2. EXECUTIVE SUMMARY

Abbey Consultants (Southern) Ltd have prepared this report on behalf of Bellway Homes Thames Valley to support the discharging of Reading Borough Council's condition 33 of the planning application (ref: 221324) for the development at 97a - 117 Caversham Road.

Planning permission (ref: 221324) for the development was granted by Reading Borough Council on 5th September 2023 subject to several conditions. This report responds solely to condition 33 which has been reproduced below for reference:

> *33.* The development hereby permitted shall not be occupied until written verification has been submitted *to and approved in writing by the Local Planning Authority demonstrating that all of the dwellings hereby permitted will achieve a minimum of a 35% improvement in the dwelling emission rate over the target emission rate, as defined in The Building Regulations for England Approved Document L1A: Conservation of Fuel and Power in New Dwellings (2013 edition) and a S106 contribution has been made to the Local Authority to account for any remaining emissions, such evidence will be in the form of an 'As Built' Standard Assessment Procedure (SAP) assessment, produced by an accredited energy assessor.*
>
> *REASON: To ensure that the development is carried out in accordance with sustainable building standards in accordance with Policy CC2 and H5 of the Reading Borough Local Plan 2019.*

In keeping with the requirements of condition 33, this report comprises of the following:

- A Building Regulation baseline energy assessment for the proposed development.
- Energy conservation measures to be undertaken in the design of the development.
- A calculation of CO_2 savings that are to be achieved as a result of energy efficiency measures.

The proposed site is to be built to Part L1 2021 of the Building Regulations, therefore SAP 10.2 methodology has been used for the energy assessment detailed within this report.

Planning condition 33 requires a minimum 35% improvement in Dwelling Emission Rate (DER) over the Target Emission Rate (TER) in accordance with Approved Document Part L1A 2013.

The development has been assessed in accordance with Approved Document Part L1 2021, which represents an approximate 31% improvement in carbon emission standards over the 2013 edition. The submitted 'As Built' SAP calculations confirm that the dwellings achieve a 48% improvement in DER over the TER under Part L 2021.

Given the increased stringency of Part L 2021, this level of performance significantly exceeds the intent of the planning condition. The requirement for a 35% improvement over Part L 2013 is therefore demonstrably met.

Table 1: Total CO_2 Savings: Compared against Part L1 2021 Baseline

Element	'As Built' SAP calculations (kg/CO_2/year)
Part L1 2021 Baseline	61.47
After Energy Hierarchy	31.83
Saving	**29.64**
Improvement	**48%**

In addition to the above, planning condition 33 requires the development to make a S106 contribution to the Local Authority to account for any remaining emissions.

The table above demonstrates that after all elements of the energy hierarchy have been accounted for, there is a carbon shortfall of 31.83 tonnes per year. This figure will therefore be used in calculating the required S106 contribution.

The calculation of the total S106 contribution is detailed below, has been calculated in accordance with the guidance detailed within the Council's Design and Construction Supplementary Planning Document (2019). The Council's S106 contribution is currently calculated at £60 per tonne over a 30-year lifetime of the development.

As detailed within the below table, the total proposed carbon offset payment will be £57,294.

Table 2: Calculation of S106 Contribution

Item	Details
Rate of carbon offset payment	£60 per tonne
Residual carbon for offset payment	31.83 tonnes per year
Timescale for carbon abatement	30 years
Total calculated carbon offset payment	**£60 x 31.83 tonnes x 30 years = £57,294**

A previous Energy & Sustainability Statement, prepared by AES and dated August 2022, forms part of the approved documentation for the planning permission that granted this development (ref: 221324). The AES report initially calculated the S106 contribution to be £48,419. This sum has previously been paid by Bellway Homes Thames Valley to Reading Borough Council. Therefore, this can be deducted from the total amount calculated in Table 2, which leaves a balance of £8,875 to be paid to the Council.

Energy Strategy Summary

The strategy achieves and meets the following requirements:

- Includes improved optimal building fabric improvements, energy efficient design of building services.
- Following the measures detailed within the energy hierarchy the proposed development will reduce carbon emissions by 69% when compared with Part L 2021 Building Regulations.
- In keeping with the requirements of Condition 33 the savings are in excess of 35% of a Part L1A 2013 baseline.
- S106 contribution of £57,294 to be made to account for the remaining emissions.

