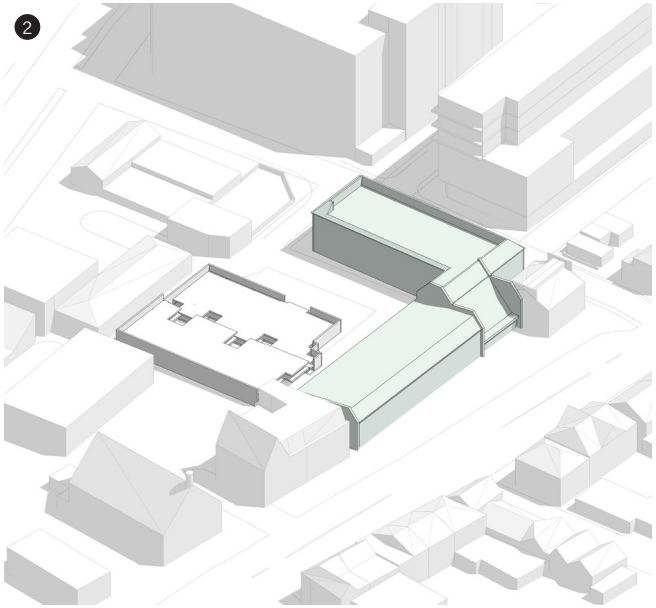

4.1 MASSING EVOLUTION

4.1.1 As shown below, the Class MA application relates solely to a change of use and does not alter the building's massing.

