Dear Paul,

RE: Units 10-12, Rose Kiln Lane, Reading, RG2 0JJ – Ground Gas Risk Assessment

Introduction and Background

Fairhurst has been commissioned by DTZ Investors to provide geo-environmental consultancy services in relation to the proposed refurbishment of the existing commercial Units 10-12, Rose Kiln Lane, Reading, RG2 0JJ.

A planning application has subsequently been submitted for the proposed refurbishment. During consultation, the Council's Environmental Protection Team identified the site's location within a 250 m landfill buffer zone and requested an assessment of the potential ground gas risk.

This letter has therefore been prepared to assess the potential ground gas risk to the existing development and determine whether the proposed refurbishment materially alters that risk.

Proposed Development

The proposed development comprises refurbishment of the units comprising of external alterations and yard reconfiguration and all associated. No extensions, alterations to existing ground levels, groundworks, new or replacement floor slabs, or additional enclosed areas are proposed. The existing ground-bearing floor slabs will be retained and existing ventilation arrangements are understood to remain materially unchanged.

Ground Conditions

Published geological information indicates that the site is underlain by Alluvium, described as “normally soft to firm consolidated, compressible silty clay, but can contain layers of silt, sand, peat and basal gravel” (BGS Lexicon Description).

The Alluvium overlies the Seaford Chalk Formation and Newhaven Chalk Formation, generally described as “firm white chalk with conspicuous semi-continuous nodular and tabular flint seams” (BGS Lexicon Description).

Available BGS borehole records located to the southwest of the site indicate some lateral variability within the shallow deposits, as summarised below:

- SU77SW511 – records approximately 0.3m of topsoil, underlain by soft clay to approximately 4.0 m bgl, with Chalk thereafter. Groundwater was recorded at approximately 1.8mbgl;
- SU77SW540 – records approximately 0.3m of sandy topsoil, over soft silty sandy clay to approximately 1.5mbgl, underlain by grey sand and gravel to approximately 4.3mbgl, with firm Chalk thereafter. A standing groundwater level of approximately 1.2mbgl was recorded; and
- SU77SW541 – records approximately 0.3m of sandy topsoil, over soft to very soft clay to approximately 3.05mbgl, underlain by sand and gravel to approximately 4.27mbgl, with firm Chalk thereafter. A shallow standing groundwater level was recorded at approximately 1.2mbgl.

The recorded ground conditions suggest a thickening granular component underlying the Alluvium moving towards the river; water levels within the boreholes record the granular component and portions of the Alluvium to be saturated.

Planning Portal Review – PL/25/1188

A Phase II ground investigation undertaken at 220 Elgar Road South (PL/25/1188), located approximately 10m east of Waterloo Meadows and on the opposite side of the former landfill from the subject site, has been reviewed. The investigation identified Made Ground to a maximum depth of approximately 3.0mbgl, underlain by interbedded cohesive and granular deposits of the Lambeth Group, with Chalk encountered at approximately 4.3 to 5.3mbgl. Groundwater was encountered at relatively shallow depths.

The investigation identified the nearby historical landfill/infilled land (Waterloo Meadows), together with Made Ground present beneath the Elgar Road site, as potential sources of ground gas. Ground gas monitoring was undertaken within installations principally screened within the Lambeth Group, comprising both spot monitoring and four weeks of continuous monitoring. The principal results are summarised in Table 1, below.

Table 1. Summary of ground gas monitoring and gas screening values from Elgar Road South (PL/25/1188)

Strata	Location	CH_4(%v/v)	CO_2(% v/v)	Gas flow (l/hr)	CH_4 GSV (l/hr)	CO_2 GSV (l/hr)	Characteristic Situation
Lambeth Group	BH1	0.20	4.30	<0.1	0.0002	0.0043	CS1
Lambeth Group	BH2	0.10	1.80	0.1	0.0001	0.0018	CS1

The ground gas monitoring results were assessed in accordance with BS 8485:2015+A1:2019 using calculated Gas Screening Values (GSVs). As summarised in Table 1, the maximum calculated methane and carbon dioxide GSVs were 0.0002 l/hr and 0.0043 l/hr, respectively, with the monitoring data indicating a very low ground gas risk equivalent to Characteristic Situation 1 (CS1).