3. INTRODUCTION

This document has been prepared by Abbey Consultants (Southern) Ltd, a specialist environmental and independent energy consultancy on behalf of Bellway Homes, Thames Valley.

The following report establishes a baseline assessment of the energy demands and associated CO_2 emissions for the development. The energy hierarchy approach of Be Lean, Be Clean and Be Green is then followed to ensure the maximum viable reductions in energy and regulated CO_2 emissions is achieved.

The report takes into consideration the layout, use and requirements for the development and follows the strategy recommended in the Energy Strategy submitted to support the planning application. It shows that the requirements of Condition 33 of planning permission ref: 221324 have been met.

Figure 1: Site Plan

4. Planning Condition

The following report sets out the intentions of Bellway Homes, Thames Valley, with regards to energy, in order to discharge Reading Borough Council's condition 33 of planning permission ref: 221324.

The condition reads as below:

Condition 33

The development hereby permitted shall not be occupied until written verification has been submitted to and approved in writing by the Local Planning Authority demonstrating that all of the dwellings hereby permitted will achieve a minimum of a 35% improvement in the dwelling emission rate over the target emission rate, as defined in The Building Regulations for England Approved Document L1A: Conservation of Fuel and Power in New Dwellings (2013 edition) and a S106 contribution has been made to the Local Authority to account for any remaining emissions, such evidence will be in the form of an 'As Built' Standard Assessment Procedure (SAP) assessment, produced by an accredited energy assessor.

REASON: To ensure that the development is carried out in accordance with sustainable building standards in accordance with Policy CC2 and H5 of the Reading Borough Local Plan 2019.

5. Development Approach

The proposed energy strategy follows the established and widely accepted Energy Hierarchy of eliminate energy need (Be Lean), Use energy efficiently (Be Clean) and supply energy from renewable and low carbon sources (Be Green) to enable the maximum viable reductions in regulated and total CO_2 emissions over the baseline.

The proposed energy supply solutions aim to match energy profiles of the development ensuring effective use. The proposed solutions consider viability and flexibility of the scheme from both a technical and economic point of view by identifying best combination of energy efficiency measures as well as decentralised and renewable energy supply solutions.

Using these principles, Bellway Homes, Thames Valley will deliver the following objectives:

- Comply with the relevant regulatory requirements.
- Ensure that a reduction in CO_2 beyond Part L 2021 standards is achieved across the site through fabric and energy efficiency measures.
- To propose to reduce energy consumption and carbon dioxide emissions further through the use of on-site renewable or low and zero carbon technologies (LZC).

5.1 Carbon Conversion Factors

The report has been prepared using SAP 10.2 Building Regulation carbon conversion factors as detailed in the table below.

Table 3: Carbon conversion factors

Fuel Type	SAP 10.2 CO_2 Conversion Factors (kg/kWh)
Natural Gas	0.210
Grid Electricity	0.136

6. Energy Calculations

A baseline total energy demand has been established for the proposed development. Reductions in demand due to energy conservation measures are considered and form the basis of the energy strategy which follows.

Floor plans for the development have been used in conjunction with building specifications to prepare the 'As Built' SAP calculations to all units.

The 'As Built' SAP calculations have been carried out to Approved Document Part L1 2021. The relevant energy loads and associated CO_2 demand have been collated from the 'As Built' SAP calculation sheets, which can be found in the appendices.

Regulated Energy Demand is calculated from the energy associated with space heating, hot water and fixed electrical demands (for lights, fans and pumps).

Unregulated energy is the annual electrical energy demand from appliances. These are variable dependent on occupancy usage patterns and requirements. Therefore, they are not included within the main assessment of this energy strategy.

Energy savings are measured in terms of a reduction in CO_2 emissions and kWh, which are calculated from their association with a particular fuel source. CO_2 Conversion Factors have been taken from Table 12 of the SAP 10.2 methodology, which should be used for demonstrating compliance with Building Regulations Part L1 2021.

7. Passive Design and Energy Efficient Measures

In accordance with the Energy Hierarchy, the energy demands of the development should be reduced as much as practically viable. The desire is to achieve Part L1 2021 Building Regulations compliance before low carbon or renewable measures are introduced.