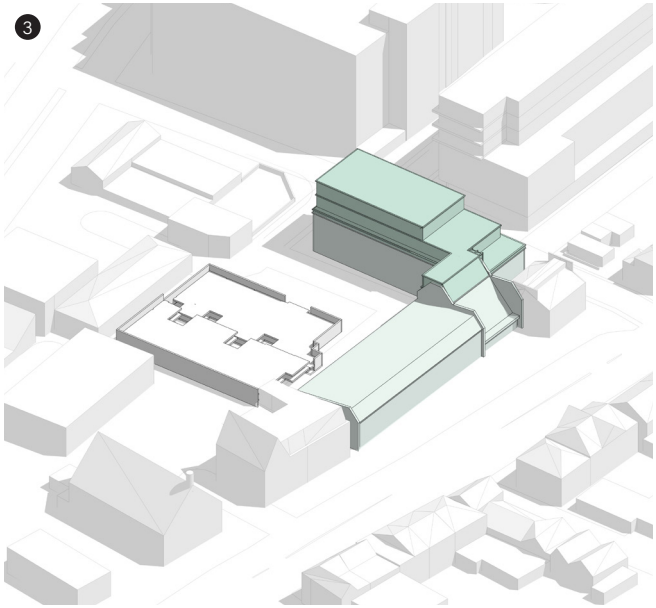

4.1.2 The proposed Class AA massing introduces two, stepped additional storeys above the existing three-storey element.

Existing Condition

Class MA Permitted Development

Class AA Permitted Development

Fig. 17 Massing Evolution

4.2 MASSING DEVELOPMENT

4.2.1 The full planning application proposes the addition of two storeys to the existing two-storey wing.

4.2.2 This creates a stepped massing away from the Royal Meteorological Society, as well as from Bond House to the west.

4.2.3 No changes are proposed to the car park located at the rear of the site.

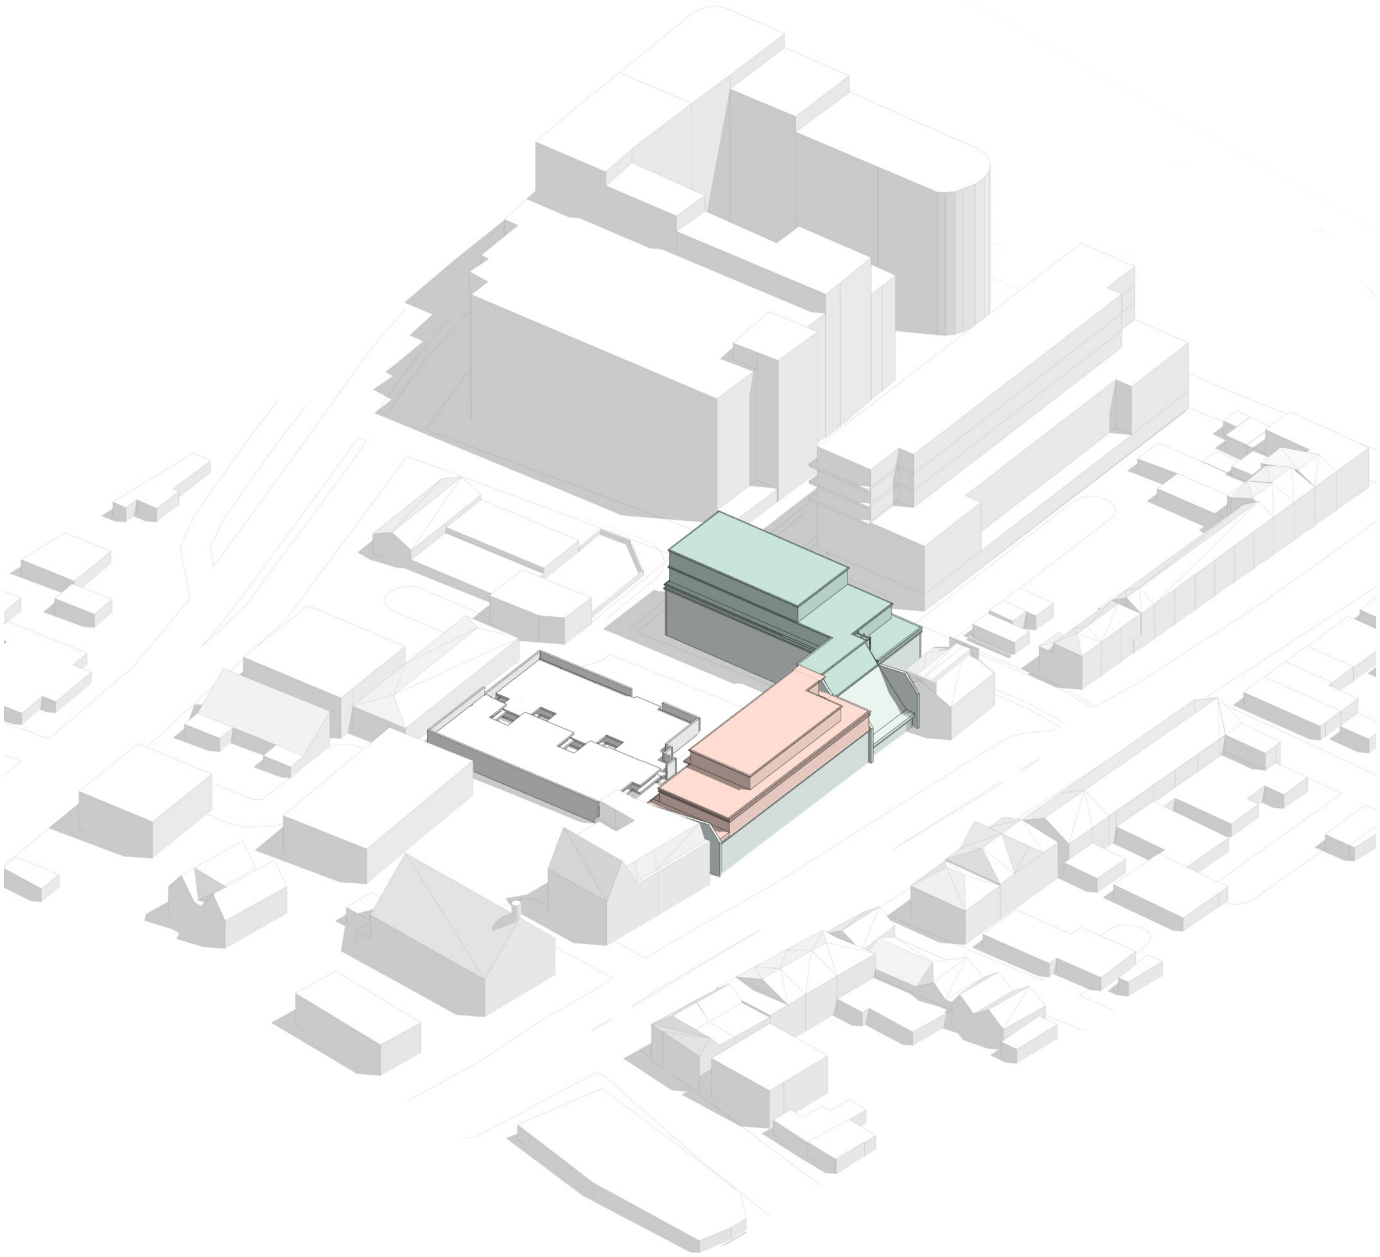

Fig. 18 Massing Refinement

4.3 SITE LAYOUT

4.3.1 The principles set out in the site strategy are developed further into our site layout illustrated in figure 19.

4.3.2 This includes the following:

1. Add two-storey extension, which is a storey lower than the Class AA wing.
2. Set back from residential properties on western boundary.
3. Step back front and rear to reduce impact and remove single-aspect north facing units where possible.
4. Retain and enhance trees and landscaping for biodiversity.
5. Provide secure cycle and refuse storage.
6. Proposed biodiverse green/brown roofs.

Fig. 19 Site Plan

4.4 GROUND FLOOR PLAN

4.4.1 The internal ground floor layout is unaffected by this planning application.

4.4.2 For further details on the change of use, refer to the permitted development Class MA application (application number PL/25/1025).

4.4.3 The allocated car parking spaces, highlighted in pink, provide a total of 10 spaces.

4.4.4 In total 41 parking spaces are available on the ground floor, which is sufficient to meet the requirements of all proposed developments. All parking is located at ground floor level.

4.4.5 A total of 42 cycle spaces are provided within a secure external storage area. Additionally, the bins are accommodated within two dedicated external stores.