The low GSVs, methane concentrations and very low gas flow rates provide useful local evidence of the present-day ground gas regime adjacent to the historical Waterloo Meadows landfill.

Environmental Data

An updated Envirocheck environmental report, together with available historical information, has been reviewed to identify potential ground gas sources within the vicinity of the site.

Waterloo Meadows Historical Landfill

The closest recorded historical landfill is Waterloo Meadows, approximately 179m east of the site, recorded as having received inert and industrial waste. The environmental database does not provide dates of first or last waste input, detailed waste composition or information regarding landfill capping.

Historical information indicates that the Waterloo Meadows area was formerly used as a council tip before subsequent use as allotments and recreation land. The Waterloo Meadows allotments were established by approximately 1963 on land previously recorded as landfill, indicating that at least part of the landfill had ceased receiving waste more than 60 years before present.

Other Potential Ground Gas Sources

Other historical landfills are recorded between approximately 471 and 779m from the site. An area of potentially infilled land is also recorded approximately 214m east of the site, described as “Unknown Filled Ground (Pit, Quarry etc)”. No information has been identified indicating significant gas-generating material within this feature.

Ground Gas Sources

The principal potential ground gas source is the Waterloo Meadows historical landfill. Although the detailed waste composition is unknown, the landfill is recorded as having received inert and industrial waste, with historical evidence indicating that at least part had ceased receiving waste more than 60 years ago.

CIRIA C665 Figure 7.1 illustrates the general relationship between landfill gas generation and time, with generation typically declining as deposited waste ages. Given the age of Waterloo Meadows, any degradable materials are considered likely to be beyond their period of peak gas generation, with substantially reduced residual generation anticipated.

This is supported by monitoring at 220 Elgar Road South, adjacent to Waterloo Meadows, where maximum methane of 0.20%v/v and positive gas flow of 0.10l/hr were recorded. Whilst not directly representative of the subject site, these low values provide supporting local evidence of limited present-day methane generation and migration.

Other historical landfills and potentially infilled land are not considered significant potential sources due to their greater separation from the site and, in some cases, the recorded receipt of inert material only.

Ground Gas Migration Pathways

Potential ground gas migration from Waterloo Meadows would require lateral movement across approximately 179m of intervening ground, including the River Kennet and associated alluvial corridor.

BGS borehole records indicate variable cohesive Alluvium with local granular horizons, underlain by Chalk in the vicinity of the site; no ground investigation information is available for the site. Groundwater is shallow, with granular horizons recorded to be below groundwater level in historical boreholes, limiting their potential to provide pathways for gas-phase migration.

Although granular horizons and underground services may provide local preferential pathways, no direct or continuous pathway to the existing buildings has been identified. The intervening River Kennet, shallow groundwater and predominantly cohesive Alluvium further restrict the potential for lateral migration.

This is supported by the low methane concentrations and very low gas flows recorded immediately adjacent to Waterloo Meadows at 220 Elgar Road South.

On this basis, a viable pathway for significant lateral migration of landfill gas to the site has not been identified.

Ground Gas Risk Assessment

The existing commercial buildings comprise the potential receptor. Waterloo Meadows represents a potential offsite ground gas source; however, the available evidence indicates a reduced present-day gas-generation potential and no viable pathway for lateral migration to the site has been identified. A complete and significant source–pathway–receptor linkage is therefore not considered to be present.

The proposed refurbishment will not introduce a new receptor or alter the existing ground-to-building interface, as no groundworks, replacement floor slabs, extensions or additional enclosed accommodation are proposed. Existing ventilation arrangements are also understood to remain materially unchanged. The proposed works are therefore not considered to materially alter the existing ground gas risk.

Conclusion

The assessment has not identified a complete and significant ground gas pollutant linkage between the Waterloo Meadows historical landfill and the existing commercial buildings.

The proposed refurbishment will not alter the existing ground-to-building interface or materially change building ventilation and is therefore not considered to create a new pollutant linkage or materially alter the existing ground gas risk.

On this basis, the potential ground gas risk to the proposed refurbishment is considered to be very low.

Recommendations

Intrusive ground investigation or additional gas protection measures are not considered proportionate to the nature and scope of the proposed refurbishment.