A range of measures to reduce CO_2 emissions and increase resilience to climate change are proposed in the building design including good building fabric standards as well as energy efficient M&E systems and lighting.

7.1 Passive design

'Passive design' is design that takes advantage of the climate to maintain a comfortable temperature range in the home. Passive design reduces or eliminates the need for auxiliary heating or cooling in the home. The importance of passive design cannot be overstated. Paying attention to the principles of good passive design suitable for the climate effectively 'locks in' thermal comfort, low heating and cooling bills, and reduced greenhouse gas emissions for the life span of the home.

The development incorporates a range of passive design measures and an energy efficient building fabric that reduces the demand for space heating, ventilation, and artificial lighting and negate the need for cooling.

Passive design utilises natural sources of heating and cooling, such as the sun and cooling breezes and consideration has been achieved by appropriately orientating the dwellings on the development and ensuring the specification of the building envelope is suitably robust. A well-designed building envelope minimises unwanted heat gain and loss.

Natural ventilation is considered the most appropriate method in this instance. The ventilation strategy has been reviewed to ensure compliance with all the relevant regulations and standards.

The proposed glazed areas have been designed to maximise daylight and optimise solar gains. The glazing specification has been reviewed to ensure that it provides an appropriate balance between solar control and solar gain.

7.2 BUILDING FABRIC

To reduce demand for space heating, emphasis has been placed on providing a very high standard of fabric efficiency and reducing heat loss through the building envelope. Approved Document Part L1 2021 sets out the limiting fabric parameters for each of the building elements. Each stated value represents the area-weighted average U-value. The following table details the as-built U-values in the described exposed element within the fabric of the development.

Table 4: 'As Built' Specification

Element	Maximum Allowable SAP 10.2	'As Built' Specification
Ground Floor	0.18 W/m^{2}K	0.12 W/m^{2}K
Exposed Floor	0.18 W/m^{2}K	0.12 W/m^{2}K
External Walls (houses)	0.26 W/m^{2}K	0.25 W/m^{2}K
External Walls (apartments)	0.26 W/m^{2}K	0.21 W/m^{2}K
Communal Walls	0.26 W/m^{2}K	0.25 W/m^{2}K
Party Wall	0.20 W/m^{2}K	0.00 W/m^{2}K
Roof – cold roof	0.16 W/m^{2}K	0.09 W/m^{2}K
Roof – flat	0.16 W/m^{2}K	0.12-0.13 W/m^{2}K
Windows	1.60 W/m^{2}K	Blocks A & B: 1.0 W/m^{2}K - G – 0.32 Block C: 1.2 W/m^{2}K - G – 0.44 Houses: 1.20 W/m^{2}K - G – 0.44
Doors	1.60 W/m^{2}K	1.20 W/m^{2}K

To further minimise heat loss through the building envelope, air leakage will be made a priority. The airtightness of the dwellings were set between levels of 2.00-4.50m^3/h/m^2. Such levels of airtightness, along with the proposed enhanced fabric measures, will increase comfort and warmth as well as save future residents money on energy bills.

Repeated thermal bridges such as timber studs or mortar joints are already covered by U-value calculations. Non-repeating thermal bridges are intermittent and occur at specific points in the construction. They are often caused by discontinuities in the thermal envelope. They commonly occur around openings and other instances where materials of different thermal conductivities form part of the external envelope.

Accredited construction details for all wall junctions will be specified to minimise the effects of non-repeating thermal bridging and reduce heat loss further. By specifying and ensuring that ACDs are designed into the build, CO_2 emissions can be reduced by up to 5%.

7.3 FABRIC ENERGY EFFICIENCY (FEE)

Using the specification detailed, the overall Part L (2021) Fabric Energy Efficiency (FEE) performance has been reviewed for and compared to the baseline stage of the energy hierarchy. The enhanced building fabric proposed by Bellway Homes, Thames Valley has improved upon Building Regulations by 3%. The results are shown in the following table.

Table 5: Residential FEE Performance

Element	Target Fabric Energy Efficiency (TFEE) kWh/m²/year	Dwelling Fabric Energy Efficiency (DFEE) kWh/m²/year	Improvement (%)
Development Total	38.17	36.87	3%

7.4 Building Services Energy Efficiency Measures

The building services and systems that have been employed within the dwellings are summarised in the following table.