Fig. 20 Ground Floor Plan

4.5 FIRST FLOOR PLAN

4.5.1 The first floor layout is unaffected by this planning application.

4.5.2 For further details on the change of use, refer to the permitted development Class MA application (application number PL/25/1025).

Fig. 21 First Floor Plan

4.6 SECOND FLOOR PLAN

4.6.1 The second floor proposes a mix of 7 dual-aspect residential units, accessed via a deck, along with associated amenity space.

4.6.2 The site strategy includes the following key points:

1. Levels align with the proposed Class MA wing of the building.
2. The residential units are accessed through an external deck, which wraps around the stair core to give a greater set back on the western boundary.
3. Align new staircase with existing stair on the floors below, for efficiency.
4. An additional lift has been added within the western circulation core.
5. Dedicated amenity space provided for residents.

4.6.3 Part of the site is part of the Class MA application. For further details on the change of use, refer to the permitted development Class MA application (application number PL/25/1025).

Fig. 22 Second Floor Plan

4.8 THIRD FLOOR PLAN

4.8.1 The third floor proposes 5 residential units, accessed via a deck, stepped back from the western boundary and existing buildings.

Fig. 23 Third Floor Plan

4.10 ACCOMMODATION SCHEDULE

4.10.1 This application proposes a total of 12 residential units across 2 floors, comprising a mix of 50% one-bedroom units, 33.3% two-bedroom units and 16.7% three-bedroom units.

4.10.2 The car parking figures show the spaces within the entire site.

4.11 PROPOSED SECTION

4.11.1 Figure 26 illustrates the two-storey proposed roof extension above the existing building.

4.11.2 The second floor has an increased floor to ceiling height to align with the levels of the three-storey wing of the building.