Should the development proposals subsequently change to include groundworks, replacement of ground-bearing floor slabs, extensions, additional enclosed accommodation or a material reduction in building ventilation, the ground gas risk should be reviewed.

Yours sincerely,

Michael Coleman

Published 1883

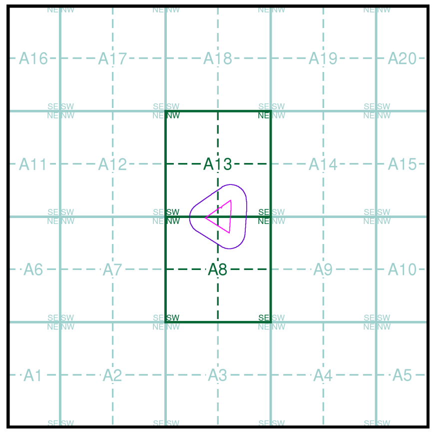

Source map scale - 1:10,560

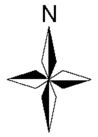

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

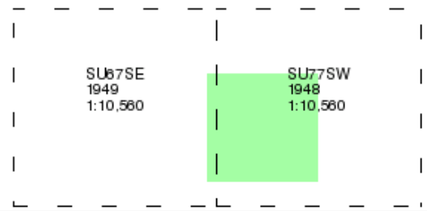

Published 1948 - 1949

Source map scale - 1:10,560

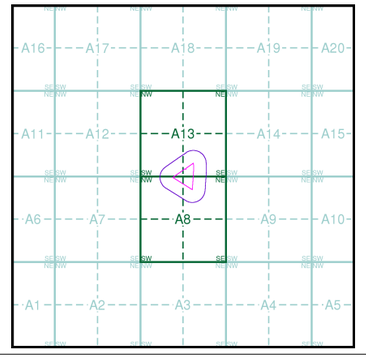

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Reading

Published 1990

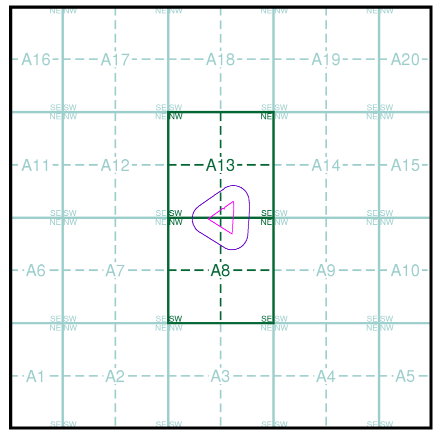

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2026

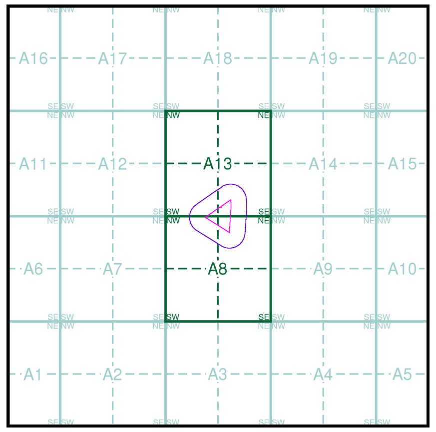

Source map scale - 1:10,000

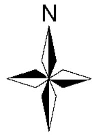

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1993

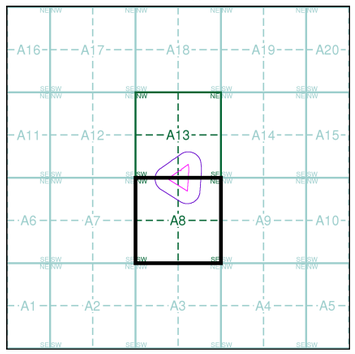

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Berkshire

Published 1931 - 1932

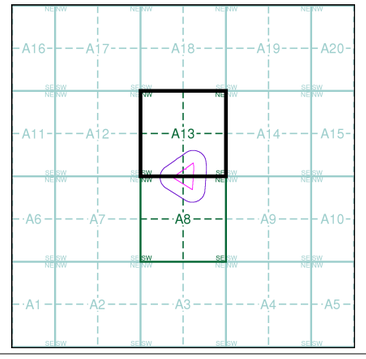

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1973

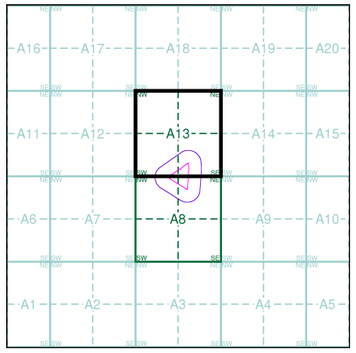

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1993

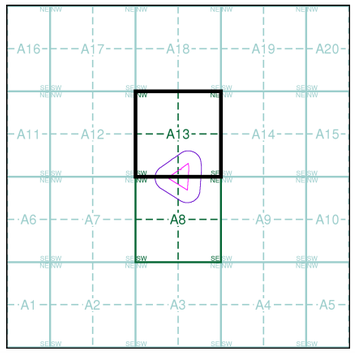

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Summary

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 1		5	3	30
Prosecutions					
Enforcement and Prohibition Notices					
Integrated Pollution Controls					
Integrated Pollution Prevention And Control	pg 11			1	
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 11	1	1	4	14
Local Authority Pollution Prevention and Control Enforcements					
Nearest Surface Water Feature	pg 14	Yes			
Pollution Incidents to Controlled Waters	pg 14	1	10	16	26
Historical Prosecutions					
Registered Radioactive Substances					
Substantiated Pollution Incident Register	pg 23			1	
Water Abstractions	pg 23			1	25 (*25)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 36	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 36	2	n/a	n/a	n/a
Groundwater Vulnerability - Local Information			n/a	n/a	n/a
Bedrock Aquifer Designations	pg 36	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 36	Yes	n/a	n/a	n/a
Source Protection Zones					
EA Flood Zones 2 & 3 (NaFRA2)	pg 36	Yes	n/a	n/a	n/a
TAN15 Defended Zones				n/a	n/a