Table 6: Summary of Building Services

8. RENEWABLES OR LZC TECHNOLOGY

As the houses are to be heated using Gas Boilers there is a requirement to include PV on the roof to ensure compliance with Part L1A 2021.

The following amount of PV has been included per house type.

Table 7: PV Quantity

House Type	Amount of PV (kWp)
End Terrace/Semi Detached	2.68
Mid Terrace	1.67
Plot 54	2.43

9. RESULTS & CONCLUSIONS

The energy strategy detailed within this report has followed the accepted Energy Hierarchy of 'Be Lean', 'Be Clean' and 'Be Green'.

The proposed site is to be built to Part L1 2021 of the Building Regulations, therefore SAP 10.2 methodology has been used for the energy assessment detailed within this report.

Planning condition 33 requires a minimum 35% improvement in Dwelling Emission Rate (DER) over the Target Emission Rate (TER) in accordance with Approved Document Part L1A 2013.

The development has been assessed in accordance with Approved Document Part L1 2021, which represents an approximate 31% improvement in carbon emission standards over the 2013 edition. The submitted 'As Built' SAP calculations confirm that the dwellings achieve a 48% improvement in DER over the TER under Part L 2021.

Given the increased stringency of Part L 2021, this level of performance significantly exceeds the intent of the planning condition. The requirement for a 35% improvement over Part L 2013 is therefore demonstrably met.

The following tables details the total carbon emissions based on the 'As Built' SAP calculations.

Table 8: Summary of Results

Element	'As Built' SAP calculations (tonnes/CO_2/year)
Part L1 2021 Baseline	61.47
After Energy Hierarchy	31.83
Saving	**29.64**
Improvement	**48%**

In addition to the above, planning condition 33 requires the development to make a S106 contribution to the Local Authority to account for any remaining emissions.

The table above demonstrates that after all elements of the energy hierarchy have been accounted for, there is a carbon shortfall of 31.83 tonnes per year. This figure will therefore be used in calculating the required S106 contribution.

The calculation of the total S106 contribution is detailed below, has been calculated in accordance with the guidance detailed within the Council's Design and Construction Supplementary Planning Document (2019). The Council's S106 contribution is currently calculated at £60 per tonne over a 30-year lifetime of the development.

As detailed within the below table, the total proposed carbon offset payment will be £4,347.

Table 9: Calculation of carbon offset payment

Item	Details
Rate of carbon offset payment	£60 per tonne
Residual carbon for offset payment	31.83 tonnes per year
Timescale for carbon abatement	30 years
Total calculated carbon offset payment	**£60 x 31.83 tonnes x 30 years = £57,294**

SAP 10 WORKSHEET FOR New Build (As Designed) (Version 10.2, February 2022)
CALCULATION OF ENERGY RATING FOR IMPROVED DWELLING

1. Overall dwelling characteristics

	Area (m2)		Storey height (m)		Volume (m3)	
Main dwelling						
Ground floor	51.8600 (1b)	x	2.5500 (2b)	=	132.2430	(1b) - (3b)
Total floor area TFA = (1a)+(1b)+(1c)+(1d)+(1e)...(1n)	51.8600					(4)
Dwelling volume			(3a)+(3b)+(3c)+(3d)+(3e)...(3n)	=	132.2430	(5)

2. Ventilation rate

	m3 per hour		
Number of open chimneys	0 * 80 =	0.0000	(6a)
Number of open flues	0 * 20 =	0.0000	(6b)
Number of chimneys / flues attached to closed fire	0 * 10 =	0.0000	(6c)
Number of flues attached to solid fuel boiler	0 * 20 =	0.0000	(6d)
Number of flues attached to other heater	0 * 35 =	0.0000	(6e)
Number of blocked chimneys	0 * 20 =	0.0000	(6f)
Number of intermittent extract fans	0 * 10 =	0.0000	(7a)
Number of passive vents	0 * 10 =	0.0000	(7b)
Number of flueless gas fires	0 * 40 =	0.0000	(7c)
	Air changes per hour		
Infiltration due to chimneys, flues and fans = (6a)+(6b)+(6c)+(6d)+(6e)+(6f)+(6g)+(7a)+(7b)+(7c) =	0.0000 / (5) =	0.0000	(8)