4.11.3 The extension includes deck access on both floors to eliminate single aspect north-facing apartments.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

PADDOCK GEO ENGINEERING

Artificial Ground and Landslip

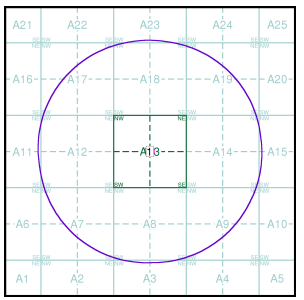

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

PADDOCK GEO ENGINEERING

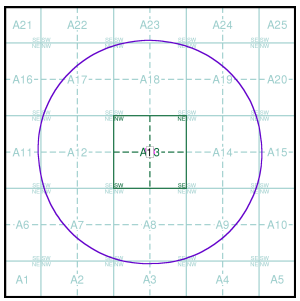

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

PADDOCK GEO ENGINEERING

Bedrock and Faults

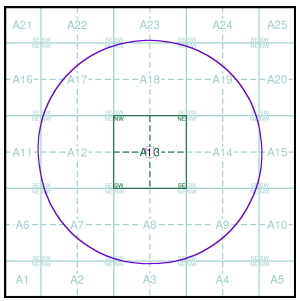

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

PADDOCK GEO ENGINEERING

Berkshire

Published 1883

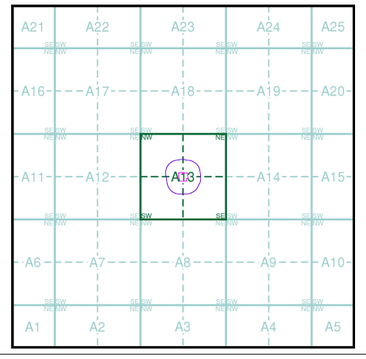

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

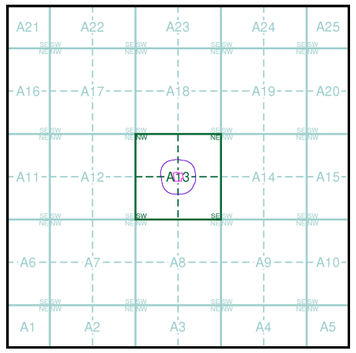

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2025

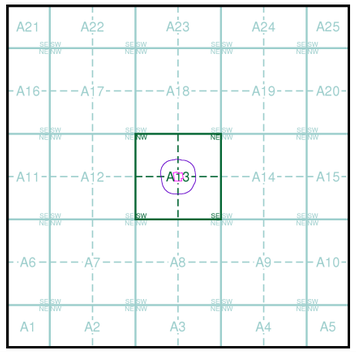

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

PADDOCK GEO ENGINEERING

Berkshire

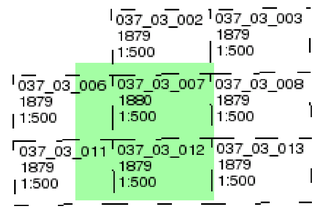

Published 1879 - 1880

Source map scale - 1:500

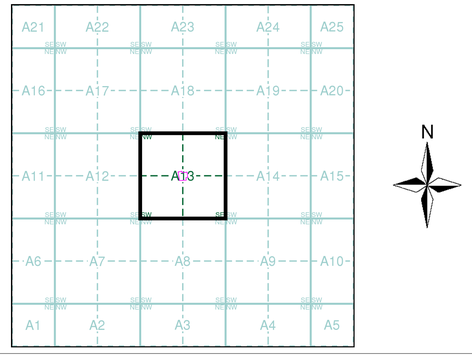

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Map Name(s) and Date(s)

SU7073NE 1993 1:1,250	SU7173NW 1993 1:1,250

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

APPENDIX F

Conceptual Model Cross Section

CONCEPTUAL CONTAMINATION GROUND MODEL

Offsite Potential Sources -

Current: Potential unknown Made Ground associated with historical development and demolition within the area surrounding the site

