

21 LOWFIELD ROAD

Site access via front of house and front entrance.

Storing materials: In front of garage, front garden and back garden – all of them are outside of root areas.

To avoid disruption to the oak tree, we will use the front entrance to access the house. We plan to store materials in the space in front of the garage, at the front garden, as well as at the back of the garden—please refer to the picture with the arrow. All areas are outside the root zones of the fruit trees and the oak tree to ensure their safety.

For a detailed tree survey and tree protection plan, please review the separate document prepared by the tree surgeon. All recommendations outlined in the tree protection plan will be implemented before building work commences.