Reduction in Risk of Flooding from Rivers and Sea due to Defences	pg 37	Yes	Yes	n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences	pg 37		Yes	n/a	n/a
EA Risk of Flooding from Surface Water - Present Day (NaFRA2)	pg 38	Yes	n/a	n/a	n/a
OS NGD Water Network Links	pg 42	2	24	45	97
Water Framework Directive - Catchment	pg 61	Yes	Yes		Yes
Water Framework Directive - Groundwater	pg 62	Yes		Yes	
Water Framework Directive - Surface Waters	pg 62		Yes		Yes

Waste					
Recorded Historical Waste Disposal Sites (1973 Survey)					
Historical Landfill Sites	pg 63		1	1	3
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)	pg 64				1
Local Authority Landfill Coverage	pg 64	1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites	pg 64				1
Potentially Infilled Land (Non-Water)	pg 64		1	5	3
Potentially Infilled Land (Water)	pg 64	1	6	5	8
Registered Landfill Sites	pg 66				1
Registered Waste Transfer Sites					
Registered Waste Treatment or Disposal Sites					
Waste Exemption Permits	pg 66		1	8	10
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)	pg 70				1
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents	pg 70				4
Planning Hazardous Substance Enforcements

Geological					
BGS 1:625,000 Solid Geology	pg 71	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 71	Yes	Yes	Yes	Yes
BGS Recorded Mineral Sites	pg 72			15	51
BGS Urban Soil Chemistry					
BGS Urban Soil Chemistry Averages					
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas			n/a	n/a	n/a
Mining Instability	pg 83	Yes	n/a	n/a	n/a
Man-Made Mining Cavities	pg 83			4	28
Natural Cavities	pg 89				32
Non Coal Mining Areas of Great Britain	pg 93		Yes	n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 93		Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 93	Yes		n/a	n/a
Potential for Ground Dissolution Stability Hazards	pg 93	Yes	Yes	n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 94	Yes		n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 94	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 94	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 96	4	38	74	231
Fuel Station Entries	pg 125		2	1	3
Points of Interest - Commercial Services	pg 125	1	2	25	66
Points of Interest - Education and Health	pg 133				5
Points of Interest - Manufacturing and Production	pg 134	2	2	25	137
Points of Interest - Public Infrastructure	pg 147		5	4	19
Points of Interest - Recreational and Environmental	pg 150		2	3	15
Pollution Inventory					
Underground Electrical Cables

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.