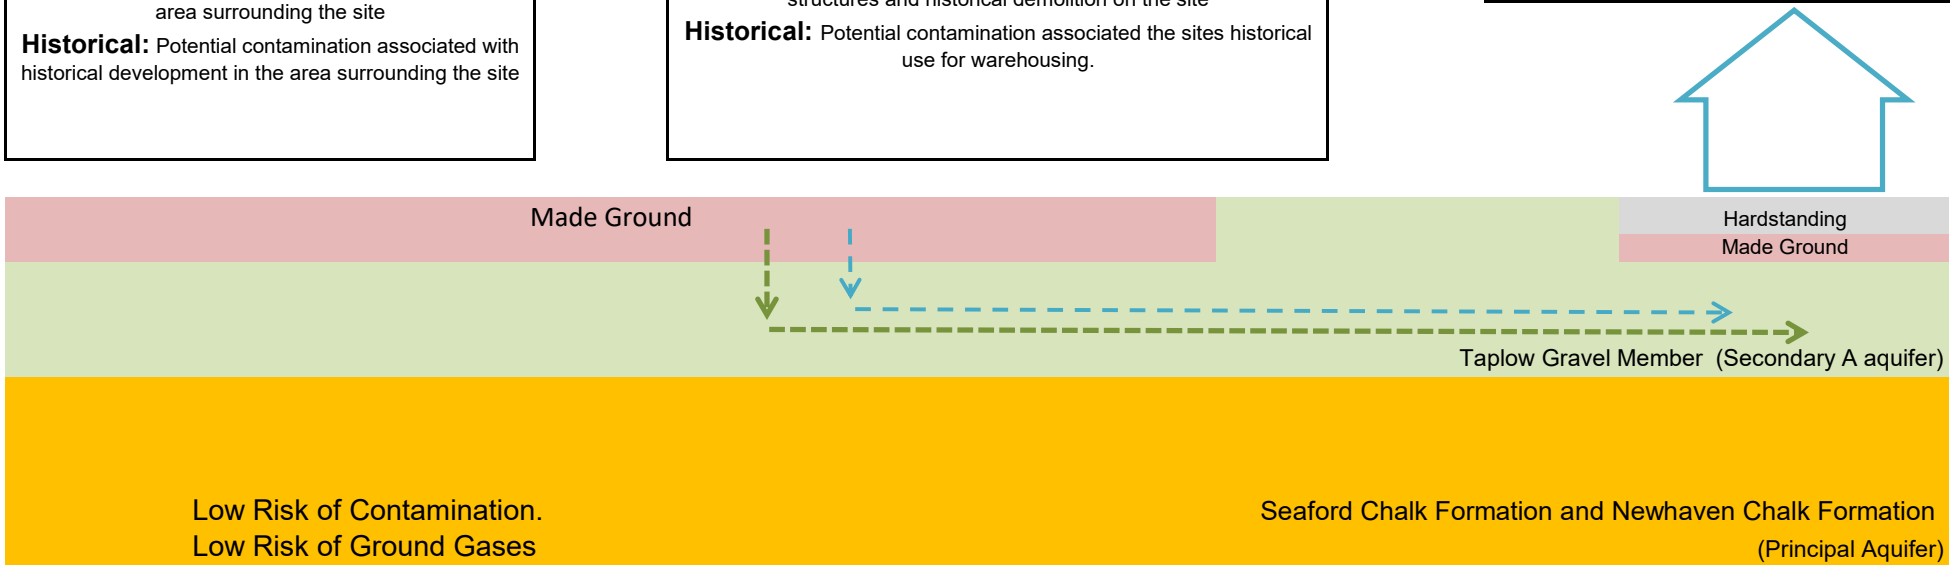

Historical: Potential contamination associated with historical development in the area surrounding the site

Onsite Potential Sources -

Current: Potential unknown Made Ground associated with existing structures and historical demolition on the site

Historical: Potential contamination associated the sites historical use for warehousing.

Proposed Residential Development

Potential Direct Contact or ingestion pathway

Potential Groundwater or Leachate migration pathway

Potential Hydrocarbon vapour and Ground gas pathway
